THE HOUSES IN BRIDGE-STREET, WESTMINSTER. In reply to a question put in the House of Commons by Sir J. Shelley, as to the houses left standing on the south side of Bridge-street, Westminster, Mr. Cowper said, the freehold had been purchased, and he was now in negotiation for the purchase of the leasehold interest. The houses would shortly be taken down, and then would be the time to decide on the appropriation of the site.

EXTRA PAYMENTS TO SKILLED WORKMEN.—In a case (Podger *v.* Parkinson) recently tried at the Clerkenwell County Court, a gas apparatus manufacturer's skilled workman obtained a verdict for extra wages in the form of a bonus of 5*l.* per annum promised in an emergency by the then manager of the works, who afterwards left the defendant's employment in consequence of misunderstanding with him. The manager had acted for the widow of the previous manufacturer and her son, who was then eighteen years of age; and the son now resisted the demand of the plaintiff. The workmen had left the employment and the business was imperilled, which led the manager to offer bonuses to induce the workmen to return. The magistrate, in finding for the plaintiff with full costs, expressed his surprise and regret at the line of defence set up, which comprised a futile attempt to damage the character of the manager, as well as to resist payment of the promised bonus.

NEW FRENCH LOCOMOTIVES.—At the last sitting of the Academy of Sciences, M. Combes described a new system of locomotives now in use on the Northern Railway, so constructed as to surmount considerable declivities, and to work on curves of a small radius. These engines have four cylinders and six axletrees, divided into two groups of three each, moved by the pistons of one pair of cylinders. The wheels are so small, that the fireplace of the boiler extends beyond them. In order to facilitate the movement on small curves, a little play is left between the flanges of the wheels which keep the train within the rails, and the rails themselves; moreover, the axles have some play in their sockets. The new engines are said to have mounted gradients of 25 millimetres, and described curves of 80 metres' radius.

CHRISTIAN ART: MINIATURES.—Miniatures have a special interest to us as affording the only evidence of a remarkable era in the art-history of these islands, and of the influence of northern artistic culture generally; and therefore it is that we have in this paper dwelt at somewhat disproportionate length on the Anglo-Saxon and British schools. Of late years this subject has been investigated by many inquirers, but most deeply and patiently by Mr. Westwood, who is preparing for publication a history of Anglo-Saxon miniatures and illuminated manuscripts. Printing was discovered about the middle of the fifteenth century. It was long before the wealthy and the pious ceased to order the exquisitely written and illuminated books to which they had been accustomed. To meet the tastes of the richer purchasers, expensive books were at first printed to resemble as nearly as possible the written manuscripts, spaces being left for initials and miniatures to be filled in by hand. But this transition stage passed away. The superior advantages of printed books became generally recognised. The illuminator and miniaturist were more rarely employed, and no young scholars stepped in to fill the vacancies left by their seniors. One of the latest illuminated manuscripts executed in England was the Lectionary of Cardinal Wolsey, now preserved at Christ Church College, Oxford. The latest of an important kind produced on the Continent, is believed to be a large and splendid Graduale, preserved at Rouen, which was executed in the seventeenth century by a monk named D'Eaubonne, who is said to have spent the greater part of his life in its production.—*Churchman's Family Magazine.*

TENDERS.

For houses to be built at Clapton, for the Cannock Chase and Ogley Land Company. Mr. Charles Hambridge, architect:—

Hill & Keddle	£13,073 0 0
Myers & Sons	12,934 0 0

NOTE.—*The responsibility of signed articles, and papers read at public meetings, rests, of course, with the authors.*

ART MANUFACTURE.—"We have selected an engraving three of the watch-cases, of which a large variety is exhibited by Mr. Benson, of Ludgate-hill, in the large and prominent erection that it contains his monster clock. To this department of art-manufacture Mr. Benson has paid special attention."—*Art Journal*, August, 1862.

Chronometer, duplex, lever, horizontal, repeaters, three seconds, keyless, split seconds, and every description of watch, adapted to all climates. Benson's Illustrated Pamphlet on Watches (free by post for two stamps) contains a short history of watch-making, with prices from 3 to 200 guineas. It acts as a guide in the purchase of a watch, enables those who live in any part of the world to select a watch, and have it sent safe by post. Prize Medal and Honourable Mention, Classes 33 and 15.—J. W. Benson, 33 & 34, Ludgate-hill, London. Established 1749. Watch and Clock Maker by Special Warrant of Appointment to H.R.H. the Prince of Wales.

ADVERTISEMENTS.

The Publisher cannot be responsible for ORIGINAL TESTIMONIALS *left at the Office in reply to advertisements, and strongly recommends that* REFERENCES ONLY *should be sent.*

HALL, SMART, & ALLEN, 25, Paternoster-row.

KELLY'S PRACTICAL BUILDERS' PRICE-BOOK; or, Safe Guide to the Valuation of all kinds of Artificers' Work; with the Modern Practice of Measuring, and an abstract of the New Building Act for regulating the Construction of Buildings. Revised and Corrected by New Calculations upon the present Value of Materials and Labour. Arranged by a Practical Surveyor, of eminence, assisted by several experienced Measuring Surveyors. Illustrated and exemplified by Steel Engravings and numerous Woodcuts. Royal 8vo. price 8s. neatly bound.
London: published by T. KELLY, Paternoster-row; SIMPKIN and MARSHALL; and may be had of all Booksellers.
Of whom may be had, New Fifth Annual Quarto of the following Practical Architectural Works:—

1. **PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET MAKING,** Revised by TREDGOLD: being a new and complete System of Lines, for the Use of Workmen; founded on Geometrical and Mechanical Principles. Ten parts at 3s. or in boards, 36s; containing upwards of 120 Steel Plates, and numerous Woodcut Diagrams.

2. **PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING** (revised by TREDGOLD), both plain and ornamental; containing a new and complete System of Lines for Stone Cutting, for the Use of Workmen; the Formation of Mortars, Cements, Concrete, to which is added a variety of new designs for Mural Tablets, Tombs, Gravestones for Cemeteries, &c. &c.; and a description of the various materials employed. Ten Parts at 3s. or in boards, 30s.; containing upwards of Ninety Steel Plates and Numerous Woodcuts.

3. **TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise** on the FIVE ORDERS of ARCHITECTURE: containing plain and simple Rules for Drawing and Executing them in the purest style; including an historical Description of Gothic Architecture. Illustrated by upwards of One Hundred Steel Engravings, executed by Artists of first-rate talent, including numerous Diagrams, &c. Twelve parts at 3s.; or in boards, 36s.

4. **DESIGNS for COTTAGE and VILLA ARCHITECTURE:** containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By S. H. BROOKS, Architect. Beautifully engraved on steel, with Directions for Building, and the estimated Cost of each Edifice. Twelve parts at 3s.; or in boards, 36s.

5. **DESIGNS for PUBLIC BUILDINGS,** consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, and other buildings for public purposes. By S. H. BROOKS, Architect. Beautifully engraved on steel. Ten Parts, at 3s. or 30s. in boards.

6. **THE HOUSE DECORATOR and PAINTER'S GUIDE:** containing a series of Designs for Decorating Apartments with taste, and suited to the various styles of Architecture. By H. W. and A. ARROWSMITH, House Decorators to her Majesty. Ten Parts, at 3s.; or in boards, 32s.

7. **THE HOUSE PAINTER, or DECORATOR'S COMPANION:** containing a complete Treatise on the Art of House Painting, Graining, and Marbling; including the Origin of Colour, the Laws of Harmony in Colouring, the Manufacture of Pigments, Oils, Varnishes, &c. By W. N. HIGGINS, Esq. Accompanied by actual Specimens of Hand-Brush Graining and Marbling. Ten Parts, at 3s.; or in boards, 32s.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every description of Manufacture of the British Empire. Illustrated by upwards of 2,000 Wood Engravings. By LUKE HERBERT, Civil Engineer, &c. The rapid progress of Mechanical Science has developed many of the important facts since the first publication, in 1853, of the Encyclopædia. The inventions and discoveries recently made have engaged the sedulous attention of the Editor; for, as the value of each was tested by experiment, a description was considered proper. But the selection of new articles, and care in the revision of all, in this edition has now become systematically exercised; so that it may be received as fully and faithfully presenting "the existing state of Engineering and Mechanism, adapted to the wants of Practical Men." In two large 8vo volumes, cloth lettered, price 30s.

TO ARCHITECTS, SURVEYORS, BUILDERS, AND OTHERS.

AN ARCHITECT and SURVEYOR, with available assistance, prepares designs, details, perspectives specifications, valuations of houses, dilapidations, &c. on moderate terms.—Address, ARCHITECT, Office of "The Builder."

PERSPECTIVES, GEOMETRICAL and other DRAWINGS,
MADE and COLOURED by the Advertiser, from rough Sketches or otherwise.

BRICKMAKING,
BY STEAM OR HORSE POWER,
BUNNETT'S PATENT
CONTINUOUS FEED MACHINES
Are the cheapest and most efficient, and will make from 5,000 to 20,000 bricks per day, according to the power applied and the requirements of the proprietor, at one-third less working expenses than any others.
Price 75l. including royalty, and a gun-metal die for Solid, and Perforated or Hollow Bricks.
They also make all kinds of Sanitary Pipes, Tiles, or Moulded Bricks, of a superior quality.
LICENCES GRANTED TO MANUFACTURERS.
For particulars apply to BUNNETT & CO. Engineers, Deptford, Kent, where the Machines may be seen at work.

FIRE BRICK and CEMENT WORKS,
WOODEN BOX, near BURTON-ON-TRENT.
Established 1847.
JOHN KNOWLES,
HAWLEY NEW WHARF,
HAMPSTEAD ROAD, CAMDEN TOWN, N.W.
Fire Bricks, Tiles, and Lumps of all sizes, or made to order on short notice.
Crucible and Cement Clay, Wholesale and Retail for Exportation.
EVERY ARTICLE MANUFACTURED AT THE ABOVE WORKS.
N.B. These goods are supplied to the largest Steel Smelting Armour Plate, and Crucible Works in the World, to which references can be given on application.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees, 17, Millbank-street, Westminster

TO BUILDERS, BRICKMAKERS, SANITARY PIPE MANUFACTURERS, &c.

TO BE LET, on ROYALTY, an inexhaustible MINE of first-class CLAY, most advantageously situated sixty miles from London, and close to the North Western Railway, into which a siding, with all necessary appurtenances, is laid down. Abundance of water, sand, &c. The clay is at a gentle rise from the level of the railway. The mine has been most extensively proved, and the bricks, &c. made therefrom much liked. Several contracts for them are now offered.

Address, for further particulars, C. W. ORFORD, Esq. 58, New-street, Birmingham.

TO CONTRACTORS, BUILDERS, BRICKMAKERS, and OTHERS.—On SALE, a FREEHOLD ESTATE, about 53 acres, adjoining the Great Western Railway, at Southall Station, nine miles from Paddington, containing valuable brickearth, on which is established a brickyard in perfect order, with all the necessary kilns, machinery, sidings, railway-trucks, &c. &c. suitable for the manufactory of bricks of a very superior description, which have been extensively used on the Metropolitan Main Drainage, and are selected for the principal portions of the works now erected with the Thames embankment. Arrangements with the railway company enable the bricks to be delivered into London and the waterside, at a moderate cost.—Orders can be had for the whole of this season's make at good prices.—Apply to W. H. HEATH, Esq. 4, Broad-street-buildings, London. There are sidings from the railway to the kilns

TO BRICK MASTERS AND OTHERS

TO BE LET, a BRICKYARD, on the Severn Side, near to MALVERN (possession can be had at once), with good ENGINE, kilns, stove, pipe-machine, &c. all complete, in good working order, well situated, and with a good business in the Brick and Pipe Trade, with or without about 18 ACRES of MEADOW LAND. Satisfactory reasons given for present occupiers giving up the same. Application to be made to Mr. DAVID PRIEST, Chiffey Brickyard, Severn Stoke, near Worcester; or Mr JOHN JENNINGS, Bristol Fields, Oldbury, near Birmingham.

WATERSIDE PREMISES.—TO BE LET, on LEASE, a capital WHARF, having a frontage of 167 feet to the City-road Basin. The buildings comprise counting house, dwelling house, containing four rooms, corn and chaff stores standing for 12 horses, with large yard, and large wood shed adjoining, stone house, with chimney shaft, sulkey, carpenter's shop, &c.; the total superficial area being 16,480 feet. For further particulars apply to Messrs FULLER & HORSEY, 13, Billiter-street, E.C.

HARROW, ROXBOROUGH PARK.—FREEHOLD LAND (about 100 acres) TO BE LET, on 99-year Leases for Building Villa Residences. It is situate near the School, on the slope of the hill, towards the railway, from which it is distant about three-quarters of a mile. The occupant of each house would be entitled to the privileges of the School for his children, and would have a free pass by railway to London for eleven years. Bricks made on the Estate, and money advanced by the Lessor, if required.—For particulars, apply at Mr HESKETH'S Office, London Assurance, No. 7, Royal Exchange, E.C.

IMPORTANT to COAL PROPRIETORS, CAPITALISTS, and OTHERS.—The owners of valuable MINES of COAL, lying within and under a compact freehold estate of upwards of 1500 acres, situate about three miles from the important manufacturing town of Blackburn, Lancashire, are prepared to treat for the immediate SALE of the COAL, or to enter into favourable arrangements for leasing the same for a term of years. Good turnpike roads intersect the estate, and the same is within very easy distance of railway and canal.—For further particulars apply to Messrs. ROBINSON & SON, Solicitors, Blackburn.

GUILDHALL, 24th February, 1864.—The Committee for Letting the City Lands will meet at Guildhall, on WEDNESDAY, the 9th MARCH next, at ONE o'clock precisely, to receive PROPOSALS for a LEASE of the PREMISES, Nos. 71 and 72, Mark-lane, Fenchurch-street, in the City of London. A plan of the premises may be seen, and Forms of Tender obtained, upon application at the Architect's Office, Guildhall.

FERDINAND ERARD, Comptroller

TO BUILDERS, SPECULATORS, and OTHERS.—TO BE SOLD or LET, on BUILDING LEASE of 99 years, a very valuable piece of FREEHOLD LAND, tithe free, and land tax redeemed, situate in the Gresham-road, Staines, having a frontage of 232 feet to 174 feet in depth. Within three minutes' walk of the railway station, and close to the banks of the Thames.—For particulars, apply to Mr. SAMUEL HEDGE, Timber Merchant, Staines.

A FREEHOLD MANSION TO BE SOLD. The elegant Furniture may be had at a valuation. There are four reception-rooms, two being 50 feet in length; eleven best bedrooms; stabling for eight horses and four carriages; suitable servants' offices; extensive ornamental grounds, with green houses, in all 28 acres; gravelly soil; near Sunningdale Station, South-Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. MAY, Esq. Solicitor, 67, Russell-square

BUILDING LAND, at KENTISH TOWN.—TO BE LET for VILLA RESIDENCES.—Term, 80 years. Road, Paving, and sewer may be secured in Ground Rent, and improved Ground Rent purchased. For plans and terms apply personally to Mr. JOSEPH SALTER, Land Agent, No. 311, Kentish-town road, N.W.

BUILDING GROUND TO BE LET, in the City of London, from Midsummer next.—The site of the house No. 54, Fore-street, now occupied by Mr. E. Levin, containing a double frontage, that in Fore-street being 39 feet 4 inches, and in Coleman-street 41 feet 4 inches; also, other Building Ground, nearly close adjoining, the site of the tenement premises, No. 8, New Basinghall-street and No. 128, London-wall, now in the occupation of Messrs Burrowes & Pennington, having a frontage in New Basinghall-street of 40 feet, and a second or return frontage in London-wall of 29 feet 4 inches. Each of the foregoing premises are within three minutes' walk of the Bank of England, close to the Manchester and Leeds markets, and opposite the proposed station of the Metropolitan Railway. Insurance, each, will be over £60,000. Both in communication with every part of the United Kingdom, and with the port of London.—Full particulars may be obtained at the Offices of Mr. RICHARD SUTER, Architect and Surveyor, 38, Fenchurch-street, E.C. where plans of the premises may be seen. TENDERS for each of the above, on Building Leases, to be sent in on or before THURSDAY, the 24th of MARCH next, at TWELVE o'clock at noon, at the offices, addressed, sealed up, and endorsed "Tender for Premises, Fore-street and New Basinghall-street (or, as the case may be)." The Trustees of the Estate do not bind themselves to accept the highest or any Tender.

38, Fenchurch-street, E.C. 1st January, 1864.

FREEHOLD WATERSIDE PREMISES. TO BE LET or SOLD, about THREE ACRES of LAND, bounded by three roads, and a frontage to the river Thames of 300 feet. A substantial wharf wall, has been built within the last few years, at a very considerable cost. It is suitable for wharfs, warehouses, railway sheds, &c. About four miles from Charing Cross and within five minutes' walk of a station on the Metropolitan Railway.—Apply to Messrs. HOVENDEN & HEATH, 4, Broad street-buildings, City.

TO BUILDERS and OTHERS.—LAND TO BE LET, on advantageous terms for building purposes, adjoining finished New Park.—Apply at 60, City-road

TO STONE MERCHANTS, BUILDERS, and OTHERS. TO BE LET, a WHARF on the GROSVENOR CANAL, with powerful crane on the premises.—Apply by letter to M at Grigson's, 75, Old Broad street, E.C.

WANTED, a FREEHOLD PLOT of GROUND for a building purpose, containing about 1,600 superficial feet, lying between Gerrard-street and Baker's-row, Whitechapel.—Particulars to be sent, by letter only, to Mr. G. H. SIMMONDS, Surveyor, No. 7, Great Alie-street, Goodman's-fields, E.

MANUFACTURING PREMISES TO BE SOLD, at Shoreditch, with 20-horse power steam-engine, with tubular boiler, chimney shaft, and well of good water, suitable for a builder, or any business requiring a large yard and roomy premises.—Address, R. S. M. Office of "The Builder."

TO TRUSTEES of CHARITABLE INSTITUTIONS and OTHERS.—TO BE SOLD, a PIECE of FREEHOLD HEATH LAND, in SURREY, 96 acres, moderately elevated, commanding fine views, but sheltered from the north, close to the two Ash stations of the London and South-Eastern and South-Western Railways. Bricks have been made on the land.—Apply to Messrs. H. & F. CHESTER, Solicitors, 1, Church-row, Newington Butts.

KENNINGTON.—Five minutes' walk from the Elephant and Castle BUILDING LAND TO BE LET for 30 Houses, which are in great demand. Ground-rent low.—Apply to Mr. J. SEXBY 37, Lower Kennington Lane, S.

TO BUILDERS.—Long Leasehold GROUND TO BE LET, for Building Purposes, 15 feet to 45 feet frontage, at Westgrove, Dilton, Greenwich, Kingsland-road, N.E. Old-street, E.C. and Kentish Town; also the SITE for a first-class Public House at Kentish Town.—Apply to Messrs ELLIOTT & SHAW, Architects and Surveyors, 13, Finsbury-place-south, E.C.

FREEHOLD LAND TO BE SOLD or LET, on Building Leases.
2 Acres, near the Station, at Forest-hill.
1 Acre, adjoining Norwood Junction Station.
2 Acres, Giengall-road, Old Kent road.
A large WHARF TO BE LET, near the Old Kent-road.
Apply to Mr. MAY, Acorn Timber Wharf, Old Kent road.

PARQUETS SOLIDAIRES.—HOWARD & SONS, 25 and 27, Berners-street, are prepared to supply Machine-made Patented Solid PARQUET FLOORS 50 per cent. cheaper than they have been yet offered. Illustrated Catalogues, plans, and estimates free.

GUTTA-PERCHA MILL-BANDS.—The Gutta-Percha Company beg to state that the increasing demand for the Gutta Percha Strapping for Driving bands, Lathestraps, &c. fully justifies the strong recommendation they have everywhere received. Their durability and strength, permanent contractability and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Bosses, Union-joints, Flasks, Bottles, Bowls, Toilet-trays, Curtain-rings, Galvanic Batteries, Talbotype Trays, &c. &c. manufactured by the Gutta-Percha Company, and sold by their Wholesale Dealers in town and country.

THE GUTTA-PERCHA COMPANY, PATENTEES, 18, WHARF ROAD, CITY ROAD, LONDON.

BROOKS & SCHALLER (removed from Piccadilly).—The INDEX, printed MONTHLY (first published in 1820), of ESTATES, Country and Town Houses, Manors, Hunting Quarters, Shootings and Fishings, Farms, &c. TO BE LET or SOLD, can be had (free) at their Offices, 25, Charles-street, St. James's, S.W., oppos. to the Junior United Service Club. Particulars are inserted without charge, but for next publication must be forwarded before the 29th of each month.

TO ARCHITECTS AND SURVEYORS.

ROMAN CEMENT made at the above works may be had fresh from the kilns daily,—a great advantage to dealers and sewer contractors, especially in winter time.

PORTLAND CEMENT, of the best quality, strength, and colour, manufactured in Kent. This cement will carry more sand than any of the best cements to which it is now brought into the market and will set Portland.

PLASTER OF PARIS, both coarse and fine, of very superior quality and flour.

LIME. Grey Stone, Chalk, and Blue Lias Lime, well burnt, by the barge or part, and may be had fresh ground daily, by steam power, for concrete.

BRICKS from our fields in Kent, by the large alongside, in the river or canals, or by cart from the above wharf, of good quality and moderate price.

A large Assortment of Glazed Stoneware Drain-pipes, Yorkshire Flags, Tan, and Paving Tiles, Hair, Laths, Chimney-pots, &c. always kept in stock.

BRICK-FIELDS, LIME WORKS, CHALK, FLINT, AND BALLAST WHARFS,

FRINDSBURY, near ROCHESTER, KENT.

HYDRAULIC LIME and ROMAN CEMENT, manufactured by LLOYD JONES & CO Halkin Works, Holywell, Flintshire. The Halkin Hydraulic Lime is the same as used in the construction of the Liverpool Docks, Manchester, and various waterworks, collieries, and mines throughout the country, being so long celebrated for its setting consolidating and cementing powers for masonry in water. Can be supplied by rail or water to any part of the kingdom, either in lump (loose), or ground, and in barrels and bags. The limestone can be had in full cargoes, also their cement in barrels, which is of a very superior quality and warranted pure. Orders to be accompanied by a banker's reference. Apply at the Works, or to R. & W. AARON, Agents, 66, South John-street, Liverpool

PORTLAND CEMENT WORKS. FREEN & COMPANY,

THOMAS LAMBERT & SON,

PATENTEES and MANUFACTURERS, SHORT STREET, NEW CUT, LAMBETH.

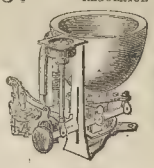
T. L. & SON find it necessary to state that their manufactures have their NAME legibly marked thereon.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether so labelled under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil



EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

J. TYLOR & SONS' PATE

KEYNSHAM BLUE LIAS LIME AND CEMENT WORKS, SOMERSET.

MESSRS. FULLER & HORSEY are instructed by the Official Liquidator to SELL by AUCTION on WEDNESDAY, MARCH 16th, at TWELVE o'clock at the AUCTION MART, London, in One Lot, unless an acceptable offer be previously made by private contract, the Freehold and Leasehold FIRE-HOLD WORKS and ESTATE of the Keynsham Blue Lias Lime and Cement Company (limited), together with the modern PLANT and MACHINERY. The property is finely situate in the parish of Keynsham, and thereabouts. The works were established for manufacturing lime has lime from stone quarried on the estate, and for making cement, for the existing kilns and others are in hand for making 70 tons per week of lime and 100 tons of cement weekly; both products are well approved by large contractors at present at work in the west. The cement is prepared in many of the Government fortifications now in progress. Coals are supplied to the works at a very low price, and the Great Western Railway Station is well in a short distance. The buildings are very substantial, and the latest plant of the best description; the motive power is given by two iron water-wheels, driven by the river Chew, a regular stream of water, of great power; and there is a steam engine, with boilers, in addition. Kilnwood and apply of lime is secured from adjoining owners on favourable terms. May be viewed 14 days prior to sale, and particulars had of Messrs. N. LYNDE & SONS, Solicitors, 47a, Moorgate-street; of F. MAYNARD, Esq. Lionsdale, 19, Broad street, Cheapside; at the Mart; and of Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

TO ENGINEERS, MILLWRIGHTS, IRON FOUNDERS, AND SAW MILL PROPRIETORS.

MESSRS. FULLER & HORSEY are instructed by Mr. Lee, who is removing to High Wycombe to DISPOSE of by PRIVATE CONTRACT, the FREEHOLD WORKS at OXFORD, known as the MILLBANK IRON WORKS, on the banks of the Thames, long established as a good repairing and jobbing work. The Premises are well arranged, and comprise a spacious Engineers' Factory, fitted with lathes, planing and drilling machines, steam power, &c. an iron foundry, &c. Also a Saw Mill, with frame saw, circular saw, pattern makers' shop, a newly erected saw-mill, with capital frame by Horn, circular saw bench, &c. yard, and compact dwelling house. The timber of the Saw Mill is mostly of Oak, and the large extent of building operations now in progress in the city and suburbs, will ensure to an active man a continuance of the business for years to come.—For further particulars apply to Mr. Lee. A portion of the purchase money may remain if desired. From 2,000l. to 3,000l. capital will be sufficient.—For further particulars, apply to Messrs FULLER & HORSEY, 13, Billiter-street, London, E.C.

ON FRIDAY, MARCH the 18th (instead of the 11th).—To SHIP-BUILDERS, TIMBER MERCHANTS, and OTHERS.—TISBURY—WARDOUR, WILTS, Two Miles from Tisbury Station, Salisbury and Exeter Railway.

MR. JOHN WATERS (Canal, Salisbury) begs to give notice of SALE by AUCTION, at the ARUNDEL ARMS INN, Tisbury Station, on FRIDAY, 18th MARCH, at TWO o'clock punctually, a very large cutting of PRIME NAVY OAK TIMBER, colour sized, in 1 lots, suitable for Oak Trees for Parks, Shipbuilding, and merchants, with the top, top, and bark; also ELM and ASH TREES, felled, some of which are from 80 to 120 feet merchantable, of prime quality of Oak; and may be obtained of Messrs. HAWLEY & SQUAREY, Land Agents, Salisbury; Mr. JEFFERY, Old Warden Castle; or of the Auctioneer.

LOWER CLAPTON.—Valuable FREEHOLD and COPYHOLD PROPERTY, including several leases of rent of important Building Land.

MESSRS. NORTON, HOGGART, & TRIST have received instructions from the Executors under the will of the late Skinner Turner, esq. to offer FOR SALE by AUCTION, on WEDNESDAY, MARCH 23rd, at TWELVE in six lots, the following valuable PROPERTY:—No. 1, a capital and substantial detached Family Mansion, pleasantly situate at the lower end, fronting the High London-road (for many years in the occupation of the late owner), containing eight bed rooms, dressing room, day and night nurseries, principal and secondary staircases, entrance and lower halls, drawing room 21 feet 6 inches by 14 feet 6 inches, dining room 22 feet by 15 feet 1 inch, library, breakfast room, servants' bedrooms, three stall stable, two loose boxes, three coach houses, coach house, greenhouse, range of walled-in garden, and kitchen garden, the whole containing 1 acre 1 rood, with the only unexpired term of seventy-four years to Back-lane as well as to the high road, a compact house adjoining, containing nine fine bed rooms, water-closet, drawing and dining rooms, kitchen, convenient offices, lawn, and flower garden, in the occupation of R. Lucas, esq. yearly tenant, at a rent of 54l. 15s. per annum; a pair of excellent semi-detached Residences adjoining, each containing eight bed rooms, three bath rooms, two closets, entrance hall, elegant drawing room, 26 feet by 15 feet 6 inches, dining-room, 22 feet by 15 feet 6 inches, breakfast room, convenient domestic offices, stabling, coach house, greenhouse, lawn, flower and kitchen gardens, extending to Back-lane, in the occupation of the Rev. H. Davies and — Barlow, esq. and together or the value of about 80l. per annum. These houses are let for 17 years at ground rents amounting together to 10l. per annum, at the expiration of which term the Lessee will become entitled to the rack rentals. A detached Residence adjoining, containing four bed rooms, dressing and dining rooms, study, kitchen and offices, lawn, flower and kitchen gardens, outbuildings, fruit trees, &c. in the occupation of F. Bellinger, esq. yearly tenant, at 50l. per annum. The whole of the foregoing property is copyhold of the manor of Hackney, but nearly equal in value to freehold, and is subject to a small fine certain. Also the very important and valuable Building Land at the rear, known as the Clapton Cricket Fields, possessing extensive frontages to Park-road and Lea-bridge-road, and two roads in front, the greater portion freehold, admirably adapted for the erection of residences so much in request in this locality, and presenting a most unusual opportunity for a profitable building speculation.—May be viewed by cards only, and particulars and plans shortly had of Messrs. WOOD & DU CANE, Solicitors, 3, Great Tim square, W.C. at the Mart; and of Messrs. NORTON, HOGGART, & TRIST, 63, Old Broad-street, Royal Exchange.

CREWE.—FREEHOLD BUILDING LAND.—TO BE SOLD BY AUCTION, pursuant to a Decree of the High Court of Chancery made in cause Hilmore v. Elliot, by the Vice Chancellor Sir John Stuart, the judge to whom the same is attached, by

MESSRS. CHURTON, the persons appointed for that purpose, on TUESDAY, the 22nd day of MARCH, 1864, at the CREWE ARMS HOTEL, Crewe, at TWO o'clock in the afternoon, subject as later PREEMPTIVE BUILDING LAND, of desirable size varying from 214 to 930 square yards, abutting on a new road leading from the Nantwich road to the Shavington-road, on the Nantwich-road, on a new road leading from Nantwich-road into Mill-street, and north side of the Wistaston new road (late Sandy Lane), in Wistaston. All at Crewe in the immediate neighbourhood of the railway stations and railway works.—Particulars and conditions of sale, with plans may be had (gratis) on application to Messrs FISHER & HODGES, Newport, Salop; Messrs PINNOCK & WILKINSON, 28, Hurstreet, Bedford-row; Messrs. GREGORY & CO. Bedford-row, London; Messrs. BROUGHTON & HENSLEY, and RICHARD C. EDLESTON, Esq. Nantwich, Cheshire, Messrs. CHURTON, Auctioneers, Chester, and Whitchurch, Salop; and at the place of sale.—Dated this 22nd day of February, 1864.

ALFRED HALL, Chief Clerk.

SALE of TIMBER.—104, Bermondsey New Road.

THOMAS ROBERTS & CO. will SELL by AUCTION, on WEDNESDAY, MARCH 16th and following days, if required, in convenient lots, all the valuable BUILDING MATERIALS, which formed the Convent House School and numerous OUTBUILDINGS, and have been recently taken down (with the exception of the Chapel and "House of Mercy"), which will be sold standing, consisting of (amongst other things) tiles, slates, bricks, an immense quantity of stone plinths, jambs, door-heads, window sills, landings, &c. also a large parcel of beautiful oak, elm, and Bath stone, and other carved works of art; stone crocketed pinnacles, stone to the Yorkshire paving and other stone &c. &c.; also all the valuable OAK and other TIMBER in the roofs and floors in the entire buildings comprising spars, principals, side trees, wall plates, joists, joists, boards, doors and other descriptions of timber; also very large quantity of glass, sashes, and casements, of various sizes, plain and ornamental, as good as new; a very large quantity of very good paving and coping, an excellent 3-horse power steam engine and boiler, a capital 8-inch cistern, and a pair of 6-inche front doors, together with all the building materials forming the Boundary Wall, with its ornamental stone balustrades; also the boundary wall round the garden; large quantities of plain and ornamented iron rail bars, useful wrought iron work, cast-iron columns, and a quantity of good wrought and cast-iron, &c. &c. The whole of the brick and brick-work of the beautiful Chapel, with the Gothic windows; and also the stone and brickwork of the building called "The House of Mercy." The sale to commence each day at TEN for ELEVEN o'clock punctually. The scale of the lots can be had on the ground, and will be on view two days previous to and on the morning of sale.—For particulars of situation apply to the Auctioneer, Derby; Mr. SAMUEL SMITH, Iron Merchant, Derby; and S. T. BARBOULEAU, Esq. Solicitor, 1, Jeffery's-square, St. Mary Axe, London, E.C.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE

WAREHOUSE is now REMOVED to the NEW PREMISES, 72–74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand; and also for the consequent more extensive execution, by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work.

72–74, Bishopsgate street Within, November, 1863.

COMPETITIONS.

TO ARCHITECTS.—The Committee for the

ERECTION of a NEW CHURCH in High Park-street, Toxteth Park, Liverpool (land 38 yards deep from north to south, fronting the north), offer the sum of 50*l.* to the Architect who, in their judgment, furnishes to them the best PLAN and complete SPECIFICATION, and 25*l.* for the second-best, subject to the following conditions:—

The Church is to accommodate 600 on the ground-floor, and 400 free sittings either in side, west end, or transept galleries. Organ stalls of chancel. The Church is to be built externally with snoddies and Stourton stone-dressings, and internally with bricks, and is not to cost more than 4,000*l.* including hot-water warming apparatus, but excluding the boundary fences. The roof to be open. Scale, 8 feet to an inch, with figured dimensions throughout. Four elevations, foundations, ground, gallery, and roof plans, sections through to the ends, and also a longitudinal section, to be furnished. The Committee will retain the two selected designs, returning those not approved The Designs and Specifications to be sent under cover to the Office of THOMAS DARNLEY ANDERSON, Esq India-buildings, Water street, Liverpool, on or before the 1st day of APRIL next The Committee do not pledge themselves to accept any Design which, on being estimated, cannot be executed for the sum stipulated.

TOWN and BOROUGH of ROCHDALE.

TOWN HALL, &c.—TO ARCHITECTS.—The Corporation of Rochdale are desirous of receiving DESIGNS for a TOWN HALL, wherein are to be provided fit and convenient public offices, for holding the meetings and transacting the business of the Council, and for holding such public meetings and transacting such public business as the Council may direct or allow to be held therein. The following premiums will be given for such three of the designs as in the opinion of the Council are the highest in merit, viz:—

For the 1st set of such designs, 100*l.*
" 2nd ditto 60*l.*
" 3rd ditto 40*l.*

all of which premiated designs are to become the absolute property of the Corporation. The plans, specifications, and estimates must be distinguished by a motto or device, and be accompanied by a sealed envelope containing the name and address of the competitor, bearing a corresponding motto or device to that on the plans, &c Lithographed plans of the site, with particulars of the offices, rooms, and conveniences required, may be had on application to the Town Clerk on and after the 5th MARCH next; and the competing Designs, &c. must be delivered at my Office, in Yorkshire street, Rochdale, on or before the 1st day of MAY next By order.

ZACH. MELLOR, Town Clerk.

Rochdale, 27th February, 1864.

CONTRACTS.

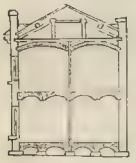
NOTICE TO ARCHITECTS AND THE TRADE.

WEST-END BRANCH, EGYPTIAN HALL, PICCADILLY.

J. DEFRIES & SONS,

GAS ENGINEERS AND MANUFACTURERS OF

CRYSTAL, BRONZED, AND ORMOLU CHANDELIERS, IMPROVED CRYSTAL STAR AND SUN LIGHTS,



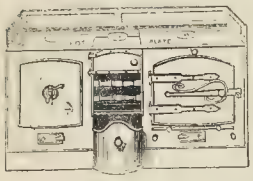
For Lighting and Ventilating Public and Private Buildings.

J. D. & SONS beg most respectfully to inform Architects and the Trade, that having been solicited to open a West-end Branch, they have taken the DUDLEY GALLERY, EGYPTIAN HALL, PICCADILLY, and at an enormous outlay they have made it replete with every description of lighting machines, including REGISTERED DESIGNS of MEDIEVAL GAS-FITTINGS, CRYSTAL, BRONZED, ORMOLU, and ELECTRO PLATED Chandeliers, Brackets, Vestibule Lights, Bronzed and Gilt Statuettes.

SPECIAL DESIGNS PREPARED in perfect ACCORDANCE WITH Architectural Arrangements. Estimates furnished FOR THE LIGHTING and Fitting up of Theatres, Music-halls, and Public or Private Buildings with Gas, &c.

The usual trade discount allowed, as at their

MANUFACTORY and CITY SHOW ROOMS, 147, HOUNDSDITCH, CITY.



THE DENNETT ARCH.

Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq., for the New Foreign Offices, used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.

Address to the Patentees,—A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength; and its extreme convenience of application. I have made use of it in situations that the arches constructed of it did not to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are entirely in one piece, and they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.

"GEO. GILBERT Spring Gardens London."

THE LEAMINGTON PRIZE KITCHENER.

These Ranges are strongly recommended for Economy, Cleanliness, and a Cure for Smoky Chimneys.

The Top forms an entire and efficient Hot Plate, and having an Open Fire, removes all the objections of a Close Fire-range.

A large STOCK of SELF-ACTING and other RANGES, REGISTER STOVES, and every description of BUILDERS' IRONMONGERY, at Wholesale Prices.

All Goods delivered free within Five Miles.

BURT & POTTS,

WHOLESALE AND MANUFACTURING IRONMONGERS

38 and 65, York-street, Westminster

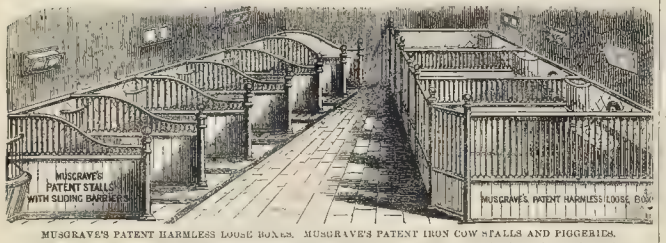
BROWN & GREEN'S

PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

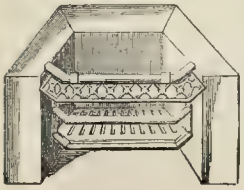


these Ranges are unequalled. They are of all sizes and prices; and when fitted with Bath and Steam Apparatus, &c they form the most complete appointment for good establishments. Designs, &c may be had on application at THE LONDON WAREHOUSE,

72—74, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept. 6, 1862.

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.



MUSGRAVE'S PATENT STABLE AND HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES, MUSGRAVE'S PATENT IRON COW STALLS AND PIGGERIES.

Architects who have not seen these Fittings are requested to write for Engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition. They can be seen in first class stables in almost every county in England and MUSGRAVE, BROTHERS, are now fitting several very large establishments on for direct use of London Architects, noted for economy; only what is the best of its kind. Particulars of these, as well as of MUSGRAVE'S PATENT SLOW-COMBUSTION STOVE, will be forwarded on application to

MUSGRAVE, BROTHERS, ANN STREET IRON WORKS, BELFAST.

FIRE-LUMP STOVES,

FOR BED-ROOMS, COTTAGES, SERVANTS' OFFICES, BARRACKS, SCHOOLROOMS, WAREHOUSES, CHARITABLE INSTITUTIONS, &c.

With hanging trivet.

THE IMPROVED OPEN FIRE KITCHENER,

Manufactured by

WM. OWEN,

PHŒNIX IRON WORKS,

ROTHERHAM,

Possesses all the advantages of the ordinary Close Fire Kitchener, in having excellent Hot Plates on top of Ovens, for boiling, steaming, or stewing, with the additional advantage of having a thoroughly effective and deep OPEN Fire for roasting purposes.

The Ovens are heated upon Bradley's Patent Principle (under which W. O. possesses the sole right to manufacture), and by which a great economy of fuel is effected.

These Kitcheners are made of all qualities and sizes, suitable for all classes of houses, from the cottage to the mansion; and can be OBTAINED THROUGH ANY IRONMONGER in the UNITED KINGDOM.

WM. OWEN,

GENERAL IRONFOUNDER, STOVE GRATE AND FENDER MANUFACTURER,

A Prospectus, with full description and price of the above, will be sent per Post on application.

WROUGHT IRON WINE BINS.

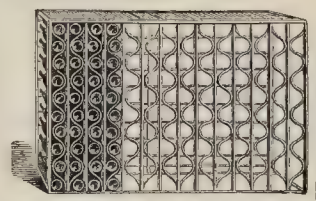
FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING nearly FORTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom.

*** As these Bins were the invention of the late Mr. FARROW, and great attention has been given to them by the present Firm, long practical experience enables FARROW & JACKSON to offer the best advice as to arrangement.



ALSO THEIR

NEW REGISTERED IRON BINS,

ade any size or shape, to fit any spare corner, with SEPARATE REST FOR EACH BOTTLE,

Peculiarly adapted for Private Cellars.

o laths are required, and all trouble of Binning avoided. The Cellular Bins may also be had ted with light lattice doors, affording perfect security to the contents of the Bin.

THE PATENT UNIVERSAL

CHIMNEY HEAD.

This Chimney Head has been designed for the Prevention of Smoky Chimneys and Down Draughts. The numerous apertures are so placed as to guide the wind upwards, as it strikes the head from any quarter, thus creating a strong current, and assisting the exit of the smoke through the top. The same apertures give ready egress to the wind on all sides in case of its striking downwards, as from above, and thus greatly diminish the danger of its passing down the chimney.

Price in Zinc..... 22s.
Ditto, Kitchen size ..... 32s.
Price in Galvanized Iron 28s.
Ditto, Kitchen size..... 35s.

A Liberal Allowance to the Trade.

Manufactured solely by

40, 41, and 42, Chandos-street, Charing cross, London, W.C.

And to be obtained of all respectable Ironmongers in London and Country.

SMOKY CHIMNEYS

S. DEACON

Respectfully invites the attention of Architects Builders, &c. to his

PATENT LOUVRE CHIMNEY CAP,

which has been in use some time with perfect success, many curing chimneys where other caps have been of no avail.

The advantages attending this Cap are—it can be thoroughly cleaned by the machine when the chimney is swept, the brush being able to pass through the Cap without the liability of misplacing it; an increased up current, and the impossibility of a down one.

Prospectus, with testimonials, forwarded on receipt of Postage Stamp, by

S. DEACON,

ANTHONY LEON Secretary to the Company.

TO BREWERS, DISTILLERS, BUILDERS, CONTRACTORS, COAL MERCHANTS, and Others.—

Four first-class WAGGON HORSES FOR SALE, six year olds, direct from the country. Warranted.—Apply to W. ROGERS, Trafalgar Inn, Latimer-road, Notting Hill, where they can be seen.

GOULD & PORTER (late CARY) are now

manufacturing their improved 10-inch DUMPY LEVEL, best quality, complete for 10*l.* 10*s.*; with silver ring compass, 10*l.* 10*s.* 0*d.*; 12 inch ditto, ditto, 11*l.* 0*s.* 0*d.* and 15*l.* 15*s.* 0*d.* Best 5-inch THEODOLITES, 22*l.* 15*s.* 0*d.* All other MATHEMATICAL INSTRUMENTS at Revised Prices.—Optical and Mathematical Instrument Makers to the Admiralty, Royal Geographical Society, Royal Military College, Sandhurst, &c. Established upwards of a century.—181, Strand, London.

GUTTA-PERCHA MILL-BANDS.—The

Gutta Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving-bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractability and uniformity of substance, their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Bosses, Union-joints, Flasks, Bottles, Bowls, Toilet-trays, Curtain-rings, Galvanic Batteries, Tablotype Trays, &c. &c. manufactured by the Gutta Percha Company, and sold by their Wholesale Dealers in town and country.

THE GUTTA-PERCHA COMPANY, PATENTEES,
18, WHARF ROAD, CITY ROAD, LONDON.

MONEY.—IMMEDIATE CASH

ADVANCES on FREEHOLD and LEASEHOLD PROPERTY, REVERSIONS and ANNUITIES, WINE, SPIRIT, and TIMBER WARRANTS, FURNITURE, SHARES, &c.

Mr. RICHARD CROSSLEY, 17, Moorgate-street, Bank, E.C.

TEN THOUSAND POUNDS READY TO

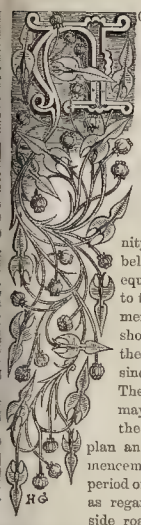
BE ADVANCED by the TEMPERANCE PERMANENT LAND AND BUILDING SOCIETY, on Freehold or Leasehold Property, for any period of years not exceeding fifteen, the mortgage being redeemable by equal monthly instalments. Interest (in addition to a small premium), 5 per cent. on the balance each year.—Apply to HENRY J. PHILLIPS, Secretary.

Offices, 34, Moorgate-street, London, E.C.

NOTE.—More than a quarter of a million pounds sterling have been advanced upon house property alone.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the

MUTUAL LOAN FUND ASSOCIATION



(Incorporated by Act of Parliament, 1850), 14, RUSSELL STREET, Covent Garden, W.C. Advances from 100*l.* to 1,000*l.* upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.

EDWARD HARPER, Secretary.

The Builder.

VOL. XXII.—No. 1101.

The Thames Embankment, in reference to the general Embellishment of London.

HOWEVER much may have been already written on this subject, its national importance and the great results which may be obtained from successfully carrying it out in all its bearings and consequences cannot be too often reiterated, nor too strongly impressed upon the public mind, especially that of our artistic public. No opportunity for the substantial embellishment of the metropolis, equal in extent and importance to that afforded by the embankment of the Thames, unless we should except that afforded by the fire of 1666, has occurred since London was first founded. The high antiquity of its origin may, in fact, be reckoned among the causes of the utter neglect of plan and foresight in its rude commencement and during the whole period of its early growth; especially as regards the formation of river-side roadways. The huts of the first inhabitants were doubtless huddled down close to the water's edge, or built on piles in the far-spreading shallows, as a protection from wild beasts or still more savage human foes. Those early British homes were aquatic fortresses, such as those lake-dwellings of the early races who first peopled Switzerland, the remains of which have been recently investigated with valuable and instructive results respecting the earliest domestic architecture of man, and the probable antiquity of our race.

Such a village as the first London was, must, from its commanding position, have become, gradually, even in Celtic times, a great town, in so far as an aggregation of the dwellings of semi-barbarians can be so called. The Roman period of its existence came next, lasting nearly four centuries, during which the British huts were transformed into dwellings of a more substantial character. But the disposition of the site was not radically changed; nor was the custom abandoned of constructing the buildings at the very brink of the stream. The Roman fortress, "Cæsar's tower," had its chief and possibly sole entrance from the water; still represented by the approach now known as the "Traitor's Gate." Rome itself was, in fact, so built; and the Tiber, even in the great days of Imperial Rome, had no stately quays like those of modern cities. On the contrary, like all very ancient capitals founded on the banks of rivers, its buildings, in the dense part of the city, those surroundings of the original nucleus, on the Acropolis or Capitoline Hill, were crowded down to the very brink of the stream, and the chambers of the houses actually overhung the water, just as we still see in modern Rome, where the present houses occupy pretty nearly the sites of their ancient predecessors, and at the different stories of which contrivances of various kinds are established at the windows for drawing up water directly from the river itself by means of buckets and pulleys. Though Roman London possessed no quays, it had yet its public buildings, more or less important as architectural works, but all on a comparatively small scale, such as we still see in the ancient remains of many of the inferior provincial towns of Italy.

During the most settled periods of the Saxon era, no improvement in the general plan of the great British city was likely to take place. Even when, in the reign of Alfred, London was burnt by the Danes, and almost entirely rebuilt by the Anglo-Saxon king, no attempt was made to change the original plan of the partially-destroyed city. There was but slight security against a renewed attack by the Danes, and the means of a speedy escape by water was rather an inducement than otherwise to keep the dwellings as close to the river as possible, in order to facilitate escape by water in case of sudden necessity, and the new buildings therefore, as may well be conceived, were made to hug the shore still closer than before. Even when land was afterwards gained from the far-spreading shallows of the unconfined stream, by irregular embankments, which gradually confined the river to its more legitimate bed, the acquisition was only regarded as new space for houses, which quickly covered it to the furthest edge of the new water-line.

In the Anglo-Norman times, from the invasion, in the eleventh century, to the close of the Plantagenet dynasty, in the fifteenth,—and even through the reign of the Tudors, in the sixteenth, and to the close of that of the Stuarts in the seventeenth,—no attempt was made to embellish or utilize the banks of the Thames, by the formation of a good continuous roadway. There were, however, open spaces; and we hear of irregularly established bank-side theatres, &c., but no attempt at anything like a systematic line of quay or roadway. The "Strand" meant literally the roadway on the river shore; but then, its houses did not face the river, with a roadway in their front, but, on the contrary, the original dwellings of the ancient *Strand* roadway had their backs to the river, with, probably, direct access to the water at high-tide; the building-ground at their rear having been subsequently acquired by gradually raising its level above the low shore, which was only dry when the tide was out.

Even during our "Georgian" era, and far into the commencement of the nineteenth century, looking at the matter from a "public" point of view, civilization seems only to have been developing its merely material forces,—which would always seem to have predominated during the entire growth of London, to the exclusion of its more spiritual aspects,—which may be classed as those sentiments in public progress which delight in the production of the beautiful, not only as a more attractive form of the useful, but strictly for beauty's sake. Such a sentiment seems never, as yet, to have made itself felt in guiding the far-spreading growth of our vast metropolis. Every inch of land, or mud, on the banks of the river, either naturally existing or artificially created, was successively seized upon (wherever not preoccupied by the private gardens and houses of the wealthy) for purely commercial purposes, the prosaic instincts of trade (parent of our material greatness) piling up its stacks of wharfs or warehouses in a very mob of squalid or unsightly forms over every foot of water-frontage, in spite of fast-multiplying streams of filth, conducted straight to the river, as the shortest, cheapest, and therefore best way of disposing of them.

It was not till within the last thirty or forty years that a few men of genius, one after another, began to seek a remedy for this state of things, and to make our noble river, as it ought to be, the chief feature of our great capital,—its shores embellished by all the resources of art. It is needless to repeat that such projects were deemed, both by our public and our Government, the mere visionary utopias of fanciful dreamers;—and the creation of spacious quays along the London shores of the Thames, serving as terraces for noble lines of public and private edifices of grand architectural character, was treated as a wild scheme, to be looked upon with supercilious disdain by all really sensible men: while the projectors themselves, well meaning though they might be, were only to be tolerated on account of their impotency to carry into effect their amiable follies, the growth of ill-regulated and unbusinesslike minds.

A better spirit has at length arisen, and increasing intelligence, strongly stimulated by fearful visitations of cholera, and the dangerously crowded state of the main existing thoroughfares of London, has forced upon the Legislature the conviction that the time has at last come for undertaking the purification of the Thames and the formation of a spacious embankment and roadway along its shores. It is now some time since a Bill has been actually passed for carrying those great desiderata into immediate effect; and it therefore becomes necessary that the public should watch with the most earnest vigilance every phase of this great opportunity, and follow with the closest attention every step that is taken, lest it should be one in the wrong direction, the effects of which might be irretrievable. We have now, it is true, a Metropolitan Board of Works, popularly elected, and the powers of which are considerable. But those powers are hampered and limited by the narrow scope of the present Act to such an extent that without an accession of fresh power, by a new Bill, a satisfactory solution of this great question is impossible.

Among the chief of the fetters by which their actions are manacled is the amount of the outlay they are limited to for the completion of the entire line of embankment, the whole of which amount is absorbed by contracts that will not carry it over much above half the distance required; while Parliament, in the over-closeness of its economy, considered it enough for the whole.

Then, again, their powers are strictly confined to the creation of such a quay or roadway as can be taken from the river; and they are stringently denied the power of purchasing land to widen the roadway where sufficient breadth cannot be obtained in the manner dictated by the Act. So that the actually projected roadway, as it seems to us, in many places will not exceed 80 feet in breadth,—barely sufficient for the expected traffic, without making any provision for the erection of a suitable series of buildings on the land side.

It is said that if power had been granted by the Bill, enabling the Board to compel proprietors of adjoining land to sell their estates, or portions of their estates, for the purposes in view, the Bill itself would not have been carried,—as the property of several influential peers was concerned. From what we have all seen of the "pressure from without" which was necessary to overcome the Montague House impediment, this appears possible; but, as much of the property in question is of an inferior class, for which ample remuneration would have been secured, it seems hardly probable, when it is considered that by such vexatious opposition a great public benefit might have been fatally jeopardized. Whatever may have been the cause which induced the framers of the Bill to exclude from it the power of purchasing adjoining land, it is clear a further difficulty has been raised in the way of the more complete carrying out of this great national project, by the now increased value of adjoining lands. It will be regarded as a wilful squandering of the public means on the part of the Parliamentary managers of the scheme first to make a vast outlay, enormously increasing the value of the lands they will almost immediately require, and then to pay with the public money the increased price created by themselves. But, doubtless, as the imperative necessity of vastly extending the prevailing views concerning this

great work makes itself felt, the present apparent difficulties will disappear, or be met with liberal views on all sides.

Nevertheless, timely measures should be taken, and on the above and other grounds, a much more comprehensive general scheme than the absolute embankment, should be carefully formed and adopted. All the improvements likely to follow upon the realization of such a work should be considered and prepared for; otherwise, arrangements, appearing plausible enough to such as do not look beyond the present extent of the actual undertaking, may render impossible the carrying out of many closely connected improvements in the adjacent parts of the metropolis,—improvements which must necessarily follow upon this first really grand scheme of metropolitan embellishment. Or, if such improvements be not rendered absolutely impossible, they may be made so costly from the necessity of undoing recent and expensive works, as to render the carrying out even of the most highly desirable changes prudentially unadvisable for long years to come. In order to show the necessity of at once taking into consideration such a general view of those portions of the metropolis near the Thames as has just been suggested, with a view to a radical amelioration of their existing plan, now that we have evidently arrived at an epoch of great impending innovations and improvements, it may be well to point out one or two recently-created instances in which want of foresight, of precisely the kind feared, and also the non-existence of a largely-conceived general plan, have already led to the existence of almost insurmountable obstacles to the unfettered progress of the embankment in its legitimate direction. The first of the cases in point is the erection of the Houses of Parliament, in which regard was only had to themselves, by themselves, and not in connexion with succeeding improvements, in which they ought to have been fitted to play their part; especially in forming a splendid portion of a magnificent series of buildings, having a river aspect with a broad roadway in their front. But they were not so fitted; and the consequence of this disregard of future eventualities, caused by the absence of any generally-accepted plan, as forming the basis of all neighbouring improvements, was, that the Houses were placed on so low a level that it will be difficult, if not impossible, to make the level of the new roadway agree with it. For instance, it *may* become advisable to make the embankment of such a height as to admit of a wide and deep subway for railway traffic, or other purposes: not a mere tunnel, but a gallery, which, though having the permanent roadway above, would be open to the river,—the common traffic roadway being supported on a series of columns or arches, with wide and massive piers at certain distances; the subway being lighted, ventilated, and having a view of the river, through the open archways. This plan, or any other similar one for making use of the depth of the embankment, is rendered all but impossible beyond Westminster Bridge, as just stated, by the low level of the terrace in front of the Houses of Parliament. Again, just at the narrowest part of the river, so much has been robbed from its width for the platform of the Houses of Parliament, that further encroachment for a public roadway is rendered difficult; while, furthermore, the "Houses" have been pushed so far forward that they will never range as they should do with the great line of public or private buildings that is destined at no very distant period to front the inner side of the great embankment.

Another difficulty to notice, among many others, has been allowed to be created in the shape of the station and approaches to the Charing-cross Railway, and which will fatally impede the view along the continuous roadway. Between Somerset House and the Houses of Parliament nothing ought to have been allowed to interfere with the grandeur of a long open expanse of quay; and with timely foresight there was no reason why such impediments should not have been prevented.

Seeing, therefore, the importance of a general and very comprehensive plan regarding the alterations which will necessarily arise out of the vast and important metropolitan improvement now impending in the shape of the great embankment, the most advisable course seems to be, that the Metropolitan Board of Works or a special commission appointed by Government should draw up a grand and comprehensive plan, towards the realization of which all the improvements which will certainly arise out of the vastly increased importance of the river frontage, from Somerset House to Vauxhall-bridge, should tend. The plan should extend as far back as the line of the Strand and Parliament-street, and to a considerable depth to the north of the river between the houses of Parliament-street and Vauxhall-bridge. Much of the land in question is still covered with buildings of a very inferior description, though destined, in a very short time, to become most valuable and important building ground. The whole of Scotland-yard, for instance, and much adjacent space, every inch of which might be made as precious as the frontage line of Cheapside, or wharfage room at London Bridge, still lies comparatively idle. In a very few years it will appear like a miracle that such a space, in such a situation, should have remained for centuries unoccupied by some of the noblest buildings of the whole metropolis. If the Government, or even a great national company, obtaining an Act, and taking in hand the whole of the land lying between the Strand, Parliament-street, and the river, should gradually replace the whole of the present buildings by structures worthy of the Court end of London, erected upon a grand general plan, in harmony with the best features of the Thames Embankment, the profit returns would be enormous, and we might eventually possess a metropolis which, architecturally considered, could not be matched by any in Europe; for the southern shore, where the ground is still less occupied, would soon follow the example of the north (a wide bridge being thrown over, as we long ago suggested), and the effect of such a *quartier*, as the French would call it, on each side of the river, would be, indeed, magnificent. But without some pre-arranged general plan, exhibiting prospectively a grand outline of the features of a south-western London as it should be, the successive improvements or innovations, as they occur, will necessarily be of a fragmentary, spasmodic, and dislocated character, in no wise tending to the realization of such a result as the one suggested.

Keeping these deductions in view, might it not be very desirable that the Metropolitan Board of Works, or even a Government Commission, should call upon the artistic genius of the country at large to furnish ideal plans of a south-western London such as architects and men of art in general might be justly proud of? What matter if some of the plans sent in might be somewhat dreamy: if splendid dreams, so much the better: they would then be sufficiently in advance of the plodding realities of the present, not to become quite obsolete before the time for carrying them out might arrive. We have hitherto been too impatient of the projects of splendid dreamers, forgetting that the dreams of one age are the realities of the next. It is therefore to be hoped that the initiative will be taken in time, either by the Metropolitan Board of Works or some higher power, in obtaining a series of artistic ideas regarding a general plan of such London improvements as are likely to grow out of the embankment scheme. And it is to be hoped that every journal in the country devoted to any branch of art will vigilantly watch every step of progress in the projected London quays, energetically protesting against any disfigurements, or even short-comings; against any attempt to drive a railway along the roadway of the embankment; against the disfigurement of adjacent approaches by such hideous railway viaducts as those recently perpetrated in the neighbourhood of London-bridge; against the passage of innumerable railway bridges across the river; and, by suggestion, or criticism, or encouragement, when due, aid in every possible way in carrying out to its legitimate ends this truly grand and national work. The *Builder* will not be found wanting in supporting with all its influence a grand and comprehensive series of improvements, the commencement of which is about to be made by the formation of the Thames Embankment.

THOUGHTS AND SUGGESTIONS ON THE ARTISTIC EDUCATION OF ARCHITECTS.*

HAVING been kindly asked to read a paper at one of your meetings, I at first selected a subject with which I felt myself to be tolerably conversant,—the transition from the Romanesque to the Pointed style in England, as compared with that in France. Finding, however, that this trenched somewhat upon a subject chosen by my friend Mr. Hayter Lewis, I was obliged to look out for another, and have chosen one with which, though it has long occupied much of my thoughts, I am sorry to say that I am very far indeed from being practically conversant.

While, however, I have to apologise to the meeting for presuming to address them on a subject with which I have no very intimate acquaintance, and on which I have no claim to offer any very decided opinion, I think that I may make my very deficiencies the groundwork of my apology; for my motive in coming before you is my strong conviction that it is a subject on which we are all grievously at fault, and my very object in addressing you is to urge this deficiency upon your most serious attention; while, in giving my paper the title of "Thoughts and Suggestions," I must beg to be understood to mean thoughts of *sorrow* for undoubted shortcomings, and suggestions of *inquiry* as to the means of amendment.

The questions which I wish to lay seriously before you (and I am well aware that you have earnestly considered them for yourselves, and are fully alive to their importance) are these:—Are we English architects as thoroughly trained as we ought to be *as artists?* Is our professional education sufficiently directed to architecture as viewed in its high character as a *Fine Art?* Is there any ready and recognised mode in which the student of architecture can obtain this high-art education? and,—if all these questions must be answered in the negative,—by what means can such deficiencies be most effectually remedied?

Now, there are many ways in which an architect or other artist may be educated. He may be trained in an *academy*, and learn his art wholly from professors and by means of a fixed routine of teaching in regular and recognised schools: that is one way. Or he may learn it on the French *atelier* system, in which an artist keeps a kind of school, unconnected with his own professional avocations; which he visits from time to time; gives advice and instruction to his pupils and corrects their works, such works being without reference to his own practical undertakings; and this system may be linked on, as in France, to the academic system. Or he may be educated by working in the office of an architect, assisting in his practical works, and learning his profession by actually seeing and personally aiding its operations.

Now, we have heard recently a great deal said (with reference to the sister art of painting) in favour of the old system of pupils working in the studios of their master, and learning their art by helping him in his works. It was often stated before the recent Royal Academy Commission—as it had been in 1836 before the Committee on Arts and Manufactures—that the substitution of the Academy system for this older course of training has been the bane of modern art; and the best argument in defence was, that academies were founded, *not* to supplant the older

* By Mr. G. G. Scott, R.A. Read at the meeting of the Architectural Association, as elsewhere mentioned.

system, but to supply its place after it had died a natural death.

I think, then, that—as in our own art this old system is still in operation in this country—we shall act wisely in accepting it as the legitimate *form* of our professional education, our true *point de départ*; and, ignoring all idea of disturbing it, to inquire whether it is doing its work fully, and whether it does not require some external aid to compensate for certain inherent deficiencies.

Now, there is a very wide distinction between architecture and the two other fine arts, particularly painting. *Painting* is purely a fine art, while architecture is also a practical art, a science, and almost a business.

If a young student were, as in old times, apprenticed to a great painter, what he would learn from him, and by assisting him, would, almost of necessity, be, in a greater or less degree, *fine art*. It is true that he would have, as in all arts and employments, a certain amount of drudgery and even of mechanical work; but the object, even of this, would be *fine art*. The profession he is learning has that for its sole and ultimate object; and if he take reasonable advantage of his opportunities, and have the right stuff in him, it must be fine art in some form that he learns.

With a student of architecture such is by no means necessarily the case. He may learn in an office the art of making working drawings, and of making, perhaps, good show drawings calculated to place a design favourably before an employer: he may learn the business of his profession, the science of building and construction, and a certain knowledge of architecture in the abstract, but may in a greater or less degree miss the fine-art element; nay, I would go further, and say that this higher element cannot be fully or more than incidentally learned in an office even if the master be in every sense an artist, much less if he have himself, as is too often the case in our day, only an imperfect appreciation of, and much more imperfect skill in, his art when viewed in its highest sense as a pure art. It is, therefore, clear that the student ought to have some means, readily accessible to him, of supplying this want which, even if our art were in its palmiest condition, must exist, but which is more palpable and more injurious in proportion as the feelings of the day tend to render architecture more of a mere profession and less of an art.

Do not let me be supposed to be depreciating my profession, or finding fault with its individual members: I believe there has never, in modern times, been such an awakening as now. It is this awakening which makes us feel our deficiencies, and daily groan under the consciousness of them. I am only telling you of what you all feel, and of what is to myself a constant source of self-accusation and of sorrow; and that such is the case is our best consolation, as consciousness of shortcoming is the best source of hope for amendment.

Let us, then, at once face the truth, and admit the fact, that unless a student takes some special means on his own account, he does not become educated as an artist at all, but only as a professional man; nor does there exist, that I am aware of, any recognised means by which he can avoid this monstrous evil.

For my own part, I am wholly unable to point out to my pupils, or to my own sons, any means of obtaining true artistic training, but the most accidental and irregular.

Now, when such is the case,—and it is so far more palpably than I should care to proclaim,—how can we wonder if our architecture do not take a position proportioned to our general civilization and our advance in other things? A great deal is said in these days of ours about architecture having merits wholly independent of ornamental art; about proportion, outline, light and shade, composition, the nice balancing of parts, the delicate and well-considered contour of mouldings, and a hundred other elements of beauty which a building may possess even if devoid of artistic ornamentation, and the absence of which may render the most ornate structure,—clothed with the finest art,—unpleasing.

All this is quite true, and I hold its truth as of most vital importance, but I feel convinced that none of these beauties can be attained in any perfection unless the architect has impressed his mind thoroughly with high artistic sentiment, and that their perfection will be the greatest when he is personally skilled in high artistic work.

All these merits are the result of a highly cultivated sense of beauty, a delicately-trained eye, and a judgment matured to a kind of instinct for the elements of beauty, and to an instinctive power of at once rejecting what is contrary to it, and of detecting the minutest faults in that which in the main may be beautiful. *And this is to be attained by true* artistic training, and is, *cæteris paribus*, proportioned to the degree to which this has been carried.

Let me not, however, be misunderstood. It does not follow that a painter or a sculptor, however talented, will design good architecture. We have every day before us the most lamentable evidence to the contrary. Artistic training must of necessity take the direction of the particular art to which it is to be applied. I do, however, assert the converse,—that if an architect would make himself so far a painter and a sculptor as to be able to conceive, and still better to design, artistic decorations of a high class, bordering on these sister arts, his mind and his eye would thereby become the better fitted for that delicate process of tentative designing and of refining of proportions, composition, and detail, which would render his works beautiful even in the absence of such artistic decoration; and I am quite sure of this,—that in full proportion to our neglect in these days of the high art of our profession, is the glaring prevalence of the want of correctness of eye, and of—I will not say a nice perception—but often of any correct perception at all, of proportion, and of those other elements by which beauty may be given to the simplest design.

Now, let us consider for a moment in what the fine art of architecture mainly consists.

In the first place, I would say that, as with the other fine arts, it does not lie in the means, but in the results; or if in any sense in the means, it is only in the sense of their necessity to or tendency towards results. The fine art of architecture lies in the artistic character and perfection of the architecture itself when carried into execution; and—though drawing and other means are necessary to this—it is clear that it must be just such drawing, &c., as is most conducive to producing the noblest architecture; and that the most exquisite drawing is wasted if it do not tend to this practical conclusion.

I do not, however, wish to be understood to depreciate other kinds of drawing or other artistic accomplishments in an architect,—far from it;—what I wish to urge is that the primary object in the artistic training of an architectural student is to make him a good architect, or, rather, to enable him to make his practical architectural works noble and artistic; that all else in the absence of this is futile; while, if this be attained, in a high degree, other accomplishments in art obtain a value and impart a charm of which they would otherwise be incapable.

Now, it is clear from this view that the making of good pictures of our designs or buildings is no part of the fine art of architecture.

It is, in fact, an art almost peculiar to our own day; but, though highly conducive to the success of the individual architect, and, when well directed, a great aid to the study of architecture, it is hardly to be viewed as a very direct means of producing good architecture. To make good pictures of bad designs is obviously injurious, as it misleads employers and often even the architect himself, and renders disappointment the more certain and the more bitter; while to make good pictures of good designs may have the beneficial effect of promoting their adoption, but still cannot be in any degree considered as of much importance to the actual result; for a well-studied design in artistic hands will be just as good, when executed, if no picture at all had ever been made of it; and an all-studied design no better for the finest drawing having been made to recommend it. This, then, it is clear is but a secondary art,—an elegant accomplishment which becomes both useful and elevating when added to practically artistic powers,—but worse than useless in their absence. Here I am happy to find Professor Cockerell's view to be as one with my own. After urging perspective drawing as essential to facility of designing, and also the necessity of cultivating the powers of the imagination, he adds:—

"Having thus put before you an outline of those advantages which are to be derived from our association with the sister arts, let us be guarded against their dangerous deductions. I look upon it that all their advantages are purely linear, and not aërial or polychromatic. * * * This great error of the English school of architecture may be said to have arisen from the juxta-position of architectural drawings in our exhibitions, to the works of the painter. * * * Colour, chiaro-scuro, and aërial perspective are of no sort of importance [*i. e.* in architectural representations]; and how entirely my opinion is supported by the best authorities and the best practice has often been laid before you. In one year in particular, I was enabled by the kindness of friends to lay before you some architectural drawings of Raffaello, Michelangelo, Sansovino, and Inigo Jones, in all of which proportion, composition, profile, and orthographic delineation were the sole end and object of their drawings, and no tricky effects of light, or shade, or colour were for a moment thought of or permitted. Philibert de l'Orme has humourously said, speaking of pretty drawings,—'They are bits to catch a customer, but are insufficient evidence of the substantial knowledge of the art. Be quite sure,' says he, 'that those who amuse themselves in making pretty drawings only, are those who least understand the real art and science of architecture. I do not deny,' continues he, 'that it is a graceful accomplishment in the architect to portray and paint, but his true business is with the model, and with lines only expressive of his design, its proportions and measures.'"

The power of ready and skilful *sketching* from actual architectural objects comes much nearer to the fine art of architecture. It is not that fine art itself, but it is one of the most direct means of attaining it. I, therefore, class this very much higher. It must not be mistaken for the practical result aimed at; but, as a general rule, I should say that it is so necessary to it as to be its closest ally and precursor, and, therefore, to be cultivated with all possible diligence; but I would urge the keeping of the ultimate object always in view,—viz., that sketching should be mainly followed up with the direct intention of self-culture; that the architect or student should aim in a less degree at storing his sketch-books with pleasing representations, and laying in a stock of precedents for future reference, than at the direct training of his mind and eye and hand to the conception and designing for himself of works similar in kind to those he is studying; and the kind of drawing which he should mainly aim at cultivating is that which will be the fittest means of conveying his artistic conceptions more clearly to the artworkman who will have to carry them into execution; the result being everything, the means comparatively nothing in importance.

Essential, however, as is sketching from existing works, I am of opinion that, both for the attainment of skill in this and in addition to it, the architect requires artistic training of a more direct kind, and this is my main object in coming before you.

The two wants, then, which I would desire to urge upon the attention of the profession are, first, a greatly increased appreciation of the necessity of such an artistic training as bears in the most direct manner upon practical results in our actual architecture; and, secondly, the want of some direct and special means of getting such training.

It may appear far-fetched, but I am convinced that one great object to be attended to is to give our students a good knowledge of the human figure, and of its introduction in architecture and in combination with architectural ornamentation.

This is important in the first place as a mere subject for training. The human figure is the most delicate and subtle, in an artistic point of view, of all natural objects; and its study is, consequently, the best training for the eye to a delicate appreciation of beauty. It is the highest of the works of creation, and its introduction in artistic works, of whatever kind, must necessarily give them a tone which no other objects can impart. We all know, and we most of us daily feel, how utter has been, for the most part, the neglect of this highest class of training, the very key and keystone to all the rest; and I am quite convinced that the general training of our architectural students to figure-drawing would alone work an absolute reformation in our architecture.

Since writing the above, I have found in one of Professor Cockerell's lectures the following passage:—

"And, to point out the advantages and disadvantages of our connexion with the graphic sisters, we are first to remember that from the painter and the sculptor we are to derive that knowledge of forms and profile, of contour, and that science of proportion, of which the human form divine has ever been considered to supply the model. It is quite certain that the Greeks derived from this association that exquisite sense of form and outline which so eminently distinguishes their works. * * * Their association of sculpture at all times with architecture, their system of proportions, derived, as Vitruvius expressly tells us, from the three proportions of the human creature, all display their practice and observation of all human, animal, and vegetable forms as appropriated to this art; and, when we consider the coarser practice of the Romans, * * * there can be no doubt of the favourable results derived by the Greeks from the association of architecture with the historical painter and sculptor. But the discipline of the sister art is, besides, advantageous in the highest degree to that dexterity of pencil and that facility of expressing and embodying his ideas, which, like elocution and language to the orator, become the essential instrument of his art."

I urge, then, that means be set on foot by

which our young architects may be able to get this training, and that not merely in an abstract form, but in a manner having a direct bearing upon architecture, whether in its sculpture, its decorative painting, or in any and all of the multitudinous branches in which the human figure can be introduced. I do not desire that the same person should be a sculptor and a painter as well as an architect, but I *do* assert that the severance of the three arts has been *and is* carried in these days to a degree, which is destructive to the highest qualities in our works, and that the only hope for the future is in their re-union, to such an extent, at least, as to enable the architect to assume his true position as the the *chief artist*,—the director of all the artists employed in carrying out that one great art which comprises and unites all the others.

Next to the human figure, I would mention the study of animal drawing, and of the introduction of animal life into architecture and architectural ornamentation. After the human figure, nothing gives such spirit and zest to decoration as the introduction of animal life; yet, in all our attempts to revive architectural carving and sculpture, we have hitherto utterly failed in this. We really, for the most part, dare not let our carvers introduce such objects for fear of making our whole works ridiculous,—and even a grotesque animal, as a gurgoyle, in which the Mediæval sculptors were so wonderfully successful, becomes in the hands of our own simply contemptible.

The architect of the future must be himself the leader and director of the artist she employs; and, if he desire to remedy such defects as this, he must take the lead by making himself master of the subject.

I urge, then, that animal drawing should be a very leading point in architectural training; and that not merely in a bare abstract form, but that the habits and positions of animals under all circumstances and conditions shall be studied, so as to enable him to introduce them with natural feeling and spirit into any part of his works and decorations.

Thirdly, I would mention designs from natural foliage and botanical productions. There is, as we all well know, great difference of opinion among those who are most in earnest amongst us on the question whether we should make use of foliage, &c., in its natural forms in our architectural decorations. I believe this question is gradually working out its own solution. I only allude to it for the sake of clearing my subject of it, and of saying that I view it as wholly independent of what I am urging; inasmuch as the study of Nature is equally necessary whether we follow her productions directly or in a conventionalized form. In either case the productions of vegetable nature are, and over must of necessity be, the primary sources of artistic foliated decoration. Closely as we ought to study the finest works of the best periods of our art, and all-important as are the lessons to be derived from them (and I may say indispensable as is the necessity of our linking our own art on to that of the past), I nevertheless assert that if we do this without reverting—and that in all earnestness and determination—to the works of nature as the great guides and suggestors of art, our efforts will produce mere lifeless results. I urge, then, a careful training of our architects to the study of the productions of vegetable nature, with a direct practical reference to their uses in architectural work. I would press this to a very great extent,—far greater than has been the case at any previous period of art,—inasmuch as our age offers greater facilities in that direction, and the knowledge of plants is carried to a far greater extent. The very habits of plants,—the forms they assume under different circumstances and conditions, and in different positions,—should be thoroughly studied and rendered familiar to the mind, and that quite independently of the question whether we make use of the lessons thus learned in a direct or conventionalized form; for, if the conventional be not founded on or quickened by an appreciation of the natural, it will, depend upon it, be a mere dead reproduction.

After these three great branches of natural study, and in fact intermingled with them at all points, comes the study of the finest existing works of art in each of these departments. The study of the human figure must be aided by that of the finest sculpture and painting, and the same applies to the study of animal life; but I wish here more particularly to dwell upon what is more distinctly architectural sculpture and decoration. Strongly as I have insisted upon the earnest study of natural types, I wish again to assert, in the strongest terms, my undiminished loyalty to the study of the works of our predecessors of the noblest periods of art. I do desire that nature should be studied instead of, but in addition to, and alongside of, these glorious works. I would not even separate the one from the other: they should be always going on *pari passu* as one and the same work. The one is the body, the other the soul: by one we learn architectural decoration in the abstract,—by the other we quicken it into a living art. I urge, then, that more attention than ever be given to training our students to draw from the actual productions of our art, but that it should be accompanied at every step by an equally earnest study from natural types.

It is not, however, by drawing alone that these studies should be carried on. The architect of the future must be able to model his sculptural designs, and even, perhaps, to carve them himself; but, as I am anxious not to render my advice impracticable by pressing too much, I will content myself on this point with urging that the student should receive regular lessons in modelling as well as drawing.

Hitherto I have dwelt wholly on form: there lies, however, before us the entire subject of colour; and if the study of form in its higher artistic bearings has been insufficiently followed up in our artistic education, how much more does this apply to colour! The very awakening in our day to a consciousness of this fact, hopeful as it is for the future, tends to aggravate the unhappiness of the present; for it has led to a multitude of attempts frequently so offensive to the eye as to make one long to be restored to the blissful ignorance of the past, forgetful that the folly of incipient wisdom is a necessary stepping-stone to maturer knowledge. I would, then, urge that our architectural students should have a systematic training, firstly in the true principles of colour, and secondly in its application to architectural decoration in all its forms.

I will not repeat what I have already said about the human figure and the study of animal and vegetable life, and of purely architectural precedent. All this applies equally to *coloured* as to *sculptured* decoration, with the addition of their study with direct reference to colour. This is, in fact, the highest form which our artistic training can reach: it is at the same time that most entirely neglected, and is that which demands the most earnest and determined efforts for its revival.

I have not dwelt at all on the ordinary study of architecture in its more normal form. It is not the subject I have had in view in offering my thoughts for your consideration; and I must rather be understood to assume this as a preliminary datum, taken for granted in all else that I suggest. I will, however, offer a very few observations on the study of that branch of architecture on which I feel myself most competent to speak; and what I have to say will appear, perhaps, inconsistent, and is, no doubt, somewhat humiliating.

In all really strong and healthful periods of art, the course of progress has, like the erection of our buildings themselves, gone on, as it were, course by course, each resting upon and founded on the form of its immediate precursor. The architecture of one generation was the result of the study of that which immediately preceded it. The architecture of the pupil was founded directly on that of his master. I will not go so far as to say that such is not, or in some degree ought not to be, the case now. To any one who can give an unprejudiced consideration to what goes on around us, such a regular progression will be found in some degree to hold good; but, while urging as stoutly as any man that an architect should be guided by the exigencies and peculiar circumstances of his own day, I am bound to say that one of its most marked conditions has been, till recently, that it possessed no distinctive architecture of its own, and another that it *does* possess, in a greater degree than any previous age, a knowledge of the architecture of the past. I urge, then, at all risks and in all earnestness, upon those who intend to follow the revived Mediæval styles, that they must learn their architecture, in its normal and abstract form, by the study of ancient examples; and though our own architecture, like our structure, may be built up course by course, that of the best periods of the style must be viewed as the rock whence those succeeding courses are hewn. I urge, then, the most ardent loyalty of the time-honoured custom of diligently and earnestly visiting, sketching from, and measuring ancient works of art (whether of architecture proper or the allied arts), as the one great means of getting a real knowledge of architecture.

I press this the more strongly as I am quite convinced by the productions of a large number of our "Gothic" architects that they too much neglect this. Their works often evince a great want of actual knowledge of the style they are working in, while the constant confessions of young men seeking office employment afford but too convincing proof that the study of old examples is rather the exception than the rule, and that young men are allowed to suppose that architecture is learned in the office, or from modern works, instead of from the study of ancient examples.

I lay the greater stress upon this as I fear it is an increasing evil. At one time no one was supposed, by any one capable of thinking of the subject, to know anything of Gothic architecture who was not *known* to be one of the small band of ardent students of ancient work: now, however, the greatness of the demand has created a supply of men who have not been impelled by real love of the art, but by its necessity as a matter of business, and these men naturally fail to impress upon their pupils feelings and modes of study of which they are themselves innocent. I often meet with young men who have gone through their period of pupilage, and profess a strong predilection for Gothic architecture, who have rarely, if ever, sketched from an ancient building; and they usually say that their masters never would give them any time to do so!

I wish to say, once for all, that such neglect is simply destructive, and that no one has a right to attempt the practice of Gothic architecture till he has prepared himself by a long course of diligent study of the old examples. I am not advocating copyism, but knowledge as the foundation of practice. Let an architect be as original and as inventive as he pleases, but let his originality and invention be founded on a basis of knowledge, and not, as much so called originality most obviously is, on a foundation of ignorance.

One more word on architecture proper.

One of the most glaring defects in the works of English architects of the present day (I do not, of course, refer to those of the better class) is the evidence they afford of the want of eye. This defect is destructive to numbers of works which would otherwise possess some merit. You continually see a window or other feature not badly conceived, but rendered utterly offensive by some glaring discord in the proportion of its parts. This clearly results from simple inability to perceive—I will not say the niceties, but—the very first principles of proportion,—a want of culture of the eye. I have often feared that it might be a natural obtuseness of perception on the part of our race, it prevails amongst us to so serious an extent. I am, however, convinced of the contrary by its entire absence in the works of the Middle Ages, and for the most part in those of the intermedial period. In all or the majority of these, we find evidences of an almost instinctive perception of the niceties of proportion, while the merits of our own day seem to point in the very contrary direction. I will take the liberty, while on this subject, at the risk of repetition and of some irrelevance, of transcribing a passage from a paper which I read two years since at the Architectural Museum, in which I addressed the following advice to architectural students:—

"It is ridiculous to suppose that such an art as architecture is to be learned without the most careful study of its existing productions, or that originality is likely to be developed upon a basis of ignorance; and it is equally unlikely that excellence will be attained solely through the medium of knowledge, without the most jealous and careful training of the *eye* to the most delicate and scrupulous perception of the *right and the wrong* in form and proportion. The want of this is the most crying sin in modern architecture; especially, I fear, in this country. Continually is the more cultivated eye offended by discords which in music would set the very teeth on edge. I know not how to advise you on this point. This delicacy of perception is in some degree intuitive; but that it is not wholly so is proved by the fact that the works of some periods are nearly all harmonious, while at other periods this harmony seems only occasionally to have been attained. The only rule I can suggest is the jealous cultivation of the eye. As the greatest of moralists has said, 'Keep thy *heart* with all diligence, for out of it are the issues of

life;'—so one may say to the architect, 'Keep thine *eye* with all diligence, for out of it are the issues of *art*.' Never allow your eye to get accustomed to or condone errors of proportion, even in works which in other respects you venerate for the noble art which clothes them; and much less allow of any deliberate error in your own designs. To avoid these blemishes sketch your designs over and over again,—no matter how slightly and roughly,—rejecting rigorously everything against which the eye rebels, and never permitting a proportion which it has once condemned to remain, even for a minute, before you: for ocular perception is most delicate, and its instinct may be blunted by dwelling even for a few seconds upon what its first impression saw to be wrong. Never clothe a form with detail or with pleasant drawing till its proportions have been thoroughly sifted and rigorously corrected; and if you fear that you have, by dwelling too long or too indulgently upon what you have sketched, prejudiced your eye in its favour, put it away, and attend to something else, or take the opinion of some unprejudiced person in whose correctness of eye you have confidence; for the first impressions of another will often correct your own.

"As to obtaining a knowledge of actual architecture, I cannot too often nor too strongly urge careful sketching from first-rate examples. The student of Classic architecture is under a disadvantage, as its original and best examples are in other lands; but with those who pursue the other great branch of architectural art, the case is very different; for, though in most parts of Europe he will find constant and ever varying objects of study, he can never go far from home without finding among the monuments of our own country productions equally deserving and equally instructive. To the student, then, of Gothic architecture, I would concentrate my advice on this point in one word—'SKETCH;' and if any one advises the neglect of this, I assure you that he stands, *ipso facto*, self-condemned as a false teacher. I want you, however, to add to this a great deal more: I want you to obtain distinct and precise instruction in art in all its bearings upon architecture: I want to urge upon you to study figure drawing; animal drawing; the drawing of foliage, whether natural or architectural; the combination of figures and animals with foliage; the designing of coloured decoration in all its branches; and of every other art which bears upon architecture. I want to urge upon you the necessity for the systematic learning of all these kinds of drawing, and the obtaining of a perfect mastery of them; and not only this, but that you should learn, in some degree at least, the actual practice of these arts. Human life is not long enough to do the latter thoroughly; but now, in the days of your youth, you can do it to a certain extent, even at the sacrifice of a few frivolous amusements. You have embarked on a noble art: make its cultivation take the precedence of all inferior pursuits. To effect this, I am disposed to think that combination is necessary. A society of students might be formed, and aided by others, for obtaining the best instructors in all these branches of art, which each student singly would find impossible. I earnestly commend this to your united consideration. And, above all, do it at once, or your own individual share in the coming reformation will be lost."

It is, however, more than time that I should come to the practical gist of my paper. It is quite clear to me that every architectural student should, during the entire period of his pupilage, in addition to the practical teaching he obtains in his master's office and to his studies of the practice, the science, and the literature of his art,—be going through a constant course of direct artistic training of the kinds laid down in the foregoing suggestions, and that the same training in a still higher form should be continued as much longer as circumstances will permit.

The practical question to be considered is how this is to be provided for, as at present it is impossible. It may be said, perhaps, that the *Institute* ought to provide for this. It may be that it *ought*; and judging from the evidence given by the late Mr. Papworth before the Commission of Science and Art, in 1836, I believe the founders of the Institute had some such intentions; but I doubt very much whether it will ever be done, and "while the grass grows the steed starves." It may further be said that the Royal Academy ought to do it. I strongly hold, that so far as relates to its own students in architecture, it is its bounden duty to do so, and I am happy to say that this duty is acknowledged, and there is a prospect of its being acted up to as soon as practicable. I would mention, however, that instruction given by the Academy can never supply the wants of the profession, and must always be the more advanced, and not the elementary teaching; indeed, the same is now the case with the students of painting and sculpture, who are expected to have gone through their elementary training, and made considerable progress previously to their admission as students at the Academy.

Again, it may, perhaps, be said, that the required facilities are already offered at the schools at South Kensington. Those schools, I would reply, are admirable in their intent, but were founded for a wholly different object:—to supply artistic instruction to the manufacturing artisan. It is true that they go much beyond this in practice, and that their organization is far more perfect than anything which we can hope for. I go even further than this,—and I take this opportunity of saying it as publicly as I am able,—I think the collections of objects of art (added to their library and to our Architectural Museum) offer such wonderful advantages for study that I would urge upon every student of architecture, if he has nothing else to guide him in the choice of his place of residence, to seat himself down as near South Kensington as he is able, that he may enjoy the extraordinary facilities for art-study which this great establishment offers, and which probably exceed what is to be met with in any city in Europe. Still, however, I cannot imagine that members of such a profession as ours would desire to be dependent on the schools of manufacturing art for their own artistic training, if they can obtain it by any means more distinctly their own.

I will now offer for your consideration the result of my own long and anxious consideration of the subject.

I am convinced that we shall never obtain for our architectural students that artistic training which we know to be necessary unless we put our own shoulders to the wheel and provide it ourselves. I would, therefore, propose that a central School of Architectural Art shall be founded in London (probably in these very rooms), in which all those branches of high art which I have enumerated as bearing upon architecture shall be taught by men of the highest ability in their several branches, these several teachers being paid so liberally as to secure both the best men and their best exertions; that this school shall be mainly self-supporting, though aided by annual subscriptions from individual architects, and, perhaps, by grants from the Institute of British Architects, your own Association, and any other societies which may be willing to afford aid, the self-supporting element being a regulated payment by the students; for it is quite certain that the students of such an art as ours do not desire to have instruction on any terms short of its proper value, though they will be too glad to obtain, by means of a combined effort, teaching of so high a grade as would have been impossible to procure by private means; that this school of architectural art shall be under the management of a board of visitors, to be jointly appointed by the council of the Institute and the council of this Association (and which shall, if possible, include one eminent painter and one eminent sculptor) a certain proportion of its members retiring every year, and not being re-eligible for two years. That the teachers be elected for terms of one or two years, open to re-election, and shall be as numerous as the board of visitors deem necessary; as, for example, a teacher of drawing from the human figure, and a teacher of modelling the same (these two duties being open to be performed by the same man); a teacher of animal drawing, if the last named cannot undertake it; a teacher of drawing and modelling architectural ornamentation; a teacher of coloured decoration, &c.; the number being always dependent on circumstances and on the judgment of the visitors. There may also be occasional teachers of special subjects, such as the designing of stained glass, of mosaic, and many other branches of art; the great principle aimed at being the power and the command of funds to be attained by combination,—in fact, the self-supporting element of the institution.

Every architect who joins it should consider himself as bound in honour to use all his influence with his pupils to become students, and every student should be under the same obligation to give as constant attendance as possible. The instruction may be enlivened, from time to time, by lectures,—not the casual papers customary at meetings of societies, but *paid* and *practical* lectures, by men of known eminence in their several departments of art. Each year there should be a competitive examination of the students with prizes in their several departments, followed by exhibitions of the performances of the students. In fact, everything should be done to offer incentives to the most strenuous exertion, and to inspire the students with an ardent enthusiasm for self-culture, and for using every possible endeavour to attain eminence in the noble art which they profess. The students at this school, when they become students at the Royal Academy, would enjoy, as I hope, still further facilities, when the intended regulations may come into operation; but we want immediate action, and this we must take for ourselves: our art is literally starving for want of artistic instruction: the want of it has clipped its very wings, and renders it impossible for it to attempt any lofty flight. Two things only are needed to correct the evil,—a full and heartfelt appreciation of the intensity of the need, and an earnest and determined combination to meet it. I have done my best to suggest the mode of action, and I now solemnly and in all earnestness commend it to your immediate and energetic consideration. It is a strictly practical question which I take the liberty of submitting to you, and one on which the very life of our art depends. Do not, I beg of you, weaken it by hooking other questions on to it, or by raising difficulties,—by looking out for "lions in the way." Face it, I pray you, in its simple form, and with a determination to meet it, and you will cover yourselves with honour, and merit the lasting gratitude of all lovers of our glorious art. I appeal to you in the first instance because you have already been the first to show your appreciation of this great need, and to give substantial proof of that appreciation by taking many practical measures to meet it. I now beg of you to do this on a larger scale, and in a manner both worthy of the greatness of the object and commensurate to the magnitude of the necessity. "I speak to wise men," and beg of you to "judge what I say," and I do so in all confidence that my appeal will not be in vain, and that you will come forward and rescue our noble profession from the disabilities under which it is absolutely groaning, and place it on a level worthy both of its glorious mission and of the great period of civilization under which Providence has cast our lot.

If you do this we may once again see our England the glory of all lands in her architecture, as she is in so many other of her practical undertakings.

THE PUGIN MEMORIAL.

ON Monday last, the duties of the committee were brought to a close by the execution of the deed of trust by the president and council of the Institute of British Architects. The proceeds of the fund, after deducting working expenses, have been invested in the purchase, in the name of the Institute, of 840*l.* perpetual 5 per cent. preference stock of the London and North-Western Railway Company, which will afford the Pugin travelling student the sum of forty guineas annually in aid of his expenses. The administration of the fund for 1865, the first year, will be by a joint committee of members of the Institute, and of the late Pugin memorial committee, but in subsequent years it will be in the hands of the Institute. The name of each Pugin travelling student is to be engraved on a plate, and affixed in some conspicuous part of the Institute rooms; and it is understood that a Pugin Medal will be struck at the cost of that body, and presented to each student at discretion.

Thanks are due to Mr. Joseph Clarke, especially, for this successful result; and to Mr. T. Bury, who acted with him as joint hon. secretary.

THE ARCHITECTURAL MUSEUM.

SOUTH KENSINGTON MUSEUM.

IT will be remembered that the committee of the Ecclesiological Society offered 5*l.* 5*s.* as a prize for coloured decoration, to which Mr. Beresford Hope added 3*l.* 3*s.* for one or more extra prizes. Instead of selecting an ancient subject, as on former occasions, the committee

chose one of the prize *miserere*s of the wood-carving competition of the present year ("Gleaners") as the subject for the competitive colouration. Fifteen casts were sent in competition, and the Ecclesiological Society have awarded the colour prizes as follows:—Prize 1, 5*l*. 5s., to Mr. Alfred Hassam, in the employ of Messrs. Heaton, Butler, & Bayne, glass-painters. Prize 2, to Mr. Joseph Peploe Wood, of No. 35, Brown-street, Bryanston-square, the first prize-man in the last competition. An extra prize of 1*l*. 1s. to Mr. Edward Sherwood, of the above address. He was found to be a nephew and pupil of Mr. Wood. The distribution of these and the wood-carving prizes will take place on the 15th instant.

The award of the colour-prizes has our full concurrence.

ART-UNION OF LONDON SCULPTURE COMPETITION.

FIFTEEN statues and groups have been submitted in reply to the offer of a premium of 600*l*. for the best one when executed in marble, and are now open to the public in the north court of the South Kensington Museum, by permission of the Department of Art. The council have been informed of three other statues despatched from foreign parts, which have been detained by accident or damaged in transmission.

The subjects exhibited are the following, keeping the order in which they stand:—Lady Macbeth (a caricature); Rebecca; Sampson breaking his Bonds (finely modelled in parts; but in repose, not action); the Lady of the Lake,—

> "With head upraised and look intent
> And eye and ear attentive bent;"

(head and hands charming, body and foot less so); the Queen of the May; the Spirit of Storm (picturesque and clever, but only a sketch; not a "finished model," as required by the instructions); a Wood Nymph (a very fine group; the head of the nymph less satisfactory than other parts); Innocence entreating Protection of Justice (the principal figure admirable); Beauty spell-bound by Love: Imogen entering the Cave (lower limbs beautifully modelled; position of the right arm doubtful); Euphrosyne and Cupid (has surely been exhibited before); a Pièta; Summer (good, but smaller than the required size); Lurline (head not without beauty); and Diana sleeping (wherein sleep is cleverly expressed).

If we were called on to name the four from which the successful statue would probably be selected, we should give, without placing them in order of preference, the Wood Nymph; Innocence and Justice; Imogen; and the Lady of the Lake.

The council will meet on Tuesday to proceed with their award.

THE INFLUENCE OF LOCAL SCENERY ON LOCAL ARCHITECTURE.*

AFTER a few introductory remarks, Mr. Neale proceeded to say, It has been my happiness during the last fifteen or sixteen years to see as much of the out-of-the-way ecclesiology of Western Europe, from the Vistula to the Atlantic, as has fallen to the lot of most; and therefore I thought that, on an occasion such as this, when one who has no professional or technical knowledge of a science has to speak of that science, it would be in every way more seemly, more modest, and more interesting to others, to dwell on that which it requires no professional eye to appreciate;—the marvellous beauty with which the architects of the Middle Ages adapted *the* particular cathedral or church to *the* particular locality,—sea shore, river side, mountain top, hill slope, wooded dell, and where not else?

And as there is nothing like an example to illustrate a general law, I will tell you what first brought home to my mind the wonderful power which Mediæval architects possessed in adapting *the* building to *the* spot;—the town where I live (East Grinstead). It crowns the summit of a rather steep hill; a hill, one of the links between the southern downs of the vale of Holmsdale and the northern backbone of Sussex. Some eighty years ago, its church was a late Third Pointed affair,—the general outline pretty well; the details, I have not the slightest doubt—all Sussex Pointed is very miserable; but from sketches that I have seen of it,—great hulking thing as it was, flattish roofed, with two enormous aisles to its chancel,—it must have harmonized admirably with the slope of the hill on which it stood. It fell down in '86; and, for a wonder, a Gothic erection took its place: the tower, for the time, admirable; but the nave! not one view—north, south, east, or west—can you get of it where—so far as the eye is concerned—it does not destroy the landscape; a hideous, lean, straight-backed thing, not only ugly in itself, but spoiling the contour of a very lovely green hill. That is not the way in which the old men built. I am not about to enter into the philosophy of the matter,—only into some of its details. Now, first, let us look at some instances of ecclesiastical buildings perched on the very summit of an abrupt precipice, or, anyhow, scarped hill. Of all the cathedrals that I have ever seen, that of Bragança has, to my mind, the most glorious position. It is perched on the northern side of the infant Douro, just escaped, under that Portuguese name, from being the Duero of Spain. The cliffs, splintery, shattered, here and there needlelike, are tossed about, both on the one side and on the other, in a sort of chaotic grandeur. The cathedral stands on a plot of ground of which part is absolutely corbelled out from the precipice. It was built in 1510. Christian architecture in Portugal, instead of dying the long death of Elizabethan and Jacobean in England, or the half Flamboyant, half so-called Classical style of Francis I. and Henry II. in France, went at one leap from such buildings as the royal chapel at Batalha, and the church at Belem, whose capitals, bosses, pendants, corbels, are wonderful mixtures of contorted foliage, lizards, devils, angels, legends, crests, and all that an almost frenzied imagination could produce, cut with a chisel, the effect of which, no word-painting, not even Ruskin's, could describe, fell down at once into the simplest of all, so-called, classical work. No one can, in itself, admire Bragança; but there it stands, a part, as it were, of those jagged, splintered mountains, actually leaning over the tremendous abyss, solid, stern, simple; and by its very contrast, to a certain extent, harmonizing with the gorge of the Douro.

One of the most remarkable churches, pitched, as it were, on the very apex of a needle-like hill, is that of St. Michael, at Le Puy, in Auvergne. The ascent, steep, and in some places not over-safe,—taking advantage of a projecting bit of rock here, nestling itself into some little coign of vantage there,—lands you suddenly—in mid-air, so it feels to you—at the loveliest of Romanesque doors; and from that needle-rock, as if it had caught the very spirit of inanimate nature, towers up, contrary to the genius of Romanesque, this gem of a chapel. The most interesting example of a church pitched on the very summit of a hill, is that of S. Odille, in Alsace. The chapel itself is a very lovely specimen of Rhenish Romanesque: but it is its position, tossed up, if we may so say, on its own appropriated mountain,—one of the many truncated cones of which the chain of the Vosges consists, that gives it its especial interest. Within thirty miles of London there are three having a certain relationship with each other, all in the same diocese, which two of them at least — are curious examps of the way in which a gentle eminence, —that is, gentle for any country but England, — may be capped with a chapel, so exactly suiting, if we judge from their remains, the contour of the hill, and the general character of the surrounding scenery. These are the chapels of St. Anne, St. Martha, and St. Katherine, all in Surrey. St. Martha, the only one which is perfect and in use, is that which crowns the hill of its own name to the right of the Reigate and Reading line. St. Katherine, a very singular ruin of the fourteenth century, is in the outskirts of Guildford, and gives name to the tunnel, as the same line drives through the hill on which it stands. St. Anne's—a name so well known, from its hill having been Fox's country seat—has disappeared. The once cathedral-church of St. Bertrand is a noble example of the same position. It crowns a solitary conical mountain, one of the detached vanguard of the Pyrenees. Height is its distinguishing feature: a western tower of very noble Romanesque; a nave without aisles, begun in 1304, and finished in 1352; and a choir with eleven chapels, partly Pointed, partly Renaissance, finished on Christmas-eve, 1535. The want of aisles, sadly felt in the interior, gives an imposing appearance of greater height. It has a most magnificent situation. There it stands, isolated in the foreground, the whole central line of the Pyrenees behind it.

The very steepest hill crowned by a church and town duly round it, is that of Durem, in Portugal, so excessively steep, that Portuguese ponies, excellent climbers as they are, can hardly scramble up here, and within the walls of the town a wheeled carriage has never been. The opportunity, however, is quite thrown away: the church is a classical building, and nowise even as such remarkable. The chapel of St. Odile, in Auvergne, occupies a noble position. The mountain at first swells feebly up from the plain, but at the south-west there is a rock which, projecting from the mass, overhangs, in the most romantic manner, the depth below; and on this, and projecting over the abyss, is the Chapel of the Angels.

Referring only to the cathedrals of Durham and Laon, I will but mention one church more, which occupies the summit of a hill, and that a long remarkable one—the Abbey church of Thomas, in Portugal. It is said to be the largest monastery in Europe. There were nine great quadrangles, besides outbuildings of different kinds, and several detached chapels. The longest façade was something over half a mile in length. It is a very curious and a most touching thing to see now, amidst fields of maize or wheat, or barley, a high tomb of some knight or some ecclesiastic, the cold, dark, motionless stone, so curiously contrasting with the young, green, waving life of the field itself. The whole place,—monastery, church, chapels,—is now desecrated. We can form some conception of what must have been the glory of our St. Alban's, or Glastonbury, or Sion House. But Glastonbury could not have occupied the sixth part of St. Thomas so far as it bears on our subject. Thus it is: from the valley of the Gezere, a huge, in itself ugly, half hill, half mound,—something like Plinlimmon in shape, lifts itself up. The summit, to the extent of which I have already spoken, nearly half a mile on every side, is enclosed for, cut down to, made use of by, these nine quadrangles. But the hill still rises within till it terminates in a kind of backbone,—hog's-back, as we should say in England: and on that hog's-back, which itself slopes up from end to end, the church is built. The thing itself is Late Flamboyant. The choir is unique in Europe. The choir itself is sixteen-sided, and of Late Flamboyant. It is united to the nave by a kind of passage, for which no ritual that I am acquainted with has a name. The altar stands in the centre. Around it is an octagonal erection, the eight arches leading on into a Late Flamboyant dome. In fact, here you have a gigantic tabernacle. But this dome terminates in a pier, which pier, rising to the height of some 35 feet, branches out into the sixteen ribs on which the vaulting of the stonework of the external chancel rests. This choir stands, exactly and precisely, on the summit contained by the nine quadrangles of the hill on which those nine quadrangles stand.

Now let us proceed to another situation. I mean where a broad river, or a lake, exercises an important influence; if it did not on the original erection, anyhow on the present beauty of the church.

The cathedral of Vienne, among French cathedrals, occupies a place in the third class: among Late Flamboyant buildings it stands very high. A broad flight of some thirty or forty steps leads up to the western façade from the Rhone. To my mind there is exquisite contrast between the broad, silvery, lazy, overlapping waves of the idle river, as it floats past—for it is floating rather than flowing—and the sharply-chiselled cusps and foliations and pinnacles and ogees, and delicately carved doubled towers of the late cathedral that hangs almost over its side.

On that I might dwell at much greater length; but I would rather speak of a cathedral church which may be, even by name, unknown to most of you. I mean that of Maribœ, in the island of Falster, in Denmark. Of the general character of Danish churches, I shall hope to say something presently: of this I wish especially to speak as regards its situation. The western façade *gives* (as the French would say) on a little inland lake;—speaking from memory as to the lake (though not as to the church), I say a piece of water of about four acres. Of the colour of the church more directly. But imagine such a cathedral as St. Asaph set down on a sandy plain, surrounded on all sides but the east by the pines and beeches and oaks which make Denmark so beautiful; while, on the east, the little ripples of the lake are continually lapping (and never more than that) against the

* By the Rev. J. M. Neale. Read at the Architectural Museum, as mentioned in our last.

basement mouldings of the chancel. The church itself is not especially remarkable among Danish churches; but its situation, jutting out as it does into a quiet inland lake, stretching away infinitely to the east, but on the north and south skirted, when I saw it in spring, with the lovely contrast of young beech and aged fir: the whole taken together made me think it one of the most marvellous ecclesiological landscapes that I had ever beheld.

Let me now say something as to the localised influence of colour. We are all, I suppose, agreed that a thorough understanding of the power of brick is one of the chief necessities of a modern architect; and, therefore, I often wondered that our architects, who have so often been, and will be more and more, compelled to build in brick, should not have made a study of Danish ecclesiology. In Alsen I made my first acquaintance with Danish brickwork. In the islands, in Acroe, in Falster, in Moen, above all in Lealand and in Zealand itself, we learn what local necessities can do in originating a local style. It is clear that, from whatever reason, stone was utterly unobtainable by the Mediæval architects of Denmark, except for some such great effort as the cathedral church of Roeskild, the virtually, though not nominally, metropolitan church of Denmark; and the truthfulness and honesty with which they carry out their material are admirable. Only in one instance, so far as I have seen, are their bricks cast in any other form but that in ordinary use. This one exception, and it is not very frequent, is the curved brick necessary for the formation of a flat-headed ogee. Otherwise, the external ornamentation—and most richly ornamented are the churches,—consists of bricks alternately projecting square, and therefore depressed square,—lengthwise or breadthwise,—narrow side, horizontal, or perpendicular, or projecting, in angular fashion. The east end is almost always flat: there is generally in the twelfth and thirteenth century a very strongly-marked decorated moulding under the gable: very frequently, by the simple process of omitting four bricks, a cross is formed—the centre of that gable. In Romanesque examples, which almost always have three equal windows in the east end, the arch is formed of a brown, gritty, ugly sandstone. I never saw a church which so perfectly astonished me as that at Middlefart. Throughout the whole building there is not a single effect produced which could not, in its way, be worked out with those little wooden bricks which are children's playthings, provided glue might be used.

Having alluded in detail to several of the Danish churches, the lecturer proceeded: I was walking one evening, towards the end of May, from Odensee to Middlefart. As the sun was setting, I reached the brow of Denmark,—a very steep and high hill. I should even think it did not fall very far short of Holborn-hill. And then, looking to the southward, and catching the churches which cluster there as thickly as even in Leicestershire, that rich deep tint which six or seven centuries impart to brick, drawn out to its full in the red rays of the setting sun, I thought that I had never seen a more lovely ecclesiastical landscape. And a curious proof from the opposite side of the question was this. A few days after, I was at Cologne. I know no view which I admire more in its way than that of the city as seen from the other side of the river. I arrived there late at night. The first thing on waking in the morning, I went to the window to feast with it once again. I could not imagine what made the whole scene so tame and insipid; but then I remembered, that for a month before, I had been in churches that possessed the richest and deepest of external colour.

Having alluded to the castle-churches of Europe, the lecturer concluded by urging upon architects to do their duty by those materials which God had been pleased to put in their power, and not look for materials which were beyond their reach. Anybody, could he have his wish, would desire stone to build with, money to build with, and a good situation to build in; but the true architect, the brave Christian artist, would build a real Christian temple according to the oldest architectural rule, that of King David—iron for things of iron—brass for things of brass: he would build thankfully and well, with brick if he could not get stone,—and he might build most beautifully with brick: he could even build of mud a Christian building worthy, so far as anything made with hands could be worthy, of the glory of Him for whose service it was erected.

A vote of thanks to the lecturer terminated the proceedings.

THE TEACHING OF THE INSTITUTE OF ARCHITECTS.

THE remarks of "M. A., Cambridge," in the *Builder* of last week, are sound and wholesome. We are so much accustomed to hear and see "the small doctrine of small men" propounded by "mediocrities of to-day," that it is consoling to find men like "M. A." publicly denouncing that doctrine. But why should he suppose that the President of the Institute and the Professor of Architecture in the Royal Academy are implicated in any such foolish "teaching?" and why should they be called upon to repudiate what they have never adopted? What has either of them ever said, done, or written, that could lead to the presumption that they disregard the teachings of Classic art, or countenance the trash so effectively shown up by "M. A.?"

If the senior members of the Institute are to be held responsible for the escapades of these unfledged little ones, their position in the Institute would indeed soon become untenable.

S. S.

ARCHITECTS' BENEVOLENT SOCIETY.

THE annual general meeting of this society was held at the House, in Conduit-street, on Wednesday last. Great pressure of matter forces us to postpone a report of the proceedings till our next.

ENGINEERS' FEES.

THE Ashbury Carriage Company engaged Mr. Fothergill, mechanical engineer, to take stock of the materials at their establishment at Openshaw. Mr. Fothergill charged ten guineas for each day of six hours, and his bill amounted to 1,470*l.*, payment of which was refused. An action was brought to recover it, and the Lord Chief Justice, in his summing up, admitted that a London engineer of repute might properly expect ten guineas for each day he was engaged. *The Engineer*, commenting on the subject, says,—"A ruling of this kind is useful, as a precedent, and as fixing, in the minds of those to whom the knowledge is new, the *minimum* rate at which engineering services may be pecuniarily estimated."

AYLESBURY CORN EXCHANGE AND PUBLIC MARKET COMPANY.

A COMPANY having been formed at Aylesbury, in the county of Bucks, and incorporated by Act of Parliament, for the purpose of building a corn exchange and general market, the directors have purchased the site of the White Hart Hotel, and are about to erect upon it buildings from the designs of Mr. David Brandon, comprising a corn exchange 90 feet long by 45 feet wide, and adjoining rooms to be used as offices, reading-rooms, &c., and covered market for 100 stalls, with capability for extension. The capital of the company is 18,000*l.*, with limited powers in addition, and the share list having nearly been filled up, the works will be begun as soon as possible.

COMPETITIONS.

Louth.—The committee for erecting the proposed new church on the site now occupied by Trinity Church, have so far succeeded in raising the necessary funds as to enable them to request architects to send in designs for the edifice. It is to be handsome, but plain; to be capable of holding not less than 650 persons. The walls are to be of Ancaster stone, and the sittings open, and of stained deal. The sum to be expended is 2,500*l.*

Museum and Albert Memorial for Exeter.—Twenty-four designs have been sent in for competition, and a sub-committee has been appointed to select the designs entitled to the first and second premiums. After the award the plans will be exhibited to the public.

Hackney Town Hall Competition.—The Vestry having invited twelve architects to compete for the proposed new town-hall, seven designs were sent in, and the Committee appointed to examine and report on the same have approved and selected the design marked "Nota bene," the author of which is Mr. Sancton Wood, architect, Craig's-court.

The New Town Hall of Drogheda.—The committee for the purpose of selecting a design for the above building having invited a select number of architects to compete, several designs were submitted by the following gentlemen:—Messrs. Lanyon & Lynn, Mr. W. F. Caldbeck, Sir Thomas Deane & Son, Mr. G. Barre, and Mr. J. M'Curdy. After a close examination, two designs were selected as being most suitable—one bearing the motto, "Veritas," the other "Utility and Economy." On the first voting, both had an equal number of supporters, but on a division, the casting vote of the mayor turned in favour of the former, which proved to be from Mr. Barre, of Belfast. The other was from Mr. Caldbeck, of Dublin, to whom was awarded a premium of thirty guineas.

THE EAST LONDON BANK COMPETITION.

THE "Architectural Alliance," in a communication signed by the president, vice-president, and honorary secretary of that association, have addressed the directors of the East London Bank, and pointed out the objectionable nature of the instructions issued, to which we drew attention last week. If the directors do not change their terms, architects who submit drawings will discredit themselves. It is time that competitions for private works were refused altogether.

THE DECORATION OF THE STRATFORD-ON-AVON FESTIVAL PAVILION.

WE have received complaints from one of the competitors for decorating the pavilion, to the effect that the artist selected had sent in full-size specimens of his work, and that these placed the other competitors at a disadvantage. We are bound to say that, so far as the circumstances are before us, we see no ground for throwing blame on the committee. In such a competition it would seem to be quite an allowable act to receive from competitors evidence of ability to carry out their designs. Of other circumstances connected with the selection we are not in a position to speak.

The competitors who responded to the advertisement in our pages were nine in all. No. 1, Messrs. Allsop & Son, Stourbridge; No. 2, Mr. Robardt, Duke-street, London; No. 3, Mr. S. L. Coulton, Robert-street, London; No. 4, Mr. G. Arden, Broad-street, Worcester; No. 5, Mr. A. R. Snelling, Alexander-street, Old Kent-road, London; No. 6, Mr. Holland, Warwick; No. 7, Mr. J. Walker, Stratford-on-Avon; No. 8, Mr. Brothers, Leamington (accepted); No. 9, Mr. Callaway, Stratford-on-Avon. The committee, in their report, recommended that "one of the designs numbered respectively 1, 3, and 8, be selected. In No. 1, completeness of detail and excellence of appointments will claim your attention. Nos. 3 and 8 possess very great merit: in purity of style and harmony of colour they are all that could be desired. No. 8 also shows excellent workmanship in the specimen submitted with the design."

The building is dodecagon: nearly all sent in elevation of one or two bays of the inner circle: about two were in perspective.

THE SHAKSPEARE TERCENTENARY.

The Working Men of England.—Thanks to Mr. Tomlins and Mr. Banks a movement has been organised to enable the working men of England to assist in the celebration.

The City.—A committee is being formed in the City under the presidency of the Lord Mayor. The Lord Mayor has been too timid in the matter.

Clerkenwell.—At the vestry meeting last week Mr. M'Donnell called attention to the Tercentenary, in celebration of which a local committee had been formed, but they were at a loss for a place of meeting. His request, in conjunction with other members of the vestry, was that the committee be permitted to meet in Mr. Paget's room once a week, when it was not required for the purposes of the Board; as such permission would confer a great favour upon the committee. The request was unanimously granted.

Stratford-on-Avon.—Mr. C. H. Bracebridge, in a letter, recommends that the monument to be

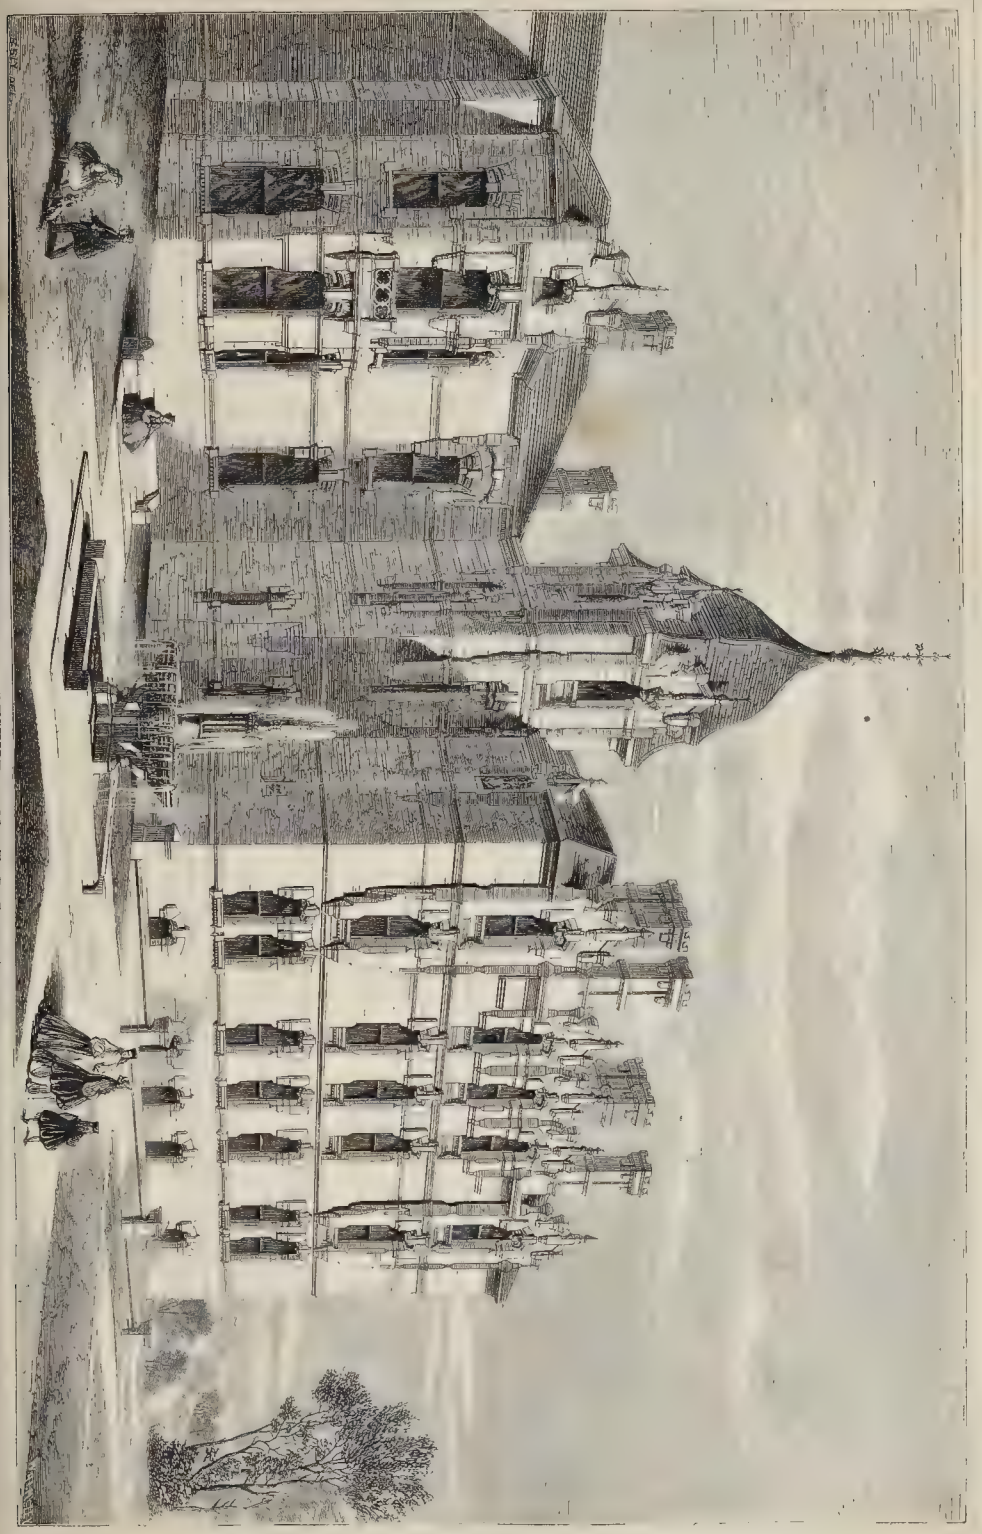
NUN APPLETON, YORKSHIRE.——*Plan of Ground Floor.*

erected at Stratford to the memory of Shakspeare, should consist of a loggia, erected on the site of New-place, to inclose a bust of the poet on a pedestal. The loggia, he observes, would admit of elaborate decorations in time to come in the way of statues, relievos, fresco paintings, and inscriptions.

Birkenhead.—The inhabitants of Birkenhead have held a crowded meeting in the town hall, Mr. W. Hind, chairman of the Birkenhead Commissioners, presiding, to consider what action should be taken in the approaching tercentenary celebration. A resolution was unanimously passed, "That it is desirable to celebrate in the borough of Birkenhead the tercentenary of the birth of Shakspeare;" and a committee, consisting of about sixty of the principal inhabitants of the neighbourhood, was appointed to carry out the necessary arrangements. A subscription list was opened in the room, and about 80*l.* at once subscribed.

Newcastle-upon-Tyne.—At a meeting of the Newcastle Shakspearian Tercentenary Committee, it has been agreed to hold the celebration on Monday, April 25th. The new Town-hall and the Music-hall were to be taken, and in the former a musical and dramatic entertainment is proposed to be held, and in the latter a *soirée*. A sub-committee has been appointed, with authority to arrange the necessary details. A deputation attended from the Printers' Society, explaining on behalf of the printers of Newcastle, that they had agreed to have a public dinner in celebration of the event, on Saturday evening, the 23rd April, and that they were prepared to take part in any out-door demonstrations that might be arranged for on the Monday.

America, and the Tercentenary.—The Earl of Carlisle (Lord Lieutenant of Ireland) has written to Hackett, the American actor, intimating that it would probably strengthen the kindly feeling which ought to exist between the two nations speaking the English language, if America would join with England in the celebration of the birthday of Shakspeare.



NUN APPLETON, YORKSHIRE.

THE SEAT OF SIR WILLIAM MILNER, BART.

"THE nunnery of Nun Appleton," says Dugdale, "was founded by Adeliz or Alice de St. Quintin in the latter part of the reign of King Stephen, and was commended to the patronage of the Virgin Mary and St. John the Evangelist." Of this first building of Nun Appleton nothing now remains except some early fragments, adorning at the present time the margin of the ornamental waters on the south side of the building. Of these fragments, some of the most interesting show the general character of the architecture of that early period, and that the building must have been exceedingly ornate for what we might now consider a small foundation; for Tanner says, "herein was a prioress and thirteen or fourteen nuns;" but in the 31st of Henry VIII. "eighteen beside the prioress were here." It is curious how the persevering antiquary might speculate upon the fragments of the past he would come across here, for not only do the remains of art of Stephen's time adorn the sloping banks of the lake, but these are intermixed with equally rich specimens of the art in later times,—the flowing tracery of the Edwardian period as well as the crisp picturesque forms of the Tudors, frequently miscalled debased; and, as if to show the mutability of things in general, fragments of all the various periods of architecture seem to have congregated at the water's edge, without a vestige of evidence as to how they came there, except in the records of the foundation of Alice de St. Quintin, briefly described by Dugdale and Tanner.

The nunnery shared the fate of most foundations of a similar kind at the Reformation, for among the abstracts of the rolls, called *Originaliana*, the homages of Guido and Thomas Fayrfax are recorded for the house and site, in the reign of Henry VIII.: there is another grant of the same in 7th Edward VI. to Sir William Fayrfax, Knt. and Humphrey Shelley.

It appears that Thomas Lord Fairfax pulled down the nunnery, and built, upon or near the site, "a stately fabric," says Thoresby, in his Diary, "which has been a noble palace." "The gallery, about 50 yards long, has thirty escutcheons in wood, and painted with the several matches of the family. There are a great number of chimney-pieces of delicate marble of

NUN APPLETON, YORKSHIRE.—Mr. E. B. Lamb, Architect.

various colours, and such a number of rooms, as I heard of none that had numbered them." This building was purchased by "Cousin Milner, in 1711," and was then in a ruinous condition, and the "cupola let in the rain." There is a sketch extant which shows the house to have been very similar to many others of that period, the present south front being the only part remaining. From the two extremities of this projected northward two wings, and probably a connecting corridor or wall completed a square, or nearly square, inclosure or open court. In the centre of the roof of the south front stood the dilapidated cupola. At the time of Lord Fairfax the house consisted of a ground and chamber floor, and the long gallery before mentioned, this being, no doubt, in the high-pitched roof. Thoresby records in his Diary, 1712, that he "was in company with old Robert Tate, who has seen the chapel and some remains of the nunnery; saw the old house pulled down, and a stately new fabric erected by Thomas Lord Fairfax, the General; and now the most of that pulled down, and a much more convenient one (though not quite so large) erected by Mr. Milner." The house must have been very large, as it is spoken of as "abundantly too large."

The alterations by Mr. Milner comprised the demolition of the wings: at the same time, the south side, which was previously a *single* house, was *doubled* by the addition af a large dining-room, library, and ante-room, more lofty than the original rooms on the ground-floor, and over these spacious bed-rooms and attics. These rooms still exist, and are shown in the plan, the dining-room, in the recent alterations, being now the saloon. In the most remorseless manner Mr. Milner denuded the old windows of their mullions and transoms; took off the high-pitched roof, and at once obliterated the long gallery, by raising the walls to a suitable height for a number of flat-ceilinged bed-rooms; and at the same time carried up the new addition on the north side, and covered the whole with flat roofs, and so converted the Gothic "noble palace" into a very indifferent—or as would be said at the present time, a very ugly—*Classic* building. The building was originally of red bricks, with mullions and other dressings of stone. Two three-quarter columns, in brickwork, upon stilted pedestals, were *added* to the centre of the south front, with the entablature *only* over them. Upon the extreme edge of the top member of this entablature was placed a thin balustrade; thus was the Gothic fabric metamorphosed into the fashionable style of architecture of the time. The north front carried out the same character, only the windows, being entirely new, were made much wider, and were adorned with Italian architraves. The whole of the fronts were *tatooed*, in order to form a key for the mastic covering intended to represent stone. This covering was in itself hard, and really very good, but it never adhered well to the stone or brick; bulged out in many places like a sail; and, having been jointed, it fell off in the square slabs represented by the jointed outline. Of course, when once this disaster commenced, it was followed up rapidly to a dangerous extent, so that it had to be entirely removed, a labour of the easiest kind.

In the alteration of the house, 1711-12, by Mr. Milner, it must not be forgotten that even at that time, when architecture was at a very low ebb, many comforts were introduced, among which must be named the common window-sash, which all architects of the present day find it difficult to apply consistently to the mullioned window. It is a difficulty which some endeavour to get over by doing as Mr. Milner did—cutting the mullion out altogether; but this can scarcely be viewed as a right solution of the problem.

As to when the domestic offices were altered at Nun Appleton—evidently at various times, and by different, or indifferent, hands,—there appears no clue; but they had become so dangerous, and were so inconvenient, that nothing short of rebuilding and remodelling could effect a cure of the several evils.

With the recent alterations made under the able direction of Mr. E. B. Lamb, many improvements and additions were introduced: the new wing became an important part of the building; and after the convenient arrangement of the place was determined upon, with the additions of new dining-room, morning-room, &c., an entire alteration of the approach was also made by the entrance on the north side, instead of, as hitherto, on the south side: this alteration left the south side for terraces and gardens without encroachment on their privacy by the general entrance to the house. A new porch has lately been added on the north.

A matter of some difficulty arose now in consequence of the prominence the new wing presented. How was the new work to unite with the old? What was to be the character of the architecture? For, although the building was to be plain and durable, still its size would necessarily impart a certain amount of *effect*; and to render that somewhat satisfactory much consideration was required. The materials to be used—bricks—were of a homely description, though the most excellent that could be, yet not of the same character and description as those used in the old building. Then as to style of architecture nothing remained of the Lord Fairfax's building but the damaged jambs of the windows—and the Italian character the most sanguine lover of precedent would hardly have dared to reproduce. Gothic casements and mullioned windows were thought to be inconvenient: it was therefore determined that with the splendid bricks made on the estate—square, and moulded in various forms—an attempt should be made to apply these materials in such a manner as would be consistent with their nature and convenience of construction, and such pictorial effects as with mere outline and light and shade could be produced. Gothic character—or rather the picturesque effect of the harmonious arrangement of numerous parts both in form and material—with also the harmony of construction, would in some degree produce that charm which renders Gothic architecture so generally popular; but how to benefit by that charm, and at the same time apply modern improvements, has been one of the difficulties in modern architecture. The mere reproduction of ancient art, without amalgamating the modern improvements which science and social comforts have presented to us, only places us in greater difficulty in the nineteenth century than the artists of bygone times ever had to contend with. We of to-day are forced to fit our improvements in social customs to the antiquated moulds, and thus produce those abortions characteristic of no period, though partaking of several, which are not uncommon. The wound the art received by the jump from rational to irrational architecture at the time of the Reformation has not yet been healed; and so long as we "design" without thinking, the art must remain in a torpid state.

In the new wing of Nun Appleton—to use the architect's own words—the endeavour has been to produce an agreeable and pictorial effect out of the materials available for the construction, and to act on a rational system.

It is in contemplation at some future time to alter the exterior of the old building, so as to improve, by some additions, and to recase the present work in the same character as that of the new wing. The porch, as before stated, has already been built.

MARYLEBONE ROAD.

THIS great Boulevard, which intersects and embraces more than half the metropolis, has of late years been subjected to many invasions; so that its pristine character is now totally changed. The railroad subtends its whole extent to King's-cross, and an enormous traffic occupies its surface throughout. It was, twenty years back, fringed with gardens and trees: now it is little distinguished from Mile-end or Commercial-road. Shops, stores, and work-yards line its borders for nearly all its length. The houses stand back from the pavement on an average of 40 feet throughout; but these spaces have been consecutively covered with shops, until there remain only three intervals of open space,—one extending from Park-crescent to near Lissongrove, a short one at Pentonville-hill, and a not unimportant one at its termination in Edgware-road.

Whilst the Metropolitan Railway was under construction, a great obtrusion upon the width of the thoroughfare and its general aspect was suffered to be perpetrated by the erection of an advanced wing to a public-house at the corner of Tottenham-court-road. The westward termination of the line is now threatened with an intrusion which would complete the spoliations so far accomplished. At the least wide portion, nearly opposite Lisson-grove, a line of about thirty-five houses stands back from the road about 50 feet, with fore-court gardens. This was formerly called Winchester-terrace, and runs in direction with the noble ranges of Oxford and Cambridge terraces,—the widest causeway in London. The effect of the view at this part is imposing, and the range, of about half a mile, is terminated on the west, near Victoria Gate, by the fine Church of St. James, and at the east near the Yorkshire Stingo, by a Roman Catholic chapel and school, of lofty, heavy, and plain appearance, the roof being of the barn fashion, and the end advancing before the line of frontage *ten feet*. In front of this there is, however, a fore-court, extending 60 feet to the pavement; in fact, the whole structure is of a singular character. It is about 70 feet deep, fronting Homer-row, by 40 feet in width; and consists of a residential basement, a school for 500 pupils on the first and second stories, and a chapel for public worship on the entrance-floor. The height is colossal, and the huge red fabric effectually blocks and terminates the view as seen from the terraces and the church at the nether end.

At this point it is that a further invasion is meditated upon the open space, by the erection of a school-house, to cover the whole front court 60 feet by 40 feet!

It is admitted that the owners of extensive ranges of house-property have the privilege of covering their fore-courts, where damage to neighbouring property may not be pleaded as a bar to such innovations. The value of this particular row as residential property consists in its open space and planted gardens; but in this case some occupiers and proprietors object to the proposal. The reverend fathers, who are of the Jesuit order, assure them that the proposed erection will screen them (these on the west) from the east wind! What can they say to those on the east?

These questions of spoliation are, however, as much of public as private importance. We find it impossible to get rid of the abominable blemishes in the old City,—Middle-row, Holborn, the straits (7 feet wide) of Chancery-lane, the block in the gullet of Tottenham-court-road, or the equally vile chronic constriction of Wych-street! Is there no remedy for evils such as these? or are railway boards the only authorities who can sweep away masses of habitations, and ordain the reconstruction of whole quarters, with or without reference to the tastes or convenience of the population? Yes, there is a Board of Works, and they have nearly effectuated *one new street of* 300 *feet long*, near Covent-garden! Possibly a commentary in the *Builder*, may draw attention to evils not yet infixed on the metropolis, and begin a new era, wherein there may be greater security against *the this e*, even although the old blemishes and disgraces of structural London remain unredressed.

M. M.

SANITARY MATTERS.

Liverpool.—At a recent meeting of the local health committee, the borough engineer presented the following report on the sewage question:—"That he has bestowed much consideration on this subject, but finds it impossible to deal properly with it in its present form. It constitutes an important part of the larger question of the utilisation of the refuse of the town. The engineer begs to suggest that in order that the whole question may be brought under the notice of the health committee and the council, the town-clerk, the medical officer, and himself should be authorised to investigate and ascertain the result of all the experiments which have been made in other places, and to report fully in such a form as to enable the council to set the question at rest in Liverpool, and permit the sanitary act to be carried out without let or hinderance." After some discussion, it was resolved "That the report be confirmed; and that the officers be instructed to obtain the necessary information, visiting the neighbouring towns to collect that information, and to report."

Tunbridge Wells.—A special meeting of the town commissioners has been held, to consider the question of procuring an improved supply of water to the town. There was a numerous attendance, and it was resolved unanimously that the committee to whom the matter had already been referred should be re-appointed, to ascertain from the two existing water companies whether they were willing to negotiate with the town for the lease or sale of their works, and upon what terms; also to learn what amount of compensation would be required for the plans proposed to improve the supply by Messrs. Nixon & Dennis; to collect further general information, and report upon the whole subject. The cost of carrying

ut the work was estimated by Messrs. Nixon & Dennis at 30,000*l.*

Swindon.—Fifteen inhabitants of the parish of Swindon met at the Town-hall, in compliance with a notice by one of the churchwardens, and a proposition, adopting the Local Government Act for the parish of Swindon, exclusive of the chapelry district of Swindon New Town, was carried by the votes of eleven of the ratepayers present.

BRISTOL SOCIETY OF ARCHITECTS.

FRESCO DECORATION.

The attention of the meeting of this society, held on the 3rd of March, was called to the result of the recent London architectural examination, and one of the pupils present, Mr. William Venn Gough, of Redland, received the congratulations of the society for having passed his examination with credit.

Mr. J. Beavington Atkinson delivered an interesting lecture on "Fresco, and other Modes of Mural Decoration;" but, having recently devoted considerable space to the statement of this gentleman's views on the subject, and the opinions that have been given by artists, it will be unnecessary now to return to them.

At the conclusion of the lecture a discussion ensued, when Mr. W. P. King expressed his opinion that the failure of the frescoes of the Houses of Parliament was owing to the formation of sulphate of soda by the Durdham Down lime that was used. Mr. Atkinson, however, did not consider this possible, as the lime had been proved in chemical analysis to be remarkably pure.

The Rev. Edward Young, Mr. Tucker, Mr. Gabriel, and several other gentlemen entered into the discussion; and Mr. C. Thomas explained the chemical nature of the water-glass, a bottle of which was on the table, that had been imported from Germany. He said that the firm of which he was a member were the largest producers of this water-glass in England, and that they had so perfected the process of its manufacture as greatly to reduce the alkaline portion of the compound.

NEW THEATRE AND OPERA HOUSE FOR BRADFORD.

This new building will soon, it appears, be erected, as plans have been prepared by Messrs. Andrews & Delaunay, architects, and contracts for carrying it out have been entered into by Messrs. J. Burnley, mason; W. Crabtree, joiner; J. Schofield, plumber; B. Dixon, plasterer; J. Thompson, slater; and Edward Harland, painter. The works will be commenced immediately; and it is expected that the building will be ready for opening early in November next. It is estimated that the cost, when completed, including the site, will be about 5,000*l.* The situation will be in Manningham-lane, nearly opposite the end of Drewton-street; and the site comprises an area of upwards of 1,600 square yards. The actual site for the building is 50 yards long by 20 yards wide. The total accommodation will be as follows:—Pit, 600; boxes, 274; upper boxes, 206; gallery, 812: total, 1,892. The width of the proscenium will be 30 feet, and the height 28 feet; and the depth from the front to the back of the stage will be such as to allow of the most effective scenic displays. The corridors, staircases, approaches, and space allotted for each person, will, it is said, be of ample dimensions. The gallery will be approached by a wide and commodious stone staircase, so that in case of fire it could be emptied in a short space of time. Internally, the decorations will be in white and gold, in the Italian style. Externally, the building will be constructed of stone, and the principal front will present a characteristic appearance, which a portico will render still more effective.

THE WORKMEN'S CLUB MOVEMENT.

We have said little hitherto as to the sort of entertainments occasionally given to the workmen in their new and rapidly extending halls. The following, condensed from the *Windsor Express*, may serve to give an idea not only of the nature of such entertainments but of the way in which the working class auditory appreciate them:—

"*The Brentford Workmen's Club.*—The interest taken by certain gentlemen of this neighbourhood in the welfare of the working classes continues unabated, and the men themselves prove their appreciation of what has been done for them by attending regularly at their clubroom, and mustering in large numbers, with their wives and families, when an entertainment is provided for them at the old British School-rooms. On Monday last Mr. Longhurst gave a second musical entertainment in these rooms. The programme commenced with Mozart's overture to 'Le Nozze di Figaro,' for the pianoforte, for four hands and violin, sparklingly rendered by Miss Longhurst (pupil of Mr. Sangster), Mr. Sangster, and Mr. Anderson. Then followed Wallace's charming ballad, 'A Father's Love,' sung with much taste by Mr. Hayes. The duet for four hands from 'The Puritan's Daughter,' by a young lady and Miss Longhurst, was loudly redemanded. A member of the Ealing Choral Union delighted the audience by singing 'Let me like a soldier fall;' they were clamorous for a repetition. Mr. Sangster's clever rendering of Oesten's selection from 'Guillaume Tell' also pleased the audience amazingly; but the gem of the evening appeared to be the overture to 'Fra Diavolo,' brilliantly executed by Miss Longhurst, Mr. Sangster, and Mr. Anderson—pianoforte four hands and violin. A young lady also performed Wolfe's 'Life let us cherish' in so charming a manner as to cause it to be redemanded most enthusiastically. Mr. Anderson performed De Beriott's fantasia from 'Masaniello' for violin, accompanied on the pianoforte by Mr. Sangster, this charming little piece was redemanded. Mr. Hayes created some little amusement by singing a comic song, and was followed by Mr. Sangster, who favoured the audience with the ghost-like adventures of 'Alonzo the brave, and the fair Imogene;' and the concert concluded with the National Anthem."

Portsmouth.—A large meeting, convened by the mayor, has been held here to consider the advisability of erecting a workmen's hall. The mayor presided, attired in his robes and chain of office, and supported by various aldermen and town councillors, and other influential personages. Resolutions were unanimously carried approving of the proposal to erect a hall, and a committee was appointed.

York.—The Workmen's Club here has been opened under such auspices as to give confidence in its success. "Henceforth," remarks the *York Herald*, "the working men of the city will possess a place where they can read, or chat, or smoke, or amuse themselves with different games; in short, an institution which will have all the attractions of the public-house without its dangers and its cost. We hope, then, to witness the club gradually growing in public estimation, so that it may take a permanent place amongst the institutions of our city."

Bolton.—The first Working Men's Club here has been opened. It is on a comprehensive yet economical scale, and in commodious premises, known as Bank House, situate at the junction of Kay-street and Fold's-road, Little Bolton. The mansion and grounds have been purchased for 2,000*l.* The alterations and furnishing will cost some hundreds more. About 700*l.* in donations have been subscribed by gentry and tradesmen, and many working men have taken shares.

Bewdley.—At a special meeting of the council for this borough, held at the Guildhall, it has been finally arranged that application should be made by memorial to the Treasury, for permission to apply a sum of money, not exceeding 1,500*l.*, to be realised by the sale of a sufficient portion of the sum of 4,000*l.* stock in the Three per Cent. Consolidated Bank Annuities belonging to the council, in the purchase of a site and erection thereon of public buildings for the use of the inhabitants for a Working Men's Institute, library, concert-room, &c. The Bewdley councillors must be liberal men.

Tisbury.—A new Library and Working Men's Hall has been opened in this place, under the patronage of the Marquis of Westminster. The proceedings included a public tea, at which 300 were present, after which there were glees and speeches.

CITY CROSSINGS.—LONDON BRIDGE.

Whoever has had occasion to cross King William-street, City, south of the statue, or to cross the roadway on London Bridge, can testify to the delay, danger, and difficulty of the attempt. It was only a few days ago that an unfortunate man was killed in endeavouring to pass between the continuous stream of vehicles of all descriptions which encumber the road. This danger might readily be obviated by the construction of a tunnel under the roadway at either end of the bridge, where it would not interfere with any drains, gas or water pipes.

The example of security to pedestrians given by the railway tunnels at South Norwood, Clapham junction, and elsewhere, are ready proofs. At either end of London Bridge there is ample space to construct the descent into such a tunnel without encroaching upon the direct footway, or intruding upon the habitations on either side.

IDLER IN LONDON.

*** Drawings for such a tunnel at the end of London Bridge were prepared a year or two ago.

M. PIEROTTI'S "JERUSALEM EXPLORED."

This book, for which so much was promised, contains what would seem to be so many plagiarisms, weaknesses, and inaccuracies, that faith in it will be altogether destroyed unless these can be explained away. Some of the views, though claiming to be new, are barefaced copies of known prints and photographs, by Roberton, Tipping, Fergusson, and others. Mr. George Grove pointed out some of these in detail, in a communication which reached us last week too late for publication. We may find an opportunity to return to the subject.

THE ARCHITECTURAL ASSOCIATION.

The ordinary meeting of members was held on Friday, the 4th inst., at the House in Conduit-street.

The chair was occupied by the president, Mr. T. Roger Smith.

Mr. Henry Christian was, on ballot, elected vice-president of the Association in the room of Mr. R. P. Spiers, resigned. Mr. Webber was also elected a member of the committee.*

The Chairman, in announcing a meeting for the organization of the voluntary examination class, expressed his hope that as many of the members of the Association as could spare the necessary time would attend and avail themselves of its advantages.

Mr. Gilbert Scott, R.A., then read a paper entitled "Thoughts and Suggestions on the Artistic Education of Architects." This we have given *in extenso*.

At the conclusion,—

The Chairman observed that the paper was a most interesting and valuable one, and contained many practical suggestions which it was to be hoped would be carried out. He was especially impressed with what Mr. Scott had said as to the aim and object of architectural study. The aim of study was to produce buildings, and the requisites for good buildings were good working drawings and thoughtful designs, without which the works when finished could not be good architecture. He recommended the members of the Association to study the human figure and the works of nature, so as to obtain a knowledge of the most beautiful and graceful forms. Such a school of architecture as that which Mr. Scott had suggested would probably do much towards supplying the three great wants of the architectural student—namely, a just eye, a skilful hand, and a correct taste. Such an institution would also do much towards individual improvement in the study of collateral subjects,—such, for instance, as figure-drawing, which was calculated to improve essentially the general capacity to draw. There were in the room at that moment about 100 young men who might become available as the nucleus of a central school of architecture. If the matter could be put into a practical shape, he was persuaded that many present would enrol themselves as students or officers of the proposed association: and for himself he could say that he would be one of the first to come and work at it, whenever time permitted.

Professor Kerr in moving a vote of thanks to Mr. Scott for his paper, observed that the reason they had to deplore a deficiency of artistic skill in proportion to artistic lore was, that young men not being forced to educate themselves were too often of opinion that education in its strict and stern sense was not necessary. It would not perhaps do to say that there was no such thing as genius; but nevertheless, he feared it was a fact. The intellect might be likened to a mill, and whatever came out of it depended very much upon what was put into it. If you put wind in, wind only could come out; but if solid instruction were put in, adequate results would follow. Mr. Scott had already told them what ought to be put into the mill as regarded architecture. The first thing to put in was construction. The student must next get into his mind all he could gather of the architecture of the past; and, having imbibed that, he should turn his attention to modern works, such as were to be found in France and Germany, but especially in the latter. There was, he regretted to say, too much disposition among the flippant critics of the day to pooh-pooh current works, and regard them as unworthy of consideration because they were modern. This was a great mistake, as many of them were beautifully conceived, and were the result of infinite labour and much taste. Having expressed his regret at the absence of æsthetic criticism in the art literature of the day, Mr Kerr proceeded to state that he quite agreed with Mr Scott as to the advantages to be derived from free-hand drawing. They might depend upon it, that architectural drawing would come of itself, but free-hand drawing would not come of itself, though where acquired by study it would be found a most valuable auxiliary to architectural drawing. Free-hand drawing would make the student a thorough draughtsman as opposed to a mere mechanical draughtsman. A knowledge of sculpture and modelling would soon follow. With regard to the proposition of Mr. Scott for the formation of a central school of architecture, he was sure the suggestion would be well received by the Royal Institute of Architects, but he thought such an association ought not to be founded as an independent body. He would be glad to see the two architectural associations more closely connected, because he regarded the one as the parent or senior, and the other as the child or junior, and it occurred to him

* The following gentlemen were elected members of the Association:—Mr. G. H. Pollard, 4, Great St. James-street, Bedford-row; Mr. Robt. Morris, 26, Portman-square; Mr. Alfred Taylor, 13, Furnival's-inn; Mr. W. Faith, jun., 3, Streatham-hill; Mr. A. P. Goodman, 9, Linden-villas, Camden Town; Mr. C. A. Davis, 12, Lowndes-square; Mr. W. W. Bosworth, Prince of Wales-road, Kentish-town; and Mr. G. J. Parry, 5, Kilburn-terrace, Peckham.

that it might be possible for the Institute, by means of classes, or by an extension in some way or other of the principle as adopted in the voluntary examinations lately introduced, to aid in carrying out the suggestion of Mr. Scott. With regard to the long, elaborate, and carefully-digested paper read that evening, all he could say was, that it was an eloquent illustration of how possible it was for a man who had already a great deal to do, to do a little more.

A member inquired of Mr. Scott whether he proposed to carry out in the new public offices at Westminster the three points which he had so justly commented upon in his paper, as essential to the adequate ornamentation of architectural works,—namely, delineations of the human figure, animal life, and the vegetable world.

Mr. Scott replied, that he hoped to be able to do so to some extent, and that the introduction of sculpture formed a portion of his plan; but that of course a good deal would depend upon the parliamentary grants made for the works. With regard to the observations of Professor Kerr, in reference to the Institute, he was sure it would do all in its power to encourage a central school of architecture: at the same time, he differed with Mr. Kerr as to the position which such a school should occupy. In his opinion, it ought to be independent of the Institute and of the Association: and his idea was, that the best art instruction should be given, and that the students should pay for it.

After some discussion, in the course of which it was stated, by Mr. C. J. Adams and others, that the South Kensington Museum of Architecture, however good, was, by reason of its distance, altogether inaccessible to the great body of students who might be expected to join the central school,

Mr. Blashill moved a resolution to the effect, that the suggestion of Mr. Scott for the establishment of a central school of architecture was cordially approved by the meeting, which pledged itself to do all in its power to give it effect.

The resolution was carried unanimously, Mr Scott suggesting that the central school, if founded, might meet for the present in the house in which they were then assembled, and that possibly an arrangement might be made with the authorities at South Kensington for loans, from time to time, of some of the objects exhibited in their museum.

The chairman announced that the next subject for the class of design would be "Semi-detached Villas," and that on the 18th instant Mr. G. J. Wigley would read a paper on Romanesque architecture.

FROM IRELAND.

Royal Bank, Dublin.—The new branch offices of this bank, situate at Arran Quay, are now open, and will afford increased facilities for the extension of banking business in this locality. The façade is of Italian Gothic character, divided into three equal bays of massive piers, surmounted by short shafted columns with carved caps and bases, the frieze being crowned by a richly floriated string-course terminating in raised bosses. The quoins are raised and channelled, and the parapet finished with projecting cornice on moulded corbels; the ground-plan, consisting of back and front offices, fire-proof chamber, porter's-room, lavatory, &c., providing ample accommodation for the officials and the public; the upper stories being reserved for a residence for the manager. The works were executed by Messrs. Daniel Crow & Son, under the directions of Mr. Charles Geoghegan, architect to the bank.

Mining Company of Ireland.—A new residence for the local managers at the smelting and shot works of Ballycorus, county Dublin, has just been completed, the ground-floor containing three reception-rooms, with kitchen, pantries, stable, and out-offices, the chamber-floor having six apartments. The walls are of granite, with projecting cantilever roof, and the dressings are of Belfast red bricks. Messrs. Crow & Son were the builders, and the architect was Mr. Charles Geoghegan.

The Sanitary State of Dublin.—A paper by Dr. Mapother has been read to the Statistical Society on this subject, and of which the *Medical Press* says:—"Had we been told by any less careful and impartial observer than that gentleman, that we lived in the centre of such miasmatic horrors as he discloses, we should have discredited the statement. We have always and we fancy the opinion was shared by most of our town readers—imagined that Dublin enjoyed hygienic advantages superior to most other cities; and though we were aware that great squalor and dire distress existed here and there, we never anticipated such disclosures as Dr. Mapother's paper sets forth. Such is the state of the poor among whom we live; and we dare not look calmly on, regarding such a state of things as a necessary evil. By proper legal machinery judiciously administered, all this might be greatly mitigated. Mortality as great and miseries as hopeless have been combated elsewhere with the reward of thousands of lives. Be it remembered that we are not called upon to legislate so much for the *status in quo* to-day as for the time which has come already more than once, and which will come again,—the time of the typhus, cholera, or small-pox epidemic. Dublin has suffered oftener and more severely from such visitations than other cities, and experience has too well proved that temporary sanitary measures adopted when the plague was at its height were utterly insufficient to stay its progress." Dr. Mapother suggests that "in proportion to the size and population of Dublin, seven officers of health would be sufficient, as a greater multiplication of authorities and reports would be disadvantageous. The combination of the offices of medical attendant of the poor, registrar of deaths, and officer of health, would enable him to direct his attention to any locality where disease, especially of a preventible nature, arose, or where deaths, above the average from any particular cause, occurred, and would lead to a well-directed sanitary improvement." The *Medical Press* on this remarks that "it is evident that no officer of health could be as efficient as the medical man, who is obliged by the stern mandate of the red ticket to constitute himself an unwilling inspector of nuisances for the time: the duties of registrar, dispensary officer, and officer of health would add to the efficiency of others; and time and labour would be economized with advantage to the public service."

Dublin and Antrim Railway.—The works of this line have been commenced near Lissue, the Very Rev. the Dean of Ross and Mr. John Bower cutting the first sods. The contractors for the works are Messrs. Greene & King.

Ballyclander (Downpatrick).—The Orange Hall recently erected in Ballyclander, on a site given by Mr. William Johnston, at Ballykilbeg House, has been inaugurated by a *soirée*. The hall is about 45 feet long by 30 feet broad, and proportionately lofty. Besides the special purpose to which it is dedicated, it will be used as a place for holding a Sabbath school, prayer meetings, and other assemblies of a religious character.

Ballymoney.—Few towns in the North of Ireland have undergone such marked improvements within the last ten years as Ballymoney. Amongst these improvements is the new bank in High-street. The Belfast Banking Company purchased, about twelve months ago, the Ball Room, or the Assembly Room, as it was lately called, for the erection of a new bank building, which is finished. The exterior of front and gables is in coursed ashlar and Portland cement. The roof is partly hid from view by a parapet, surmounted by balustrading. The upper and basement stories are divided by a heavy moulding, which corresponds to the moulding of the entablature, while a smaller moulding runs round the upper windows. The architect was Mr. James M'Nea, of Belfast; and Mr. Samuel Crawford was the contractor. The works were executed under the superintendence of Mr. James Alcorn.

THE BUILDING ACT AND THE VESTRIES.

AT a recent meeting of the Islington vestry, Mr. Bolton moved,—

"That this vestry is of opinion that, for the protection of the public, and in order that proper and efficient control may be exercised over buildings in course of erection, it is necessary that the supervision of such buildings should be transferred from the Metropolitan Board and the District Surveyors to the chief vestries and local Boards of the metropolis. That a special committee of sixteen members be appointed to give practical effect to the preceding resolution, by communicating with the other local authorities of the metropolis, with the view of bringing the proposed alteration to the attention of the Legislature, and, if necessary, obtaining further powers of supervision."

Mr. Edmeston, Mr. Reddish, and Mr. Timewell spoke against the motion; and it was ultimately negatived by 38 against 5.

RAILWAY MATTERS.

THE traffic receipts of the railways in the United Kingdom for the week ending the 4th of March, 1864, upon a mileage of 11,222¼, amount to 533,373*l.*, being equal to 47*l.* 16*s.* per mile. For the corresponding week of last year the receipts were 504,866*l.*; the number of miles open, 10,738¼, or 47*l.* per mile. A comparison of the two weeks shows an increase in the aggregate receipts of 28,507*l.*, and of miles open 484¼, being at the rate of 58*l.* 18*s.* per mile. On the lines having termini in the metropolis, according to the *Railway News*, the increase has been on the Great Eastern, 480*l.*; Great Northern, 2,784*l.*; Great Western, 2,217*l.*; London, Chatham, and Dover, 696*l.*; London and North-Western, 6,990*l.*; Metropolitan Extension (London, Chatham, and Dover), 490*l.*; Midland, ½,114*l.*; North London, 89*l.* On the metropolitan lines there is a decrease upon London and Blackwall, 87*l.*; London and Brighton, 1,715*l.*; London and South-Western, 942*l.* South-Eastern, 1,354*l.*; the Metropolitan, 227*l.* On fifty lines of railway, with 9,902¾ miles open, the aggregate receipts for goods and minerals were 305,709*l.*, and for the corresponding week of 1863, on the same number of lines, with 9,629 miles open, 273,160*l.*, showing an increase of 32,549*l.* The receipts from passenger traffic on the same lines were 180,794*l.*, and for the corresponding week of last year, 187,108*l.*, showing a decrease of 6,314*l.*——The North-Western has a capital of nearly forty millions: it has upwards of 1,200 miles of line open; and it takes 90,000*l.* a week over the counter.——The alarm caused by a recent accident on the Gothland incline, has induced the directors of the North-Eastern to order a new and more powerful rope of copper wire, to replace the one which broke. The new rope is stated to be 1¼ inch diameter. Passengers continue to walk up and down the incline, a distance of nearly a mile.——The New Zealand papers record the opening of the first railway in that colony, between Christ Church and Heathcote, in the settlement of Canterbury.——A Paris letter in the *Indépendance* of Brussels says;—"It is asserted that MM. de Rothschild & Co., have arranged with the Italian Government for the purchase of its railways. The contract of sale has been signed by M. Minghetti on the one hand, and by MM. de Rothschild & Talabot on the other. The purchasers will take possession of the whole network of the Italian railways with the fixed and rolling plant on the 1st October next: they also engage to make a considerable advance of funds to the Government immediately, and have further promised to respect the rights of the railway officials to a certain extent."

BOROUGH SURVEYORSHIP OF DERBY.

THERE were forty candidates for this appointment. On examination of their respective claims by the committee, the three following gentlemen were recommended to the town council as equally eligible, viz.;—Mr. Alfred Fowler, of Leeds; Mr. James Lemon, of London; and Mr. George Thompson, of Derby. Ultimately Mr. Thompson was elected to fill the office.

The following resolution was passed unanimously:—

"The Local Board of Health and Corporation of the Borough of Derby have pleasure in stating, on behalf of Mr. Fowler, of Leeds, and Mr. Lemon, of London, who were candidates for the office of borough surveyor, that although the choice of the Board has fallen upon Mr. Thompson, of Derby, all three gentlemen were considered to be fully competent to fulfil the duties of the office of borough surveyor, they having been selected by the joint committees, out of a list of forty applicants, as fully qualified for such office."

A vote of thanks to the retiring engineer, Mr. T. C. Thorburn, was also passed unanimously.

There is a nice feeling in all this.

GAS.

LORD DERBY has presented a petition in the House of Lords, from Vauxhall, against a bill promoted by the Phœnix Gas Company. As the object of the bill was to extend an existing company he said he could not hold out any hope to the petitioners of having it rejected on the second reading; but when it was read a second time he would move that it be referred to a select committee.

AT Richmond, the supply of gas is in the hands of a lessee, who has given much dissatisfaction, both as to price and quality, and the directors of the company have resolved to refuse a renewal of the lease, which expires in December next, after which, they propose to reduce the price as well as, no doubt, improve the quality of the gas supplied. The directors report the continued prosperity of the company, and propose to increase their works. They have just recommended a dividend of 8 per cent. which has been adopted at the company's annual meeting.

The Croydon Gas Company have declared a dividend for the half-year, at the rate of 7½ per cent. (per annum, we presume) with a bonus on the old shares.

The Cuckfield Gas Company have just held their annual meeting. The directors report an improving state of affairs. They some time since reduced the price of gas to 8*s.* 4*d.* per 1,000 feet, and were pleased, and no doubt surprised, to find that the number of consumers increased, and the prospects of the com-

any improved under the circumstances. The ompany have declared a dividend of 5 per cent. er annum.

The Tenterden Gas Company have declared a ividend of 5 per cent. per annum, and a reserve f 276*l.* for additions and improvements to the orks.

The Longton Gas Company's directors have resented a congratulatory report to their share-olders, recommending the payment of a dividend f 7 per cent. In addition a considerable sum as been placed to the credit of the guarantee nd.

Some of the inhabitants of Lyndhurst are nxious to have gas, and several hundred shares ave been promised to be subscribed for. It is nought that with a capital of about 3,000*l.* or ,000*l.*, in 2*l.* shares (limited liability), the works ould pay from 5 to 7 per cent.

The Wolverhampton Gas Company have an-ounced another reduction in the price of gas—amely, from 3s. 4d. per thousand cubic feet, the resent maximum price, to 3s. per thousand hirteen candles). The chairman states that his is the sixth reduction made in seven years, nd that the total diminution made in the price, nce the commencement of 1857, is 2s. per housand cubic feet, or 40 per cent. upon he amount then charged—namely, 5s. per housand. We doubt not, remarks the local *Chronicle*, that the directors, in anticipating a rge accession of customers as the result of the owering of the rate, will in due time find their xpectations fully realised.

The Malmesbury Gas Company have reduced he price of their gas 10d. a thousand. There has een for some time a contention between the com-any and the consumers on this point, the latter ating that the reduction would be followed by ncreased consumption; but the company have itherto refused, mainly on the ground that the ividends have not yet averaged 5 per cent. hould the present reduction be met by a pro-ortionate increase of consumption, they will on nat event make a still further reduction. The resent price is 6s. 8d. per thousand, and the ontract price of coal 17s. 6d. per ton.

The inhabitants of the outlying villages round Warwick are exerting themselves to obtain gas. everal meetings have been held, at which peeches highly favourable to the movement ave been made.

The Dudley Gas Company have resolved to ake a further reduction in the price of their as.

The Chard Gas and Coke Company have een compelled by threat of a new company to educe the price of gas from 7s. 6d. to 6s. 6d., nd improve it, both in quality and quantity.

The West Bromwich Commissioners have etitioned Parliament, praying that, in the Act ought for by the Birmingham and Staffordshire as Companies, the price of gas to persons con-uming less than 25,000 feet per quarter be estricted to 2s. 11d.; to those consuming over nat and less than 100,000 feet, 2s. 7d.; and to hose consuming more than 100,000 feet, 2s. 3d.; lso that incoming tenants be not liable to pay rrears for gas due by previous occupants, or ave their supply stopped on refusal.

At a meeting of the Stockport Town Council, eld on Monday last, the accounts for the year 863, presented by the gas committee, were dopted. It appeared that, after paying 5 per ent. to the council on the capital invested in he works (notwithstanding the large and exces-ive amount of rates and taxes paid, as com-ared with former years) there was a balance eft of 3,666*l.* 18s. 3d. This balance, with the nterest paid, would be equal to a dividend of bout 11·25 per cent. on the invested capital. The quantity of gas produced in the year was 4,086,000 cubic feet, being an increase of ¼ millions of feet over the year 1862, though onsiderably under the ordinary quantity of gas roduced at the works when all the cotton-mills re working full time. The "leakage," compared ith the two or three preceding years, had been educed to an extent of 7 per cent., which fact, f itself, accounted for a considerable portion of he large balance left in the hands of the gas ommittee. The wise policy of a reduction in he price of the gas (of about 24-candles illu-inating power) from 5s. outside, and 4s. 6d. nside, the borough, to one uniform rate of 4s. er 1,000 feet to ordinary, and 3s. 6d. per 1,000 et to the largest consumers, took effect on the st January last.

The annual report of the Cockermouth Gas-ight Company's directors states that, in accord-nce with a resolution passed at the last annual meeting, the price of gas had been reduced to consumers from 5s. to 4s. 6d. per 1,000 feet. The sum of 105*l.* had been expended during the year in laying new mains, &c.; but, after paying all expenses, a balance sufficiently large remained to enable the committee to declare a dividend at the rate of 8 per cent. per annum. The report was unanimously adopted by the meeting.

The South Shields Gas Company have declared a dividend for the past half-year at the rate of 9 per cent. per annum on paid-up capital. They have also authorized an extension of their works on account of increased consumption of gas.

At Cardigan St. David's day was a greater day than usual, from the opening of the newly-erected gasworks to supply the town for the first time with gas. Mr. T. Andrews, of Swansea, is the engineer; and Mr. J. Vicary, of Exeter, was the contractor.

NEWS FROM SYDNEY.

The erection of the new Post Office is still in abeyance, it being understood that the Government are negotiating for the purchase of the land through to Pitt-street, and intend to carry a row of shops along the frontage of both streets, and to place the Post Office in the centre of the block. The only large Government building now in hand is the new wing of the Australian Museum: the greater portion of the framework for the roof is up, and several of the capitals are fixed. The additions to the Government Printing Office are nearly finished.

The finest structure in progress in the city, according to the local *Herald*, is the new building for the Australian Mutual Provident Society. The ornamental elevation in New Pitt-street is now finished, with the exception of the group of statuary which is to be placed over the centre of the balustrade. The subject of this piece of sculpture, which has been executed in Melbourne by Mr. C. Summers, is "Australia receiving the gifts of Peace and Unity," life-size and draped in the Greek type. The right hand holds a cornucopia, and the left bears a bunch of palm. The supporting figures—a youth and woman with a child—symbolise the vigorous adolescence of Australia. The group was formed in plaster: it is now being cast in iron.

The foundation stone has been laid of an addition of thirty feet to St. Barnabas Church, which will provide sittings for 300 persons. The new elevation, which will face Parramatta-street, will be in the Gothic style. The foundation-stone has also been laid of a Gothic parsonage contiguous to St. Paul's Church, Redfern. The work has been contracted for by Mr. Lavers.

The Wesleyan school-house in Bourke-street, Surrey Hills, is now completed.

In George-street a block of new buildings for an extensive ironmongery business has been opened. The elevation is in the Italian style. The ground-floor of the shop is 60 feet wide, 14 feet high, and extends back 102 feet. The store exclusive of the ground-floor under the lantern light, contains 173,000 cubic feet, which is equal to 4,300 tons measurement. One of the noticeable features in this store is a travelling hoist, by which packages can be taken from any part of the floors, and at once lowered into the drays. This contrivance is the manufacture of Messrs. P. N. Russell & Co., is worked from the ground-floor by means of endless ropes, and is travelled north, south, east, or west as required.

The York-street elevation is of brick pointed with stone. The upper story of the George-street elevation is carried on a wrought-iron tubular girder 61 feet in length, and weighing 6 tons 1 cwt. 21 lb., the largest girders yet made in the colonies. The floors in the interior of the George-street warehouse are all supported by single web wrought iron girders, altogether weighing upwards of twenty-three tons. The girders were the manufacture of Mr. Penny, of the Glebe.

The masonry has been performed by Mr. Sutherland, the brickwork by Mr. Edgley, the plumbing by Mr. Moorehouse, and the painting and decoration by Messrs. Watson & Fraser. The whole of the work was undertaken and carried out—under the direction of Mr. E. T. Blacket, architect—by Mr. Alexander, builder and contractor.

Various other business premises have been erected of late in different parts of the town.

In an interesting article on the mortality of males and females in the colony, the *Sydney Morning Herald* says:—"To a thousand females who die, there die 1570 males in the whole colony, 1871 in the provinces, 1231 in the city, 1152 in the suburbs. To every thousand males living in the colony the proportional number of males who die in a year is 18·41; while to every thousand females living the proportional number of females who die is only 15·76. Therefore, assuming the population of the colony to consist of males and females in *equal numbers* (100,000 males and 100,000 females), the mortality of males is so decidedly higher than that of the other sex that to every thousand deaths of females the number of males' deaths is 1168 in the colony, 1226 in the provinces, 1290 in the city, and 1152 in the suburbs. Why the proportional number of deaths should be so much in excess on the side of the males, and why the excess should be higher in the city than in the suburbs and the provinces, are problems we do not pretend to solve. Again, as to the difference between the mortality of the sexes in the colony and in England, the comparative results are the following:

	England.		N. S. Wales.
Deaths of males to 100,000 males living	2321	...	1841
Deaths of females to 100,000 females living	2173	...	1576
Mortality of females below that of males	148	...	265

The superior vitality of the female over the male sex is here represented by 148 in England against 265 in New South Wales."

CHURCH-BUILDING NEWS.

Truro.—The church of St. Ladock, near Truro, Cornwall, has been reopened, after restoration by Mr. Street, architect. The whole cost, 2,000*l.*, has been borne by the rector, the Rev. R. F. Wise. The new work is Early Decorated. The east window is a three-light, with stained glass. The subject in the second light is Mary the sister of Lazarus wiping the feet of our Saviour with her hair, as he sits at the table of Simon the leper. The window was by Messrs. Morris & Falkner, and intended as an imitation of ancient glass. The roof-screen is of oak, carved. The church is fitted with open sittings, all of which are covered with scarlet pile carpet.

Llandwrog. The parish church of Llandwrog, which is about seven miles on the Lleyn side of Carnarvon, has been rebuilt at the cost of Lord Newborough. The new church, which is in the Decorated period of Gothic architecture, consists of a nave, 63 feet 9 inches by 17 feet 6 inches; chancel, 27 feet by 19 feet; north and south transepts, 20 feet by 19 feet 6 inches; the Glynllyfon chapel (which is designed in a later style than the church) on the south side of the chancel; a robing-room on the north, or opposite side; and a tower or spire, about 110 feet high. The lower chamber of the tower serves as a south porch. The churchyard is approached from the south side through a lytch gate, in the same style as the church, and made in the neighbourhood. The material used in the construction of the walls is Anglesey limestone, white being used for the dressings, or ornamental parts, and black for the rubble work, or general outside faces of the walls. The walls, internally, are lined with Bath stone. The spire is of white limestone. The roofs (covered with Carnarvonshire slates) are of pitch pine, stained and varnished, springing from carved stone corbels. The whole is lighted by traceried windows, of various designs. There is a stone screen, supporting the minstrel gallery, at the west end; a carved screen of oak within the arch, at the intersection of the chancel and Glynllyfon chapel; and a light wrought-iron screen in the chancel arch. The seats are arranged in the manner of stalls in college chapels, and are of carved oak. The east window, which is a memorial to the late Lady Newborough, and several of the other windows, are filled with stained glass. A warming apparatus, furnished by Mr. W. Bennett, of Liverpool, is placed in the vaulting below the church. The designs for the church and lytch gate were furnished by Messrs. Kennedy & Rogers, of Bangor and London, architects; but the external fittings have been carried out under Lord Newborough's own superintendence, and the whole of the works have been completed at his lordship's expense, which is stated at from 6,000*l.* to 7,000*l.* That portion of the work carried out under the architect's direction was contracted for and executed by Mr. W. T. Rogers, builder, Beaumaris.

Rhodes.—A Lancashire paper records the consecration of All Saints' Church, Rhodes. About ten years ago, it states, a small edifice, to serve

as a church and a school-room, was reared at Rhodes, to meet the wants of the Church-people of that village. Since then the congregation has so far increased as to warrant the attempt at enlargement, and to make it a church with a district, apart from and independent of the one to which it has hitherto been attached. The enlargement consists of a chancel added to the east end, and a further addition to the west end. The church now consists of a chancel, nave, and south porch, with open timbered roof. The pew system is abandoned, the sitting accommodation being open benches, which are all free and unappropriated, and capable of seating about 400 persons. In the chancel is a large circular window, with five divisions, all of stained glass, the principal representations being "The Nativity," "The Crucifixion," and "The Resurrection." The body of the church is lighted with six windows (all new) of cathedral glass, and bordered with amber. Gas is also introduced. The church is flagged in the usual way, with the exception of the chancel, which is laid with red, white, and blue tiles.

Preston.—A subscription has been commenced for raising funds for building a new church in Parr, in lieu of the church lately burned down there. A new site has been selected, and it is intended to erect a church capable of holding 800 persons, at a cost of about 3,000*l.*

PROVINCIAL NEWS.

Ynysmeth. An order has been received from the Home Secretary for the erection of a new gaol here. It is said, however, that in order to avoid the great expense incident upon the erection of a new gaol, representations will be made to Sir George Grey as to the advisability of transferring all prisoners, male and female, sentenced to terms of imprisonment exceeding three months, to the county gaols of Wymondham and Norwich. It is estimated that a new gaol will cost somewhere about 7,000*l.* A portion of the 11,000*l.* to be received by the Corporation from the Admiralty, for the purchase of the land in the locality of the Royal Naval Hospital, Southdenes, will probably be devoted, should the consent of the Treasury be obtained, to the erection of the new buildings, in the event of the Home Secretary insisting upon the construction.

Biddestone (*Somerset*). The contract for building a clock tower in the Market-place has been taken by Mr. A. Pettit, builder, of this place, for 120*l.*

Wandsor. The new alms-houses building under the will of the late Mr. Chariot, and connected with William-street Chapel, are approaching completion.

Basingstoke. It has been resolved to erect a new corn exhange here. The committee appointed to carry it out have had a conference with the members of the corporation, and resolutions favourable to the object in view were passed at the meeting, a new committee appointed, and a subscription list opened, with 1,200*l.* in shares. The sum required is about 3,000*l.*

Sherborne.—The Yeatman hospital plans were recently laid before the local Board of Health for approval. The hospital is to be erected near Back-lane. The materials are to be Ham-hill stone, and Sherborne stone, lined with brick. The internal walls are also to be of brick, and the roofs to be covered with stone tiling. The bye-laws of the Board of Health provide that every habitable room should have an average height of 8 feet. This was found to be not the case with the centre room immediately under the roof. The attention of the architect was called to this bye-law, and he replied that the room was not intended to be habitable. As, however, he had provided for a floor and ceiling, and it appeared to be just the place to be used on an emergency, the Board felt compelled to return the plan unapproved.

Cardiff.—The Cardiff Hotel Company is about to be formed for the purpose of building and establishing a first-class family and commercial hotel in Cardiff. The capital will be 15,000*l.*, in 600 shares of 25*l.* each.——A portion of the premises belonging to Messrs. Price & Sons, at the corner of Caroline-street, Cardiff, is about to be taken down, for the purpose of making way for a larger and more commodious building. The new building is designed by Messrs. Hartland & Son. The contract has been taken by Mr. L. B. Moore.

Bideford (*Devon*).—The foundation stone of the Northam Burrows Hotel has been laid. The hotel will be built by a company formed for the purpose of erecting a family hotel in the immediate neighbourhood of the Pebble Ridge, Northam, and for the management of an estate on which it is intended to build villas and lodging-houses. A contract for the erection of the hotel has been entered into with Mr. Estcourt, of Gloucester, for 4,365*l.* In addition to this, it has been determined to lay out 300*l.* in the construction of roads and walks. The design of the building has been planned by Messrs. Medland, Maberly, & Medland, of Gloucester and London. It will be built in the Domestic Gothic style of architecture, and will contain 33 bed-rooms. The coffee-room will be 34 feet by 18 feet, and the entire area 105 feet by 45 feet. The spot selected for the erection of the hotel is about 2¼ miles from Bideford, and close to the village of Northam, or "Northam Town." In honour to Charles Kingsley, whose work has done so much to excite public attention to the beauties of the scenery of the north of Devon, the hotel has been christened "The Westward-Ho Hotel." The foundation stone was laid by the Countess of Portsmouth, in presence of a large concourse of people.

THE STAGE.

Royal Italian Opera. — Mr. Fred. Gye has issued a famous programme for the coming season, commencing on the 29th inst. To Mdlle. Patti, Madlle. Battu, and others known, have been added, Madlle. Pauline Lucca, Madlle. Emilia Lagrua, and other ladies fresh to England; while, on the male side, Mario, Tamberlik, Faure, Ronconi, and Graziani will take their places as of old. The list of operas promised, including two new ones and the revival of "L'Etoile du Nord," which was played only a few nights in the season of 1855, is long and good.

Haymarket. — The monopologue "Bunkum Muller" enables Mr. Sothern to show his possession of other qualities as an actor than those evident in the part that has already made him justly famous. "Bunkum Muller" is full of absurdity; but the completeness of the assumption and the continuous rattle and force of the actor carry it through triumphantly, and will do so for some time to come.

Princess's.—It is not merely the remarkable similarity one to another of the Messrs. Webb which distinguishes their assumption of the two *Dromios* in the "Comedy of Errors," but their peculiar and telling humour. The play, uninterrupted by the fall of the curtain from beginning to end, runs on most glibly, aided of course very materially by the acting of Mr. George Vining, and the audience are kept in a continued state of excitement from the *end* of the first scene to the close of the piece. New scenes have been provided by Mr. F. Lloyd and Mr. Fenton, characteristic and bright, though apparently hasty.

ACCIDENTS TO PERSONS AND PROPERTY.

A WORKMAN employed at the railway works of the London, Chatham, and Dover Company at Blackfriars lost his footing while at work and fell into the river, where he was drowned.——At Nottingham, while workmen were employed on the roof of Franconi's Circus, in course of erection there, the sides gave way and the building fell in, precipitating several of the workmen to the ground, and severely injuring two of them. The accident is attributed to the swelling of the timber by the late rains.——An inquest at Brighton has just returned a verdict of accidental death in the case of a poor fellow employed at the new hotel works in October last, when he laid hold of a wrong rope in attempting to descend to the ground floor by the shortest way instead of going down by the staircase. He was drawn up and got his hands so lacerated by a wheel through which the rope passed that he quitted hold and fell a depth of 82 feet, injuring his spine so severely that he has since died.——At Walsall about 250 feet in length of a railway buttress wall 20 feet high fell suddenly across the line carrying with it various buildings. The line was also flooded by the breaking of a large water-pipe.——A large portion of the embankment on the new line between Llandovery and Llanwrtyd, Wales, recently gave way, and buried two of the workmen. After fifty men had been labouring twenty-four hours, the bodies of the two unfortunate men were dug out frightfully mutilated.——Whilst a joiner was at his work at the new goods station, Monk-bridge, belonging to the London and North-Western and Lancashire and Yorkshire Railway Companies, a prop which supported a pair of "principals" gave way, and one of them—a piece of timber of the weight of 25 cwt.—fell, striking him on the head and killing him. A verdict of accidental death was given under the circumstances.

Books Received.

Shakspeare. The First Folio Edition of 1623. Reproduced under the Supervision of HOWARD STAUNTON. From the Originals in the Libraries of Bridgewater House and the British Museum, by Photo-Lithography. Part I. London: Day & Son, Gate-street.

IT was a good thought on the part of Mr. Staunton to apply the process by which a photograph can be transferred from the collodion negative to zinc or stone, to the reproduction of the earliest authentic texts of Shakspeare's works; and thanks to Messrs. Day, the thought is becoming a fact. The most important of the early editions is the famous First Folio of 1623,—"Mr. William Shakespeare's Comedies, Histories, and Tragedies. Published according to the True Originall Copies. London: printed by Isaac Iaggard and Ed. Blount. 1623;"—and with this the publication commences. Part I., now issued, contains "The Tempest," "The Two Gentlemen of Verona," and part of "The Merry Wives of Windsor," with the "Figure" that "was for gentle Shakespeare cut," and the dedicatory letters and poems. Fifteen similar parts will complete the book, and place within the reach of many what is now unattainable by any. In the reprints, errors have been unavoidable: by the process adopted for the present reproduction, accuracy is certain. The work will be warmly welcomed by all Shakspearian scholars.

Miscellanea.

THE LATE WILLIAM BEHNES.—The intimate friends of this sculptor have formed a committee, to collect subscriptions, with the view to present a bust of the deceased artist to some art institution, and to raise a monument over his grave in Kensal-green Cemetery. Mr. George Cruikshank will act as hon. treasurer, and Mr. Morton Edwards as hon. secretary.

ST. PAUL'S, STRATFORD NEW TOWN.—We hear that a portion of the above newly-erected church will be taken down, as the building is not according to the original plan and contract. The building committee, it is reported, intend compelling the builder to comply with the terms of the contract.

THE PROPOSED NEW WELL AT CROYDON.—Inquiries having been ordered by the local Board of Health into the abilities of Messrs. Lavers and Hall, it was reported that the latter had only sunk two wells, and the former was unacquainted with the sinking of wells with iron cylinders. Mr. Docwra being a party, it was said, well acquainted with such work, his tender has been finally accepted.

MONUMENTAL.—The dean and chapter of York cathedral have given their sanction to the erection of a memorial of Mr. Justice Wightman in the cathedral; the memorial to assume the form of a stained glass window. A subscription list is about to be opened.——A monument has been erected in St. Andrew's Church, Newcastle-on-Tyne, to the late Dr. William Carr, who died from malignant fever caught in the exercise of his professional duties in the fever hospital of the town. The monument has been erected in the south transept: it is in the Gothic style, and of Caen stone, backed with marble. The design was furnished by Mr. Thomas Oliver, architect. The memorial is in the form of a Gothic canopy, after the early French style, supported on a moulded sub-base, and ornamented plinth, with trefoil sinkings, inlaid with Emperor's red marble. Messrs. Craggs & Son, of Newcastle, were the sculptors employed.——It is proposed to erect a statue of Sir Rowland Hill at Birmingham. A committee has been appointed, and a subscription list opened. The erection of statues of living men is not usual. Prince Albert discouraged the erection of such a monument to himself, and thereby showed an excellent example. Moreover, Birmingham may propose such a statue, but will it succeed in erecting it?

Holborn Valley Improvement Bill.—The Parliamentary Committee, after hearing evidence, have declared the preamble of the Bill proved. The total estimate of the proposed improvement is about 500,000*l.*

The Metropolitan Death Rate.—The health of London still continues unsatisfactory. In the last week the deaths rose to 1,677, of which number 741 occurred under twenty years of age, 558 in the period of life from twenty to sixty years of age, and 427 at sixty years of age and upwards.

Milford Haven.—A company has been formed to raise 220,000*l.* to make locks, floating basin, graving dock, wharfage, jetty piers, &c., at Milford Haven. The vast colliery fields, and the chief towns of Wales, are all connected with Milford by a network of railways, as are also London and the north; and very shortly Manchester, too, will be joined by a direct through route. Vessels can sail inwards or outwards whatever the state of the tide may be, and in almost any weather, and the Haven has no bar.

Improvement of Liverpool.—At the last meeting of the Liverpool Town Council, the new bill which authorises the construction of several new streets and other improvements for the borough was under discussion. The principal portion of the scheme is the construction of a high-level bridge extending from the Free Public Library in the direction of the docks to Dale-street. The construction of this bridge was warmly opposed by several members. The cost, it was said, would be 100,000*l.*; and Mr. Gladstone said the claims for compensation would probably equal that sum.

Suffocation in a Bedroom.—An inquest has been held at Gloucester on the body of Mrs. Gough, who lost her life under the following circumstance:—Mr. and Mrs. Gough went to bed about nine o'clock, the latter carrying upstairs about half a bucketful of glowing cinders, just stirred from the grate, which she placed in the bedroom to warm it. The room was small, and possessed scarcely any means of ventilation. Every breath of fresh air had been jealously excluded—the chimney aperture was closed with a board, the windows fitted tightly, and the door was locked. On the following morning, Mr. and Mrs. Gough were found in a state of insensibility, and the latter died about four o'clock in the afternoon. The jury returned a verdict of "Accidental death."

Timber Auctions at Birkenhead.—On the 25th ultimo, at Mr. Edward Challoner's sale, at the timber slip at the Great Float, the timber trade were enabled to judge of the capability of that locality for conducting a branch of this extensive trade of the Mersey. The sale was well attended; and though the smaller cargo of Quebec woods, per *Rienzi* (save the small oak sold at 2s. 9d. per foot, staring and billets at 3s. 6d. per foot, calliper measure) was withdrawn, the very large cargo of the *Pensacola*, from Quebec (little exception), met ready sale at the following prices:—48,471 feet yellow pine timber, 47 feet average, at from 12½d. to 17d. per foot; 12,707 feet red pine timber, 47 feet average, at from 16d. to 20½d. per foot; 1,804 feet white wood, at 2s. 3d. per foot; 1,509 feet elm timber, at 1s. 6d. per foot; 2,109 feet oak, at 3s. 1½d. per foot; 2,325 pieces bright pine deals, second quality, at from 10*l.* 10s. to 10*l.* 15s. per standard.

Mallet's Construction of Piers and Walls.—In putting in the foundations to walls, piers, and similar structures, it is preferred to make the iron caissons of much greater length than has heretofore been usual. The peculiar coffer-dams which form part of the subject of this invention are built on the top edges of these caissons as high as may be desired, and are bolted thereto. They are constructed in large sections similar and interchangeable, made of a strong frame of iron covered with metal plates, preferably as those known as Mallet's buckled plates. A continuous double line of water-tight coffer-dam is formed capable of being taken from at one end and added to at the other as the work proceeds. Another part of the invention consists in attaching or mooring floating landing-stages to the shore solely by means of a system of diagonal bracing, forming a framework which is to be hinged to the shore and dummy respectively, thus preventing any horizontal movement of the dummy, while it is allowed free play in a vertical direction for the rise and fall of the water surface. This system of mooring forms also the support for the approaches.

Locke Park, Barnsley.—The local Board of Health have received the conveyance of the Locke Park from the solicitors of Mrs. Locke, who also intimated that she would invest 1,000*l.* for keeping the park in an efficient state.

Landslip on the Edgware and Highgate Railway.—Owing to the recent heavy rains, a large quantity of earth fell into the cutting in the Highgate Archway-road, and completely blocked up one of the entrances to the tunnel now in course of erection there.

Waste of Powder and Property.—It is estimated that 900,000 lb. of powder will be required to blow up the Ionian fortresses. This represents about 23,000*l.*; to which may be added an odd 5,000*l.* for other expenses of labour and material, freight, &c.; so that 30,000*l.* will barely defray the charges of destroying something like a million sterling of property;—equivalent to the doings of an ordinary earthquake.

Inquiry as to Schools of Art.—On the motion of Sir S. Northcote, a select committee has been appointed to inquire into the constitution and working, and into the success, of the Schools of Art wholly or partially supported by Government grants, or otherwise assisted by the Government, and into the system upon which the sums granted by Parliament for the promotion of national education in art are distributed and administered.

Subways.—Mr. Tite has laid before the House of Commons a Bill respecting the use of subways constructed by the Metropolitan Board of Works. It is proposed to give power to the Board to require that all pipes already laid or to be laid under the surface be laid in the subway; but in regard to the removal of a pipe laid under the surface before the construction of the subway there is a power of appeal to the Board of Trade on the question whether the pipe can be removed consistently with a due regard to the purposes for which it is used. All companies and persons are to have equal right, without favour or preference, so far as space will admit, to lay gas, water, or other pipes in the subways. The Board may demand rent for the use of the subways, the amount to be determined by arbitration in case of difference.

New Hospital for Chorlton-on-Medlock.—This hospital will be erected in the rear of the workhouse at Withington. The building will be erected on the pavilion principle, and lighted on both sides. Each pavilion will contain three wards, with 32 beds in each. The internal measurement will be 124 feet by 24 feet, and 14 feet 6 inches in height, allowing 1,300 cubic feet of air for each patient. Each ward will be provided with suitable accommodation for the nurses. The windows will be opposite each other, and due care will be taken to provide efficient ventilation. Between each block of buildings will be a wide open space for the recreation of patients; and over the corridor which will connect the pavilions will be a promenade of about 220 yards in length.

Chester School of Art.—The medals, prizes, and certificates gained by the students at this school, in the recent Government examination, have been distributed by the mayor, at the Mechanics' Institution. At the meeting, the honorary secretary to the school, in the course of his remarks, said, that from January, 1853, when the school was established by Mr. Davidson and himself, until the present time, the amount of pecuniary assistance received from the citizens of Chester, over and above the absolute payments required for the pupils, was below 40*l.*; that was to say, the city of Chester, during the twelve years, had not contributed 40*l.* towards the undertaking. During the last six years, however, they had received from Government upwards of 800*l.* to promote that which the inhabitants of the town ought to support. The school was a self-creation, and they were exclusively indebted to Mr. Davidson for the creation of it. In addition to its existence there, a branch school had been established at Wrexham, and another at Crewe, at which latter place especially he had heard but one uniform testimony of the value of the teaching. During the last six years no less than 16,000 scholars had been taught in Chester, Crewe, and Wrexham by Mr. Davidson, giving an average of 2,700 in drawing alone. On the day following the meeting, Mr. Davidson gave a lecture on "Animated Nature," the portion of the subject selected being birds. The hall was densely crowded in every part.

A National Gallery in Berlin.—It has been decided to erect a National Gallery in Berlin. The site chosen is in the neighbourhood of the new museum, and the plans have received the approval of the king.

New Colour with Iodine.—From the specification of a patent by Professor Hofmann, we learn that a new colouring matter, which dies silk and wool of a beautiful violet, blue violet, or red violet tint, has been produced with iodine. It has long been thought that if iodine, which yields a vapour in heat of an intense and magnificent violet colour, could be used as a colouring substance, it would be one of the most powerful known. The patented process consists of mixing rosaniline, in certain proportions, with the iodides of ethyl, methyl, or amyl.

Death of Sir William Brown.—Liverpool has lost a great benefactor. Sir William Brown, who erected the free public library and Derby Museum,—opened in 1860, at a cost to himself of upwards of 32,000*l.*,—had reached the goodly age of eighty when he died. The baronetcy was conferred upon him only last year. His grandson succeeds to his title. The deceased was one of the principal merchants of Liverpool. He was born in Ballymena, educated in Yorkshire, and commenced business in Baltimore, U.S. In 1809, he founded the firm, in Liverpool, afterwards well known as Brown, Shipley, & Co., the leading house in the American and Liverpool trade. We should have expected that half Liverpool followed him to the grave. We are told that no one went but those who were invited. Strange!

Telegraphic Progress.—The *Great Eastern*, it is said, has been chartered to carry the Atlantic cable for its submersion next summer. ——The Submarine Telegraph Company's half-yearly report states that the receipts for the past half-year, derived from 185,380 messages, amounted to 25,184*l.* 1s. 2½d.; for the half-year ending 30th June, 1863, from 160,404 messages, to 22,144*l.* 2s. 8½d.; and for the half-year ending 31st December, 1862, from 172,881 messages, to 23,427*l.* 5s. 6½d. A dividend at the rate of 4 per cent. per annum was declared, although the capital has been largely increased by the issue of new stock. The sum of 2,518*l.* 8s. 2d., being 10 per cent. on the receipts, was also added to the reserve fund (which now amounts to 6,441*l.* 7s.). The salaries of the directors were increased from 500*l.* to 1,000*l.*——The numerous submarine telegraph cables now at work in Europe are in the aggregate upwards of 5,600 miles long. These cables range from four miles to 1,500 miles each in length, and they are sunk in water varying from 90 to 9,400 feet in depth. ——At the Royal United Service Institution recently, a lecture was delivered by Lieutenant A. H. Gilmore, R.N., on "The Application of Electric Telegraphy to the Steering and General Management of a Man-of-war." Lieutenant Gilmore's naval telegraph has, it is said, been fitted successfully on her Majesty's yacht the *Victoria and Albert*, on the *Orlando*, and on four other ships.

The Proposed New Police-station, Bath.—At a recent meeting of the Bath town council, the report of the watch committee on this subject was read, which stated that, in accordance with the resolution of the council, passed on the 8th of December last, they advertised for tenders for re-building the central police-station, and received fifty; viz., six for the whole of the works, five for the masons' work, nine for the carpenters' and joiners' work, eight for the slaters' and plasterers' work, four for the smiths' work, eight for the plumbers' work, nine for the painting and glazing work, and one for all the work except the masons' work. The highest of the tenders for the whole of the works was 1,900*l.*, and the lowest 1,468*l.* The committee, after careful consideration, thought it would be best that the whole of the works should be executed by one contractor, and decided to recommend that the tender of Mr. G. C. Mann, for the whole of the works, at the sum of 1,476*l.*, be accepted. The committee also recommended that 50*l.* be granted them for excavating the works between the police-station and the Guildhall, and other minor matters, which it was thought should not be included in the specification. On the motion that the report be adopted, a good deal of discussion took place, and at length it was resolved to re-open the whole question. The site was much objected to as too limited, and rendering the plans unsatisfactory.

METROPOLITAN BOARD OF WORKS: SUPERINTENDING ARCHITECT'S SALARY.—At the ordinary meeting last week, the streets committee recommended that, in consideration of the increased duties of Mr. Vulliamy, the superintending architect, and the apportionment of a proportion of the establishment charges of the Board to the Thames Embankment and Mansion-house street fund, his salary should be increased from 800*l.* to 1,000*l.* per annum. The motion was carried on a division, by a majority of 29 to 4.

THE OFFICE OF BOROUGH ENGINEER AND PROPERTY SURVEYOR AT NEWCASTLE-UPON-TYNE.—From a list of fifty-three applicants for this office, the following seven gentlemen have been selected for further consideration and decision at a special meeting of the town council to be held on the 16th inst., for the purpose of filling the vacant office:—Messrs. T. D. Barry, T. A. Britton, J. Fulton, J. Lamb, E. N. Macdougall, E. L. Stephens, and G. Ridley.

METROPOLITAN RAILWAY SCHEMES.—The Earl of Granville called attention in the House of Lords, on Monday, to the report of the select committee on railway schemes, and moved that the following bills be not proceeded with in the present session:—Victoria Station and Thames Embankment Railway, Oxford-street and City Railway, London Main Trunk Underground Railway, Charing-cross (Northern) Railway, Charing-cross (Western) Railway, Tottenham and Hampstead Junction Railway (extension to Charing-cross), London Union Railways, and Tottenham and Farringdon-street Railway. The motion was agreed to.

LENGTH OF WORKING DAY IN LIVERPOOL BUILDING TRADES.—A question of importance to the local building trades came lately before Mr. J. K. Blair, as judge, at Liverpool. The plaintiff was a joiner, and the defendant, his employer, was a builder. The rule of his workshop, as to the length of the winter day's work, differed from that of the Joiners' Association to which plaintiff, who had infringed his employer's rule, belonged. The suit was instituted to recover a week's wages for summary dismissal. The judge gave a verdict for the defendant, on the ground that the workmen employed by Mr. Hughes, the defendant, were bound by the rules adopted at his particular place of business. This decision disposed of three other similar cases.

CASE OF INJURY AT THE PICCADILLY MAIN DRAINAGE WORKS: NEWTON *v.* THE LONDON GENERAL OMNIBUS COMPANY.—This was an action in the Lord Mayor's Court, before the recorder and a common jury, to recover compensation for an accident occurring through the alleged negligence of one of the defendants' servants. It appeared that in October, last year, the open cutting in Piccadilly, for the Main Drainage works, was protected in some measure by the paving-stones, which were built up in a kind of wall about 2 feet from the cutting. Plaintiff was employed down the hole, and it was deposed in his behalf that a 'bus belonging to the defendants carelessly drove, in passing, against the pile of stones, knocking a quantity down the hole upon the plaintiff, who was much injured about the head. For the defence it was endeavoured to be shown, that the omnibus was driven against the stones by a cart that drew across it, and that it was the duty of the plaintiff's employers (the contractors) to have fastened the stones more securely, or placed a fence round them. The jury awarded plaintiff 50*l.* damages.

THE THAMES EMBANKMENT IN CHANCERY: MACEY *v.* THE METROPOLITAN BOARD OF WORKS.—This was a motion before Vice-Chancellor Wood to restrain the defendants from continuing their works in front of Milford Wharf, on the banks of the Thames, until compensation was awarded to the plaintiff. The defendants had recently drawn up barges in front of the plaintiff's wharf, and commenced discharging chalk, stones, and rubbish into the river, in order to commence the formation of the embankment. The plaintiff insisted that they had no right to take this course until provisions for compensation were made, inasmuch as it amounted to a direct interference with his property. The Vice-Chancellor said that there appeared here to be no trespass whatever on the plaintiff's land, nor any act done which prevented his going again and using it. And in such case alone should an injunction go. There would be damage, no doubt, but that was a question to be considered hereafter. He must refuse the motion. Costs to be costs in the cause.

FRENCH IRON TRADE.—The contract for delivering at Alicante a large consignment of rails has been adjudged in favour of the tenders supplied in Paris, which ranged in price from 11*f.* to 17*f.* per ton lower than British proposals.

THE JOINERS' STRIKE AT ST. HELEN'S.—This strike has lasted for six weeks, and from what has transpired within the past few days there does not seem to be the slightest probability of an amicable settlement. It is now, like many other strikes of a similar character, likely to die away, after having entailed a great loss on the employers and the employed, and caused distress and suffering to the workmen and their families.

THE PROPOSED PARK FOR HULME AND CHORLTON-UPON-MEDLOCK, MANCHESTER.—The Manchester council have resolved that application be made to the Poor-law Board to advance, under the terms of the Public Works Act, the sum of 30,000*l.*, for the purpose of purchasing and forming a public park, in the case of a convenient site upon satisfactory terms being obtained. They have referred the matter to their committee for general purposes, to inquire and report as to the project.

VALUE OF PROPERTY.—The freehold estate of the late Lord Lyndhurst, Nos. 25 and 26, George-street, Hanover-square, was disposed of in two lots. The first included the spacious freehold mansion No. 25, George-street, situate on the east side, close to Hanover-square, for many years the residence of the noble lord; all the fixtures included in the purchase. This lot was adjudged to Mr. Duddell, at the price of 13,000*l.* The second lot, the family residence No. 26, George-street, Hanover-square, adjoining the mansion of his lordship, let by the year to Dr. Hawkesley, was knocked down to the same gentleman, at the price of 5,000*l.*

BEAMS OF WROUGHT-IRON AND BRICK.—At the ordinary general meeting of the Institution of Civil Engineers of Ireland, on December 2nd, 1863, a paper "On Beams of Brick and Wrought Iron" was read by Mr. J. Price, and is reported at some length in the *Engineer* of the 4th inst. The author stated that about two years ago he was led to make use of a peculiar and novel mode of construction for crossing openings, which, under certain circumstances, possesses advantages over the various forms of girders and bressummers commonly used. Being aware of the use of brick arches with tie-bars to take the thrust, it occurred to him that in some cases where an arch was not admissible, stability might still be obtained by a flat beam of bricks, resting on, and connected with, a wrought-iron tie-bar, which forms, in fact, the bottom chord of a beam, bearing the tension, the compressive strains (whose resultants pass from the centre of the top to the abutments at the bottom) being carried by the bricks. Shortly afterwards, an opportunity presented itself of trying, on a small scale, the correctness of these views. Details were then given, and in conclusion the author remarked that a little experience, and a few trials, would soon get rid of all difficulties; and, by gradation, larger spans might be attempted.

THE SYMBOLISM OF COLOUR.—The colour of mourning at the death of near relations is yellow in some Asiatic regions, and among the Quiches, in Guatemala; brown, among the Persians; blue, among the Turks; white, among the Chinese, Anamese, and Siamese; the colour is dark blue in Elmina and dark blue and black among the Quichaus. The Australian, when in mourning, paints his body white, or draws merely a white line across his forehead, nose, or cheeks. The Omahas also use white paint when in mourning; whilst among the natives of North America, black is generally the colour of mourning, and red the colour of war. Among the Mandengoes, in the region of Sierra Leone, white is the symbol of peace. Among the Ashantees and other negro peoples, white is the colour of joy, and they paint themselves white on their birthdays. Priests, ambassadors, and warriors are dressed in white among the Yebus. Persons who have gained a suit, or been acquitted of some crime, dress in white in some parts of Africa. The natives of Elmina, in opposition to the belief of other negro tribes, imagine the good god to be of white, and the bad god to be of a black colour. Among the inhabitants of Tierra del Fuego white is the colour of war, red that of peace and friendship. Yellow, the favourite colour of the Malays and the lowest Hindoo castes, is at the same time the colour of priestly clothing among the Burmese.—*Waitz's Introduction to Anthropology.*

TENDERS.

For new schools, Turnham-green, for Miss Taske. Mr. E. Welby Pugin, architect. Mr. S. Marples, surveyor:—

Kelly	£3,500 0 0
Smith	3,500 0 0
Jackson	3,291 0 0
Cowland	3,290 0 0

BRICKMAKING, BY STEAM OR HORSE POWER,
BUNNETT'S PATENT
CONTINUOUS FEED MACHINES

Are the cheapest and most efficient, and will make from 5,000 to 20,000 bricks per day, according to the power applied and the requirements of the proprietor, at one-third less working expenses than any others.

Price 75l. including royalty, and a gun metal die for Solid, and Perforated or Hollow Bricks.

They also make all kinds of Sanitary Pipes, Tiles, or Moulded Bricks, of a superior quality.

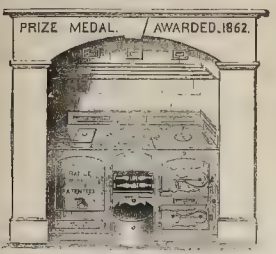
LICENCES GRANTED TO MANUFACTURERS.

For particulars apply to BUNNETT & CO. Engineers, Deptford, Kent, where the Machines may be seen at work.

FIRE BRICK and CEMENT WORKS,
WOODEN BOX, near BURTON-ON-TRENT.
Established 1845.
JOHN KNOWLES,
HAWLEY NEW WHARF,
HAMPSTEAD ROAD, CAMDEN TOWN, N.W.
Fire Bricks, Tiles, and Lumps of all sizes, or made to order on short notice.
Crucible and Cement Clay, Waterside and for Exportation.
EVERY ARTICLE MANUFACTURED AT THE ABOVE WORKS.
N.B. These goods are supplied to the largest Steel Smelting, Armour Plate, and Iron Shot Works in the World, to which references can be given, on application.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr. ROBERT WEITS, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two-fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licences for use of the Patent granted to Brickmakers, on application to the Patentees, 17, Millbank-street, Westminster.

NO SHUTTER BARS.



JENNINGS'S SHOP-SHUTTER SHOE.
SHOP SHUTTERS are SHOD and SECURED by the above, at HALF THE COST OF THE UNSIGHTLY AND DESTRUCTIVE SHUTTER BAR. Shops referred to in every public street in London. When ordering please state what FINISHED THICKNESS of Shutters, also the way they go up.
Sold by all Ironmongers, and the Inventor,
GEORGE JENNINGS,
Engineering Depot, Palace Wharf, Strange-road, Lambeth, S.

And Letter C Railway Arches, and Iron Bridges.

BROOKS & SCHALLER (removed from Piccadilly).—The INDEX, printed MONTHLY (first published in 1809), of SHOPS, Country and Town Houses, Mansions, Hunting Quarters, Shootings and Fishing, Farms, &c. TO BE LET or SOLD, can be had (free) at their Offices, 25, Charles-street, St. James's, S.W., opposite the Junior United Service Club. Particulars inserted without charge, but for next publication must be forwarded before the 28th of each month.

PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862. AWARDED FOR EXCELLENCE.

The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.

It is an entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT-IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 8 feet wide.

Extracted from the "London Daily Telegraph," May 19th, 1862.

"INTERNATIONAL EXHIBITION, CLASS 31.

"Of the most recent inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of their Ranges is the placing of the OVEN and ROASTER one above the other instead of *side* by *side*; and the ROASTER is constantly replenished with fresh air."

INVENTORS AND MANUFACTURERS,
JONES & ROWE, WORCESTER,

CATTLE TROUGHS, GIRDERS, CART BODIES, &c.

Omnibuses from Limehouse Station, Blackwall Railway.

WROUGHT-IRON TANKS, CISTERNS, GIRDERS, FUNNELS, &c. plain or galvanized; CATTLE TROUGHS, IRON CART BODIES, &c.

BURNEY & COMPANY, Mill-wall, London.
Steam-boats from London Bridge call near the Factory.

TO BRICK MASTERS AND OTHERS.

TO BE LET, a BRICKYARD, on the Severn Side, near to MALVERN (possession can be had at once), with good ENGINE, kiln, stove, pipe machine, &c. all complete in good working order, well situated, and with a good business in the Brick and Pipe Trade, with or without about 15 ACRES of MEADOW LAND. Satisfactory reasons given for present occupiers giving up the same. Application to be made to Mr DAVID PRIEST, Chiffey Brickyard, Severn Stoke, near Worcester; or Mr. JOHN JENNINGS, Bristol Fields, Oldbury, near Birmingham.

WATERSIDE PREMISES.—TO BE LET, on LEASE, a capital WHARF, having a frontage of 127 feet to the Cityroad Basin. The buildings comprise counting-house, dwelling-house, containing four rooms, corn and chaff stores, stabling for 12 horses, with large yard, and barge yard adjoining, engine-house, with chimney shaft, smithy, carpenter's shop, &c.; the total superficial area being 16,450 feet.—For further particulars apply to Messrs. FULLER & HORSEY, 14, Billiter street, E.C.

IMPORTANT to COAL PROPRIETORS, CAPITALISTS, and OTHERS.—The owners of valuable MINES of COAL, lying within and under a compact freehold estate of upwards of 150 acres, situate about three miles from the important manufacturing town of Blackburn, Lancashire, are prepared to treat for the absolute SALE of the COAL, or to enter into favourable arrangements for leasing the same for a term of years. Good turnpike roads intersect the estate, and the same is within very easy distance of railway and canal.—For further particulars apply to Messrs. ROBINSON & SON, Solicitors, Blackburn.

A FREEHOLD MANSION TO BE SOLD. The elegant Furniture may be had at a valuation. There are four reception-rooms, two being 50 feet in length; eleven best bedrooms; stabling for eight horses and four carriages; suitable servants' offices; extensive ornamental grounds, with green-houses, in all 28 acres; gravelly soil; near Sunningdale Station, South-Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. MAY, Esq. Solicitor, 67, Russell-square.

BUILDING LAND, at KENTISH TOWN.—TO BE LET for VILLA RESIDENCES.—Term, 99 years. Road, Paving, and Sewer may be included in Ground Rent, and improved Ground Rent purchased. For plans and terms apply personally to Mr. JOSEPH SALTER, Land Agent, No. 311, Kentish-town-road, N.W.

TO STONE MERCHANTS, BUILDERS, and OTHERS.—TO BE LET, a WHARF on the GROSVENOR CANAL, with powerful crane on the premises.—Apply by letter to M. at Grugeon's, 75, Old Broad street, E.C.

BUILDING GROUND TO BE LET, in the City of London, from Midsummer next.—The site of the house No. 54, Fore-street, now occupied by Mr. E. Levin, containing a double frontage, that in Fore-street being 29 feet 4 inches, and in Coleman-street 41 feet 4 inches; also, other Building Ground, nearly close adjoining, viz. the site of the house and premises, No. 8, New Bank-hall-street and No. 128, London-road, now in the occupation of Messrs. Burrowes & Samuelson, having a frontage in New Basinghall-street of 40 feet, and a second or return frontage in London-wall of 29 feet 4 inches. Each of the foregoing premises are within three minutes' walk of the Bank of England; close to the Manchester and Lewis markets, and opposite the proposed station of the Metropolitan Railway, Finsbury, which will give great facilities for communication with every part of the United Kingdom, and with the port of London.—Full particulars may be obtained at the Offices of Mr. RICHARD SUTER, Architect and Surveyor, 18, Fenchurch street, E.C. where plans of the premises may be seen. TENDERS for each of the above Building Leases, to be sent in on or before THURSDAY, the 24th of MARCH next, at TWELVE at noon, at the above offices, addressed, sealed up, and endorsed "Tender for Premises, Fore-street and New Basinghall-street respectively." The Trustees of the Estate do not bind themselves to accept the highest or any Tender.

28, Fenchurch-street, E.C. February 19, 1864.

TO BE LET or SOLD, close to Park Station, Tottenham, several very eligible PLOTS of LAND, for six-roomed houses. Liberal advances if required.—Apply to Mr. SWALES, on the Estate, Park-lane, Tottenham.

TO STONE MERCHANTS, BUILDERS, and OTHERS.—TO BE LET, a WHARF, on the Grosvenor Canal, with powerful Crane on the premises.—Apply, by letter, to P. M. at Grugeon's, 75, Old Broad-street, E.C.

MANUFACTURING PREMISES TO BE SOLD, near Shoreditch, with Twenty horse power Steam-engine, vertical frames, circular saws, &c. suitable for a builder, or any business requiring good yard and large premises. Address, R. S. M. Office of "The Builder."

SEAFORD, near NEWHAVEN, SUSSEX. To Builders and Others.—Eligible PLOTS for BUILDING, with full sea view, and comprising every advantage, TO BE LET on Building Leases for 99 years. The railroad is to open in less than a month, and it runs directly into the centre of this beautiful and sheltered watering-place.—For plans and particulars apply to Messrs. WM. G. HABERSHON & PITE, Architects, 38, Bloomsbury-square, London, W.C.—Mr. OCKENDEN, Bailiff of Seaford, will show the ground.

SANDOWN, ISLE of WIGHT.—Opening of the Railway.—BUILDING LAND, opposite the proposed Pier, and in full view of the magnificent Bay, on leases for 1,000 years.—Apply to Mr. WITHERS, Timber Merchant, Sandown.

BUILDING LAND at DULWICH TO BE LET, suitable for Cottages or Small Villas. A Pair of super or Cottages to be Sold, just completed from Designs by the Architect.—Apply to THOMAS PORTER, Esq. Architect, 15, Bedford-row, W.C.

NEAR CHARING CROSS.—Superior OFFICES TO BE LET, recently Repaired and Decorated, with due attention to light and convenience.—Apply to the House Keeper, 10, John street, Adelphi.

TO PLUMBERS, PAINTERS, &c.—TO BE LET, a HOUSE and SHOP in the above line, situate 12 miles from London. The neighbourhood is fast improving, and at present surrounded by gentlemen's houses. Satisfactory reasons for leaving. About 40*l* required for premises. Rent, 3*l* 3*s*. per annum.—Address, A. E. O. 29, Wynyate-street, Goswell-road, E.C.

LEWISHAM.—TO BE SOLD, by Private Treaty, a Valuable FREEHOLD ESTATE, of about 20 acres, with frontages to main roads. Land tax redeemed. Or, the Land to be Let on Building Leases for first-class Villa Residences.—Particulars may be obtained on application by letter (prepaid) to PHILIP D. LEE, Esq. 89, Warwick-street, Belgravia, Architect to the Freeholder.

ELIGIBLE FREEHOLD PREMISES TO BE SOLD, situate in a leading thoroughfare, within five minutes of the city, comprising FOUR HOUSES, with back yard and workshop, and back entrance; frontage about 100 feet, depth 70 feet. Suitable for any business purposes, or for the erection of a manufactory or warehouses.—For particulars, apply to Messrs. PHILLIP & SON, Auctioneers, No. 2 City road, Finsbury square.

FREEHOLD LAND in the CITY of LONDON.—WANTED TO PURCHASE, a PLOT of FREEHOLD GROUND, within the City of London, with a superficial area of about 5,000 feet.—Tenders, with particulars and terms, to be forwarded to J. S. care of Messrs. Cree, Law, & Company, Solicitors, Rush-lane, not later than MONDAY, MARCH 21st instant.

BUILDING LAND TO BE LET, on advantageous terms, for 99 years, situate at Merton, Surrey, within 10 minutes' walk of the Wimbledon Station or 45 minutes of the City.—The plan of Estate can be seen, and particulars obtained, upon application to Mr. EDWIN SHALES, Surveyor's Office, Christ's Hospital, Newgate street, from TEN till FIVE o'clock.

BRICK EARTH.—To BRICKMAKERS, CONTRACTORS, and OTHERS.—BRICK EARTH for Eight Millions of Bricks, on an estate in close proximity to a West end suburb (where there is a great demand for bricks), and near to the Great Western and West London Extension Railway Stations. Royalty, 2*s* 6*d*. per 1,000. Advances by the Freeholder to the amount of 1,500*l*. if required.—N.B. BUILDING LAND TO BE LET on same Estate.—Apply to Mr. J. C. HILKINS, Architect and Surveyor, Offices, 21, Archer-street, Bayswater, W.

BROMLEY, MIDDLESEX.—FOR SALE by PRIVATE CONTRACT, eligible FREEHOLD LAND, suitable for the erection of factories, and which has a wide frontage to the Bow and Bromley Stations, and a mile from those at Stepney and Limehouse, and about three miles from the City. For plans and particulars, apply to Mr. WHITTINGHAM, 14, Moorgate-street, London, E.C.

HASTINGS.—To BRICK-MAKERS, BUILDERS, and CONTRACTORS.—TO BE LET, with immediate possession, the PLANT of a BRICKFIELD, where steam power is used. The Plant consists of a 12-horse power steam-engine, 16-horse boiler, one of Clayton's patent B B brick machines (which will make from 15,000 to 17,000 bricks per day), the sawing machinery, which may be had at the option of the incoming tenant, with barrows and planks to work the machine, and covering for back-ground for 100,000 bricks. The clay is of a very superior sort, nearly white, and, quite free from stone. This yard is part of an estate of 40 acres recently laid out for building purposes, thus insuring a large sale on the spot. The whole of the above can be had at fair valuation, or, if preferred, at a rent equivalent to outlay.—Further particulars of the Proprietor, Mr. S. HAYWARD, Ore, near Hastings.

FINE CLAY PROPERTY.—TO BE LET on Royalty, sixty miles from town, with every convenience and siding laid down into North Western Railway.—Apply to C. W. ORFORD, 38, New-street, Birmingham.

WESTMINSTER CHAMBERS, opposite the India Offices in Victoria-street, and close to the Houses of Parliament.—OFFICES and CHAMBERS TO BE LET.—Apply to Messrs. BANKS & BARRY, 27, Sackville-street, or G. S. SIDNEY, Esq. Secretary to the Mutual Tontine (Westminster) Association, Limited, No. 49, King street, Cheapside, E.C.

TO BRICKMAKERS, CONTRACTORS, and OTHERS.—BRICK EARTH.—TO BE SOLD, several acres of first-rate BRICK EARTH (with ample room for making) at Sittingbourne, Kent. Watercarriage to London at the door. For particulars apply to Mr. W. J. HARRIS, Sittingbourne.

FOR IMMEDIATE DISPOSAL, the PRACTICE of an ARCHITECT and SURVEYOR in a provincial town of 200,000 inhabitants. To insure a speedy sale, 300*l* will be taken for the Goodwill and Furniture of the Offices together with Instruments, Books, &c. all of which are in very good order. It is believed the whole sum will be realized from the client alone the first year should the purchaser be energetic and business-like. As this is a genuine affair, and well worthy the attention of an active person of energetic, young, and talented training to commence practice, an early application is requested, and none but principals will be treated with. All particulars, with an inventory of furniture, &c. will be sent on application. Half the money may remain for six months, on approved security, if required.—Address at once, Q. B. Office of "The Builder."

TO BUILDERS.—TO BE DISPOSED OF, the STOCK, PLANT, and GOODWILL of an old-established BUSINESS. About 300 Premises 35 feet by 23 feet, sawing-pit and shed, cellars 40 feet by 12 feet, workshop over, 40 feet by 25 feet, and good dwelling-house. Present occupants retiring.—Address, P. 2, Benbrid street, Bedford row, Holborn.

CONTRACTORS' RAILS.—WANTED, about FIFTY TONS of CONTRACTORS' RAILS, from 28 to 30 lbs. per yard. Must be in long lengths and in good condition.—Address, stating price and where delivered, to PICTOR & SONS, Stone Merchants, Box, near Chippenham.

No 1, SOUTH WHARF, PRAED-STREET, PADDINGTON.

HYDRAULIC LIME AND ROMAN CEMENT, manufactured by LLOYD JONES & CO Halkin Works, Holywell, Flintshire. The Halkin Hydraulic Lime is the same as used in the construction of the Liverpool Docks, Manchester, and various waterworks, collieries, and mines throughout the country, being so long celebrated for its strong cementitious and consequently superior for masonry in water. Can be supplied by rail or water to any part of the kingdom, either in lump (ground), or ground, and in barrels and bags. The limestone can be had in full cargoes, also their cement in barrels, which is of a very superior quality and warranted pure. Orders to be accompanied by a banker's reference. Apply at the Works; or to E. & W. AARON, Agents, 68, South John-street, Liverpool.

JOHNS & CO.'S PATENT PERMANENT STUCCO WASH, STUCCO CEMENT, and STUCCO PAINT.
CLARK & BENGOUGH,

and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 29, Saville-row, London, and at the Museum of Practical Geology, Jermyn-street, W.

This stone (which is a perfect oolite) is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

*** The above WEATHER STONE is 1s. 9d. per cubic foot, delivered in London.

W. & J. FREEMAN, Merchants in the various descriptions of STONE, GRANITE, and SLATE, for Engineering and Building Purposes. Supplies direct from the Quarries, by vessel or railway. Direct communication with the principal ports for EXPORTATION. Wharf prices and estimates for special contracts, including quarry work or other labour, forwarded on application.—Office, 27, Millbank-street, London, S.W.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and

pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor. 2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It affects a saving of half the timber usually required with. It can be easily applied by any ordinary person. 5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.
CROGGON and CO.'S PATENT PLITED BREATHING, for Covering Ships' Bottoms, &c and

J. TYLOR & SONS' PATENT

REGULATOR WATER-CLOSETS.

Valve. Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply-pipe. No stem valves, cocks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick lane, Newgate-street, London.

SALES BY AUCTION.

GREAT ST. HELEN'S.—Building Materials of Two Houses.

PULLEN, HORNE, & EVERSFIELD are directed to SELL by AUCTION, on the PREMISES, on FRIDAY, MARCH 18, at TWELVE, in Lots, all the valuable BUILDING MATERIALS and FIXTURES of Two Houses and Premises, Nos 25 and 26, Great St. Helen's, of the usual description.—May be viewed the day previous, and catalogues had of C. J. CORBETT, Esq. and THOMAS NEWSON, Esq., Architects, 17, Gresham-street, and of PULLEN, HORNE, & EVERSFIELD, 80, Fore street, E.C. and 9, Parliament-street, S.W.

KEYNSHAM BLUE LIAS LIME AND CEMENT WORKS, SOMERSET.

MESSRS. FULLER & HORSEY are instructed by the Official Liquidator to SELL by AUCTION, on WEDNESDAY, MARCH 16th, at TWELVE o'clock at the AUCTION MART, London, in One Lot, unless an acceptable offer be previously made by private contract, the newly-formed FREEHOLD WORKS and ESTATE of the Keynsham Blue Lias Lime and Cement Company (Limited), together with the modern PLANT and MACHINERY. The property is freehold, and occupies a site of 7a. 3r. 26p. or thereabouts. The works were established for manufacturing blue Lias lime from stone quarried on the estate, and for making cement. The existing kilns will cover an output of from 200 to 300 tons of lime and 120 tons of cement weekly; both products are well approved by large contractors and eminent architects. The cement being used in many of the Government fortifications now in progress. Coals are supplied to the works at a very low price, and the Great Western Railway Station is within a short distance. The buildings are very substantial, and the machinery of the best description; the motive power is given by two iron water-wheels, driven by the river Chew, a regular stream of water of great power and there is a steam engine, with boilers, if required. A additional supply of lias stone is secured from adjoining ewn quarries on favourable terms.—May be viewed till the Sale, particulars had at the Mart; and of MESSRS. SLADE & SONS, Solicitors, 47a, Moorgate-street; of F. MAYNARD, Esq. Liquidator, 10, Bread-street, Cheapside; at the Mart, and of Messrs FULLER & HORSEY, 13, Billiter-street, London, E.C.

TO ENGINEERS AND OTHERS.

MESSRS. FULLER & HORSEY are instructed by the Proprietor (removing) to SELL by AUCTION on MONDAY MARCH 21st, at TWELVE, Particulars, in the WORKS, Britannia-school lane, Chiswick, the whole thing PLANT & MACHINERY comprising a useful 12 horse power locomotive high pressure steam-engine, an 8-horse power oscillating steam-engine, a nearly new 10 horse power Cornish boiler, a vulcanizer by Dunlop, glazing calender, with cotton and paper rolls; straining machine, a pair of 6-inch double-acting air-pumps, a lathe, colour-mill, twenty tons of dies, quantity of shafting, and numerous other effects.—To be viewed the day previous and Morning of Sale, when catalogues may be had on the Premises, and of Messrs. FULLER & HORSEY, 13, Billiter street, E.C.

TO IRONFOUNDERS, ENGINEERS, AND OTHERS—SWINDON

MESSRS. FULLER & HORSEY are instructed to SELL by AUCTION, on TUESDAY, MARCH 29th, at TWELVE (or ONE o'clock precisely), in Lots, on the PREMISES, Swindon Foundry, Vastern-rd., Swindon Old Town, the PLANT, TOOLS, and STOCK, including 6 tons 8-inks and boxes, 1 crane on cast-iron standing 2 stories, pot furnace and 4 grinding machines, 2 pulley and shafting machine by Goodwin, fly press, drilling machine, 13-inch centre slide lathe, three 6-inch and 4-inch bore 3-foot stroke, 2 small table steam-engine iron tanks, blocks and tackle, steel tools, stocks, taps and dies, unequal bevels, 12 new grindstones and frames, two portable weighing machines (capable of 2 cwt. and 3½ tons), clod crushing machine, 2 tons of sash-weights, 1 gross plough shares, 3 galvanized iron sheep troughs, 3 chaff-cutting machines, 8 kitchen ranges, 12 iron pig-troughs, 3 ornamental garden seats, quantity of cast iron, wood and leaden pipes, 2 new 2-inch portable trucks, 2 six barrows, an assortment of wood and iron patterns, gas fittings, and other effects.—To be viewed on May 29 prior to the Sale, when Catalogues may be had on the Premises, and of Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

TO ENGINEERS, MILLWRIGHTS, IRON FOUNDERS, AND SAW MILL PROPRIETORS.

MESSRS. FULLER & HORSEY are instructed by Mr. Lee, who is removing to High Wycombe, to DISPOSE of by PRIVATE CONTRACT, the FREEHOLD WORKS at OAKFORD, known as the MILLBANK IRON WORKS, on the banks of the Thames, long and well-established, in good repute, and in full work. The Premises are well arranged, and comprise a spacious Engineers' Factory, fitted with lathes, planing and drilling machines, steam power, & an iron foundry with two cupolas, fan blast, crane, &c. on the 3rd, pattern makers' shop, a newly-erected saw mill, with capital frame by Hare, circular-saw bench, &c. yard and compact dwelling house. The number of hands in the vicinity of Oxford, and the large extent of flooding operations now in progress in the city and district of Oxford, offer an extensive field for a first-class and lucrative business so well established by Mr. Lee. A portion of the purchase-money may remain if desired. From 2,000l. to 3,000l. capital will be sufficient.—For further particulars, apply to Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

To Builders, Plumbers, Glaziers, Church Decorators, Gas fitters, Ironmongers, Bankers, and Others.—Extensive and Important Sale, Nottingham road, Derby.—TO BE SOLD by AUCTION, by

MESSRS. NEWBOLD & OLIVER, on the Premises called "The Convent," on TUESDAY and WEDNESDAY, the 22nd and 23rd days of MARCH, 1864, the following day if required, in convenient lots, all the valuable BUILDING MATERIALS, with some fine Convent House Stuff, as the Convent is now pulling down, and have been recently used therein, with the exception of the Chapel and "House of Mercy," which will be sold standing), consisting of (amongst other things) tiles, slates, bricks, an extensive quantity of stone pitching, paving, kerbs, window sills, building rails, walling, ironstone, carved work and Bath stone, and other carved works of art; stone crocketed bell turrets, stone fronts, Yorkshire paving and other stone, &c. Also all the wood work contained in the various rooms and floors in the entire Convent, consisting of sash frames, doors, wood plates, beams, joists, boards, doors, and other descriptions of timber; also a very large quantity of glass in the windows, of various sizes, plain and ornamental, good as new; a very large quantity of very good cast and wrought spouting; several thousand feet of 4 and 5 inch excellent school or church stoves; a large pair of entrance gates; also a pair of Gothic front doors, together with all the boundary wall fronting Nottingham-road, with ornamental stone balustrades; also the boundary wall round the garden; large quantities of plain and ornamental iron railings; useful wrought iron work, casting for cisterns and a quantity of good wrought and best cast iron, &c. &c. The whole of the stone and brick-work of the beautiful Chapel, with the Gothic windows and also the main brickwork of the building called "The House of Mercy." The sale to commence each day at TEN for ELEVEN to a minute. The whole of the lots are in good condition, and may be viewed two days prior to and on the morning of sale.—For further information apply to the Auctioneers, Derby; Mr. SAMUEL SMITH, Iron Merchant, Derby, and S. R. BADDELEY, Esq. Solicitor, 1, Jeffrey's-place, St Mary Axe, London, E.C.

CREWE.—FREEHOLD BUILDING LAND—TO BE SOLD BY AUCTION, pursuant to a Decree of the High Court of Chan. by order in a Cause Platt versus Edleston, by the Vice-Chancellor Sir John Stuart, V.C., and to whose report the said cause is referred, by

MESSRS. CHURTON the PERSONS appointed for that purpose, on TUESDAY, the 22nd day of MARCH, 1864, at the CREWE ARMS HOTEL, Crewe, at TWO o'clock in the afternoon, in Lots of FREEHOLD BUILDING LAND, of different sizes varying from 2rd 12rd square yards, abutting on a new road leading from the Nantwich road to the Swinton-road, on a new road leading from the Nantwich-road into Mill street, and north side of the Wistaston new road leading from Oak street to Wistaston. All at Crewe, in the same state in which they are now laid out for building.—Plans of works—particulars and conditions of sale, with plans, may be had (gratis) on application to Messrs. FISHER & HODGES, Newport, Salop; HENRY HENNE, Esq. 12, Regent-street, London, and Newport, Salop; Messrs. PINNIGER & WILKINSON, 23, John-street, Bedford-row; Messrs. GREGORY & CO. ALFRED HALL, Chief Clerk.

LOWER CLAPTON.—Valuable FREEHOLD and COPYHOLD PROPERTY, including about 11 acres of freehold important Building Land, all free from Land Tax, and Tithe Rent-charge.

MESSRS. NORTON, HOGGART, & TRIST have received instructions from the Trustees under the will of the late Skinner Turner, esq. to offer FOR SALE, at the MART, on WEDNESDAY, MARCH 23rd, at TWELVE, in six lots, the following valuable PROPERTY, viz.:—A capital and substantial detached Family Mansion, pleasantly situate at Lower Clapton, fronting the High London-road (for many years in the occupation of the late owner), containing eight bed-chambers, three dressing room, day and night nurseries, lofty and secondary staircases, entrance and inner halls, drawing-room 21 feet 6 inches by 14 feet 6 inches, dining-room 22 feet by 15 feet 6 inches, breakfast-room, convenient domestic offices, three stall stable, two loose boxes, three coach-houses, outbuildings, greenhouse, lawn, flower and kitchen gardens, the whole containing 1 acre 1 rood, with the advantage of an extensive frontage to Back-lane as well as to the high road; a compact Residence adjoining, containing five bed rooms, water closet, parlour and dining, containing five bed rooms, water closet, parlour and dining-rooms, kitchen, convenient offices, lawn, and flower garden, in the occupation of R. Lucas, esq. yearly tenant, at a rent of 35l. 17s. per annum; a Pair of excellent semi-detached Residences adjoining, each containing eight bed chambers, dressing room, water closet, entrance-hall, elegant drawing-room, 32 feet by 15 feet 6 inches, dining-room, 23 feet by 15 feet 6 inches, breakfast-room, convenient domestic offices, stabling, coach house, greenhouse, lawn, flower and kitchen gardens, extending to Back-lane, in the occupation of the Rev. J. Davies and Mr. Bailey, esq. and together of the value of about 300l. per annum. These houses are let for 17 years at ground rents amounting together to 90l. per annum, at the expiration of which term the premises will be entitled to further rentals. A detached Residence adjoining, containing four bed-rooms, drawing and dining room, study, kitchen, and offices, lawn, flower and kitchen gardens, containing 1 rood 7 perches, in the occupation of F. Bellinger, esq. yearly tenant, at 56l. per annum. The whole of the foregoing property is copyhold of the manor of Hackney, but nearly equal in value to freehold, being subject only to a small fine certain. Also the very important and valuable Building Land in the rear, known as the Clapton Orchard Fields, possessing extensive frontages to the two roads, and containing 12 acres 2 roods 18 perches, the greater portion of first-rate, admirably adapted for the erection of residences so much in request in this locality, and presenting a most unusual opportunity for profitable building.—May be viewed by cards only, and particulars and plans shortly had of Messrs. WING & DU CANE, Solicitors, 1, Grays-inn square, W.C.; at the Mart; and of Messrs NORTON, HOGGART, & TRIST, 62, Old Broad-street, Royal Exchange.

HIGHGATE. VALUABLE FREEHOLD BUILDING LAND, containing Nearly Five Acres

MESSRS. NORTON, HOGGART, & TRIST have received instructions to offer FOR SALE, at the MART, on TUESDAY, APRIL 5, at TWELVE, VALUABLE FREEHOLD BUILDING LAND, situate in the parish of Hornsey, close to Highgate, in the county of Middlesex, having a frontage to the high road leading from Highgate to Muswell Hill, of about 300 feet, and 300 feet deep, now in cultivation as a garden ground, but beautifully situate for building.—May be viewed and particulars had at the Gate-house, Highgate Railway Inn, Hornsey; of Messrs. CRAWLEY, ARNOLD, & GREEN, Solicitors, Whitehall-place; at the Mart; and of Messrs NORTON, HOGGART, & TRIST, No. 62, Old Broad-street, Royal Exchange.

SYDENHAM, KENT.

MESSRS. NORTON, HOGGART, & TRIST have received instructions to offer FOR SALE, at the MART, on FRIDAY, APRIL 1, at TWELVE, in Lots, about 2½ acres of very VALUABLE FREEHOLD BUILDING LAND, beautifully situate at Lower Sydenham, within half a mile of two railway stations, having a frontage of 385 feet to an excellent road, and presenting eligible sites for the erection of villa residences.—May be viewed, and particulars had on the Premises; of Messrs. HENRY FREEMAN & CO. Brokers, 3, Crooked-lane, Cannon-street

Important Sale of Timber, near Southend, Essex.—Two Days' Sale.

MR. R. HORNER has received instructions from D. B. SCRATTON, Esq. Solicitor to public auction, on TUESDAY and WEDNESDAY, MARCH 22 and 23, 1864, in convenient lots, the whole of the valuable TIMBER, now felled and lying on Hampton-Barns and Barton-hall farms, in the parish of Great Stambridge, close to water carriage, and within a short distance of Southend Railway station, comprising about 1,200 Elm Timber Trees, 500 Ash Timber, 150 Poplar Timber, and Wood Pollards. May be viewed four days prior to the Sale, and Catalogues may be obtained at the principal Inns, and of the Auctioneer, 1, Cambridge-terrace, Southend, Essex. Sale to commence each day at TEN o'clock punctually.

REPOSITORY, BARBICAN.—RAILWAY HORSES, &c.

MR. J. GOWER is instructed by Mr. Jos. Fairbank to SELL by AUCTION, on TUESDAY next, MARCH 15th, ELEVEN powerful HORSES, that have been carting flasks and working on the South London Railway. Also a bay chaise mare, been used by the General Manager, and a portion of the contract being complete.—On view two days prior.

SALE of TIMBER.—14, Bermondsey New Road

THOMAS ROBERTS & CO, will SELL by AUCTION, on WEDNESDAY, MARCH 16th, and following WEDNESDAY, at ELEVEN o'clock each day the FIFTH and LAST portions of the STOCK of Messrs. ROBERT WARD & SON, sold in consequence of their removal to Greaves's road, Pimlico, and will consist of dry Honduras and Spanish mahogany, dry wainscot, English oak planks, elm, ash, dry teak, black and planters, prime dry limetree boards, chestnut, lime, and ash scantlings, dry poplar planks, ash fellies, oak spokes, oak and teak stocks, and all unsawed logs from Honduras and Spain. To be sold in the Timber Reserve. May be viewed on day prior and morning of sale. Catalogues had upon the Premises, and of the Auctioneers, No. 9, Billiter-street, E.C.

PIMLICO.—To BUILDERS, CARPENTERS, SMITHS, and OTHERS. Clearance Sale of BUILDER'S STOCK, in Pretence being left

MR. GEO. GOULDSMITH will SELL by AUCTION, on the PREMISES, Gillingham-street, near Eccleston-place, on TUESDAY MARCH 15th, at ONE o'clock precisely, a quantity of well-seasoned MAHOGANY, Yellow Deals, and prepared floor Boards, cabinets of Smith's shop, powerful punching machine, lathe, anvils, &c. hydraulic press, eight handsome fluted columns and caps, 12-foot high; a open-fronted counter, powerful horse gear and saw bench, very handsome clear mahogany counter, five other carthorses and a bay mare, four-wheel Clarence cab, wheels, fire-wood, and a quantity of useful materials of Builder's trade. Also a few lots of Household Furniture.—On view the day preceding and morning of sale. Catalogues on the Premises, and at the Auctioneer's Offices, No 6, Pont street, Belgrave-gate, and 74, Belgrave road, Pimlico, S.W.

TO PIANOFORTE AND CABINET-MAKERS, BUILDERS, CARPENTERS, TIMBER DEALERS, AND OTHERS.

MESSRS. NEW ZEALAND EXHIBITION, 1865.

The Commissioners appointed by the New Zealand Government hereby give Notice, that an EXHIBITION of RAW MATERIALS, Machinery, Manufactures, and Fine Arts, will be held in the City of Dunedin, Province of Otago, New Zealand, in JANUARY, 1865, when rewards for merit, in the form of honorary certificates, will be given in the several sections, with the exception of Fine Arts for which will be reserved for Exhibitors from the United Kingdom and the Colonies, the Continents of Europe and America.—Copies of the regulations, forms of application for space, and further details may be obtained from the undersigned. By order,
JOHN MORRISON, Agent for the New Zealand Government.
New Zealand Government Agency, 3, Adelaide-place, King William-street, London, February, 1864.

NOTICE.

THE BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72–74, Bishopsgate-street Within, a few doors from the Old Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Register Stoves, and Cooking Utensils, to meet the great public demand; and for the convenient more extensive execution, by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work.

MILLING'S PATENTS.—CHIMNEY TERMINALS.—THROAT VALVES.—NOTICE to ARCHITECTS.—The Proprietors of these PATENTS have given the Widow Milling an interest in the same, and have considerably reduced the prices of the Articles, trusting that by so doing these useful Inventions will be introduced more generally in all new buildings.—For prices, &c., apply to the Manager, Mr. TYLER, 12, Abingdon-street, Westminster, who will also afford any information, he having been for many years connected with the late Mr. MILLING, in the practical curing of Smoky Chimneys.

NOTICE.

MR. LUDWIG DENICKE, of Leipsig, has been appointed AGENT to receive Advertisements, and to supply “The BUILDER” in GERMANY AND EASTERN EUROPE.

JUNIOR ATHENÆUM CLUB.

Noblemen, Gentlemen, Members of the Universities, Associates of the Learned Societies, Artists, and Patrons of Art, and others desirous of becoming MEMBERS of the Junior Athenæum, are requested to communicate with GEORGE R. WRIGHT, Esq. F.S.A. Secretary, from whom a list of the Committee and other particulars may be obtained.
Committee-room, St. James's Hall, Regent-street, W.

COMPETITIONS.

TOWN and BOROUGH of ROCHDALE.

TOWN HALL &c.—*To* ARCHITECTS.—The Corporation of Rochdale are desirous of receiving DESIGNS for a TOWN HALL, wherein are to be provided fit and convenient public offices, for holding the meetings and transacting the business of the Council, and for holding such public meetings and transacting such public business as the Council may direct or allow to be held therein. The following premiums will be given for such three of the designs as in the opinion of the Council are the highest in merit, viz:—

For the 1st set of such designs, 100*l.*
,, 2nd ditto 60*l.*
,, 3rd ditto 40*l.*

all of which premiated designs are to become the absolute property of the Corporation. The plans, specifications, and estimates must be distinguished by a motto or device, and be accompanied by a sealed envelope containing the name and address of the competitor, bearing a corresponding motto or device to that on the plans, &c. Lithographed plans of the site, with printed statements of the offices, rooms, and conveniences required, may be had on application to the Town Clerk on and after the 5th MARCH next, and the competing Designs, &c. must be delivered at my Office, in Yorkshire-street, Rochdale, on or before the 1st day of MAY next.—By order,
ZACH. MELLOR, Town Clerk.
Rochdale, 27th February, 1864.

TO ARCHITECTS and BUILDERS.

A Premium of 50*l.* will be given for the best and most eligible Plan for LAYING OUT a Flat of 12 of acres BUILDING LAND, situate at Leyton, in Essex, and furnishing Plans and Specifications for the houses.—For particulars, apply to Mr. G. KEATES, 14, Strand, W.C.

CONTRACTS.

WAR DEPARTMENT CONTRACT.

NOTICE to BUILDERS.—TENDERS are required for the supply, at the Verne Fortifications, Portland, and the Nothe Fortifications, Weymouth, of TOOLS, TIMBER, IRON, STEEL, RAILS, CASTINGS, and other PLANT, which may from time to time be required for the War Department Works, in the Portland District, from 1st APRIL, 1864, to 31st MARCH, 1865. Parties desiring to Tender for the above must leave their names at this office on or before the 25th day of MARCH, 1864, and pay the sum of 10*s.* 6*d.* for the printed schedule of prices. The Secretary of State for War reserves to himself the right of rejecting the whole or any of the Tenders; and does not bind himself to accept one Tender for both places.

C. H. NUGENT, Captain and Major,
Commanding Royal Engineers.
Royal Engineer Office, Weymouth, March 14, 1864.

TO BUILDERS and CONTRACTORS.

Persons desirous of TENDERING for the execution of the various Works required in the ERECTION of the proposed new WESLEYAN CHAPEL, at Leighton Buzzard, Bedfordshire, are requested forward their names to us on or before WEDNESDAY, the 23rd inst. Drawings and specification may be seen previously to the delivery of Tenders, of which due notice will be given to the applicants.

BELLAMY & HARDY, Architects and surveyors.
Lincoln, March 4th, 1864.

THE RUNCORN PUBLIC HALL COMPANY, Limited.

To Builders, Contractors, and Others.—TENDERS are required for the ERECTION of a PUBLIC HALL in Church-street, in Runcorn, in the County of Chester. The plans and specifications may be seen on application at my Office, near the Public Offices in Runcorn, aforesaid. Sealed and addressed Tenders must be delivered at my said Office on or before THURSDAY, the 31st day of MARCH instant. The Tenders to be as follow:—

1st. With the front Portion, as shown on the Plan.
2nd. With that Portion omitted, as coloured on the Plan, and scored through in the Specifications with red ink.

The Directors will not bind themselves to accept the lowest or any other Tenders.—By order,
JOHN H. CHORLTON,
1st March, 1864. Law Clerk to the said Company.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of NEW PREMISES for the London and County Bank, Ashover, Houses, can inspect the plans and specifications at the London and County Bank, Ashover, or at the Offices of the Architect, Mr. FRED CHANCELLOR, Painters' Hall, Old Broad-street, London, after the 14th of MARCH. Tenders to be delivered to the Architect before TWELVE o'clock a.m. on the 28th of MARCH. The lowest or any Tender will not necessarily be accepted.

SOUTHPORT HOTEL COMPANY (Limited).

—Parties desirous of CONTRACTING for the WORKS necessary for the ERECTION of the HOTEL, may obtain the quantities at the Office of Mr. A. D. CUPPLEY, Architect, 34, Princes-street, Manchester, upon the payment of Two Guineas, which sum will be returned to the competitors not engaged upon the opening of the Tenders. The drawings will be ready for inspection on and after the 21st of MARCH. Sealed Tenders to be addressed to the Directors, care of W. SALE, Jun. Esq. Secretary, Messrs. SALE, WORTHINGTON, SHIPMAN, & SEDDON, Solicitors, Booth-street, Manchester, on or before APRIL the 21st.—The lowest or any Tender will not necessarily be accepted.

CONTRACTS.

KESWICK LOCAL BOARD of HEALTH.

SEWERAGE WORKS.—To EARTHENWARE PIPE MANUFACTURERS, CONTRACTORS, and OTHERS.—The Local Board of Health for the District of Keswick, in the County of Cumberland, do hereby give notice, that they are prepared to receive TENDERS from parties willing to undertake the following Contract:—Contract No. 1.—For PROVIDING MATERIALS and CONSTRUCTING EARTHENWARE PIPE SEWERS, Manholes, Gullies, Overflows, and other Works. Plans, sections, detail drawings, and specifications of the required works, may be seen, and duplicate forms of Tender, bills of quantities, and schedules for prices, may be obtained on and after THURSDAY, the 10th day of MARCH next, on payment of 10*s.* on application at the Office of ROBERT BROATCH, Solicitor, Keswick (Clerk to the Local Board), or at the Office of JOHN LAWSON, Civil Engineer, 34, Parliament-street, Westminster. Sealed Tenders, endorsed, “Tender for Sewerage Works,” must be forwarded to the Clerk to the Local Board, on or before THURSDAY, the 31st day of MARCH next. The Local Board do not bind themselves to accept the lowest or any Tender.

ROBERT BROATCH, Clerk to the Local Board.
Keswick, 29th February, 1864.

HEXHAM LOCAL BOARD of HEALTH

WATERWORKS and SEWERAGE.—To IRON FOUNDERS, BRASS-FOUNDERS, EARTHENWARE PIPE MANUFACTURERS, CONTRACTORS, and OTHERS.—The Local Board of Health for the District of Hexham, in the County of Northumberland, do hereby give Notice that they are prepared to receive TENDERS from parties willing to undertake any of the following CONTRACTS, namely:—

WATERWORKS.

Contract A, for supplying Cast Iron Water-pipes and other Castings.
Contract B, for supplying Sluice Valves, Hydrants, and other street fittings.
Contract C, for laying and jointing Cast iron Water-pipes and fixing Sluice Valves, Hydrants, and other street fittings.

Sealed Tenders, endorsed “Tender for Waterworks or Sewerage,” must be forwarded to the Clerk to the Local Board on or before WEDNESDAY, the 30th day of MARCH next. The Local Board do not bind themselves to accept the lowest or any Tender.

ISAAC BATY, Clerk to the Local Board.
Hexham, 24th February, 1864.

THE AYLESBURY MARKET COMPANY.

—The Directors are desirous of receiving TENDERS from Builders willing to CONTRACT for the ERECTION of the intended NEW CORN EXCHANGE and COVERED MARKETS, on the site of the WHITE HART Hotel and grounds, in the town of Aylesbury, according to plans and specifications, which may be seen at Aylesbury, on and after the 18th of APRIL next. Persons willing to submit Tenders for the same are requested to send their names to D. BRANDON, Esq. the Architect of the Company, No. 21, Bedford-square, London, on or before the 21st instant. The day for receiving tenders will hereafter be fixed. The Directors do not pledge themselves to accept the lowest or any Tender.—By order of the Directors,

E. R. BAYNES,
JOSEPH PARROTT, } Secretaries to the Company.
Aylesbury, March 9, 1864.

COUNTY of DOWN, IRELAND.

NOTICE to BUILDERS.—Builders are invited to TENDER for the ERECTION of a LUNATIC ASYLUM, near Downpatrick, in the county of Down, according to the plans and specifications which can be seen at the Office of the Architect, HENRY SMYTH, Court-house, Downpatrick, until the 26th inst. Builders who intend to Tender are requested to signify their intention by letter, addressed to the Architect, and to attend at Downpatrick, at TWELVE o'clock, on the 26th inst. to elect a Surveyor on their part to take out the quantities. Builders who cannot attend may enclose their votes, endorsed “Vote for Surveyor,” which will be opened at TWELVE o'clock. The Tenders to be lodged with R. M. ARDAGH, Esq. Office of Control, Lunatic Asylums, Dublin Castle, endorsed “Tender for County Down Asylum,” on or before ONE o'clock, on the 23rd of APRIL next. The work to be commenced immediately after the acceptance of the Tender. Security will be required for the due performance of the contract. The lowest or any Tender will not necessarily be accepted.

Office of Control, Dublin Castle, March 4, 1864.

TO SEWERAGE CONTRACTORS and others.—TOWNSHIP OF TRANMERE, CHESHIRE.—The Local Board for the District of Tranmere are prepared to receive TENDERS for the CONSTRUCTION of about 2,200 yards of MAIN BRICK SEWERS, and about 700 yards of PIPE SEWERS, with the necessary Junctions, Branches, Manholes, Gullies, and Ventilating Shafts. Plans, sections, and specifications, &c. may be seen on application to Mr. W. A. RICHARDSON, C.E. Surveyor to the Local Board, on and after TUESDAY next, the 22nd instant, and copies of the Specifications and Form of Tender may be obtained on payment of 5*s.* Sealed Tenders, in the form to be supplied, to be addressed to me, and left at my office not later than THURSDAY, the 31st APRIL next. The Local Board do not bind themselves to accept the lowest or any Tender.—By order,

GEORGE LLOYD Law Clerk to the Local Board.
Public Offices, Holt Hill, Tranmere, March 14, 1864.

TO BUILDING MATERIAL DEALERS.

TO BE SOLD by PRIVATE TENDER, the MATERIALS of FIVE HOUSES in Great Winchester-street.—For conditions, &c. apply to Mr. GEO. NEWMAN, Auctioneer, 26, Great Winchester-street, Broad-street, E.C.

[*For remainder of Contracts see next Page.*

CONTRACTS.

TO BUILDERS and CONTRACTORS.—Persons wishing to TENDER for the ERECTION of THREE SHOPS, as ON Dwellings and Premises, to be built at Cheltenham-hill, Hampstead, can view the Plans and Specifications at the Office of the Architect, Mr. B. A. PUPE, on and after the 21st inst., and Tenders must be sent, addressed to the Architect on or before the 28th MARCH. The lowest or any Tender will not necessarily be accepted.

STAUNTON COMMON DRAINAGE.—To CONTRACTORS.—The Drainage Commissioners for the Parish of Staunton Common are prepared to receive TENDERS for SEWER FITTING, WIDENING, and DEEPENING of LATTON BROOK and LAKE. Plans, sections, and specifications may be seen at the Office of Mr. T. CUBLEY, C.E., Hereford, between the hours of 10 and 4 o'clock, or at the Inclosure Office, Hereford. Sealed Tenders to be sent to the undersigned on or before TEN o'clock on SATURDAY, the 26th of APRIL next. Printed quantities and Forms of Tender will be supplied by Mr. CUBLEY.

15, Bridge-street, Hereford. J. P. SAUNDERS, Clerk to the Commissioners.

TOWN of TUNBRIDGE WELLS.—CONTRACT for ROAD MATERIALS.—The Paving Committee appointed by the Tunbridge Wells Improvement Commissioners hereby give notice, that they will be ready at their next meeting, to be held at the Town Hall, Tunbridge Wells, on SATURDAY, the 2nd day of APRIL next, at TEN o'clock in the forenoon precisely to receive TENDERS for the SUPPLY of the full wagon ROAD MATERIALS, to be delivered at such places within the said district, in such quantities, and at such times, within the period of twelve months from the date of contract, as may be required from time to time by the Surveyor, Gravelly Ground, Broken Or Flints, Screened Gravel, Screened Shingle, Screened Ragstone, Sea-coal, Boundary Stone, Unbroken Sussex-rock Stone, Kibt Bullers, or any other Stone, Unbroken Sussex-rock Stone, Kibt Bullers, or any other kind or description not enumerated in the three preceding. Tenders (with hard or sawn) are not admitted if the prices for each of the above materials respectively be the same per ton for delivery at the Railway Wharf in the district as the price for delivery at any of the Stone Tunbridge Wells and the price for delivery at any of the Stone Depôts in the district, are to be sent, under cover (free of expense), addressed to the Surveyor at his residence, to enter not later than FRIDAY, endorsed "Tender for Road Materials," to one of the Clerks to the Commissioners, for the due performance of the contract. The sufficient sureties, for the due performance of the contract. The form of contract may be seen at the office of Mr. WILLIAM HENRY WRIGHT, Land Surveyor, Town Hall, and where further particulars may be obtained by order.

JOHN ELLIOTT, Clerk to the Town Commissioners.
Town Hall, Tunbridge Wells, 14th March, 1864.

TO GASHOLDER MAKERS and OTHERS.—The Directors of the Kidderminster Gas Company are prepared to receive PLANS and SPECIFICATIONS, and TENDERS, for the ERECTION of a GASHOLDER, 60 feet in diameter by 20 feet in depth, of wrought-iron plates, the inner Column Girders, 10 inch Joist and 12-inch Outer Lights, Master Bar and Support Outer Balance and Guide Bars, with pressure Columns, and all necessary large to encourage hereafter. Tenders to be delivered under cover to Mr. HENRY EVERETT, Manager, on or before the 2nd day of APRIL next. The Directors do not pledge themselves to accept the lowest Tender.

TO BUILDERS and CONTRACTORS.—The Directors of the Kidderminster Gas Company are desirous of receiving TENDERS for the several WORKS required to be done in the BUILDINGS of a TANK, 4 inches deep, to contain 1,000,000 gallons, depending on the nature of the soil. Plans may be obtained, at the Office of Mr. JOHN GEORGE BLAND, Architect, Unity buildings, few Inserest, from 10 till 4 o'clock. Tenders are to be delivered in the same office before TEN o'clock on the 2nd day of APRIL next. The Directors do not pledge themselves to accept the lowest Tender.

SEAFORD, near NEWHAVEN, SUSSEX. TO BRICKMAKERS.—Persons desirous of TENDERING for OPENING A BRICKFIELD, immediately, in the above place, to which Railroad from Newhaven is Uncommonly Near, can learn the particulars by applying to Messrs. WM. and HABERSHON & PITE, Architects, 5, Bedford-square, London, W.C.

TO BUILDERS.—The Committee for carrying out the Church Enlargement of St. Cuthbert's Church, Bedford, invite TENDERS for the EXECUTION of the WORKS according to the plans and specifications prepared by Mr. JOSEPH MANSON, Parish Clerk, No. 96, The Grove, St. Cuthbert's, from MARCH 21st, to APRIL 2nd, inclusive. Any further information may be obtained on application to Mr. PENROSE, Chapter House, St. Paul's Churchyard, London. Tenders, sealed and endorsed "Tender for the Enlargement of St. Cuthbert's Church," to be sent to the Parish CLERK'S HOUSE, Bedford, St. Cuthbert's, Bedford, by TWELVE o'clock at noon on MONDAY, APRIL 4. The Committee will not necessarily accept the lowest or any Tender. The materials will be required to find a part of the due execution of the works.

Bedford, March 10, 1864.

TO CONTRACTORS and OTHERS.—The Board of Works for the Wandsworth District are desirous of receiving TENDERS for the CONSTRUCTION of the following SEWERS, to the extent of 2,420 feet of Circular, viz. about 2,420 feet of 3 ft. 3 in by 2 ft. 3 in., and 500 feet of 3 ft. by 2 ft.—one brick; and also for the LAYING of about 3,000 feet of STONEWARE PIPE SEWERS of various sizes. The specifications, plans, and forms may be seen, and all further information obtained, at the Office of Mr. C. W. JOHNSON, Surveyor, Mr. Office, Lockhaven Chapel, in between the hours of 10 and 4 o'clock. Tenders are to be sealed, and delivered at the Board as below, on or after TUESDAY, the 29th of APRIL next, and are to be endorsed "Tender for Circular Sewer," "Tender for Inverted Sewer," or "Tender for Pipe Sewers," as the case may be. Tenders must be sent in before the Board on WEDNESDAY the 6th of APRIL next, at Four o'clock p.m. when they are to be opened publicly and declared for the due performance of the contract. The Board do not pledge themselves to accept any Tender.—By order of the Board of Works for the Wandsworth District.

ARTHUR ALEX CORSELLIS, Clerk to the Board.
Battersea-rise, Wandsworth, S.W. 12th March, 1864.

SAINT PANCRAS, MIDDLESEX.—To MASONS, PAVIORS, and OTHERS.—Notice is hereby given, that the Highways, Sewers, and Public Works Committee of the Vestry of the parish of St. Pancras, intend at the public office of the Department of Works, on MONDAY, the 21st day of MARCH, at SIX o'clock in the evening precisely, to receive TENDERS from persons for the EXECUTION of MASONS' and PAVIORS' WORKS to the Footways, Carriageways, and Roadways of the said parish, during the term of twelve months from the said date, at the option of the Department of Works. Conditions will be required for the performance of the works, and Forms of Tender may be obtained at the Office of Mr. WILLIAM BOOTH SCOTT, C.E. Chief Surveyor, as under:—The Vestry do not pledge themselves to accept the lowest or any Tender. No Tender will be received unless made out on one of the printed forms. Tenders must be delivered by SIX o'clock precisely on the said MONDAY, the 21st MARCH.—By order, CHARLES WORRELL, Chief Clerk of the Department of Works.

19, Edward-street, Hampstead-road, March, 1864.

TO LIGHTERMEN, CONTRACTORS, and OTHERS.—The Directors of the Phœnix Gas Company are prepared to receive TENDERS for the LIGHTERAGE of their COALS for a period of Seven Years, in accordance with a specification and Contract to be seen at their Offices, 6, Bankside, S.E. Proposals to be sent before TWELVE o'clock noon, MARCH 29, and read "Tenders for Lighterage," to the Company's Secretary, at their Offices, No. Bankside, Southwark, S.E.

March, 15th, 1864.

EASTBOURNE LOCAL BOARD.—To DRAINAGE CONTRACTORS and OTHERS.—The above Board is to give notice that they are prepared to receive TENDERS from parties who may be willing to CONTRACT for the CONSTRUCTION of about 2½ Miles in length, or thereabouts, of 4 feet, and 2 feet 9 inches by 2 feet 6 inches, and 2 feet by 2 feet BRICK SEWERS, and other works in connexion therewith, including about 400 feet of 3-feet CAST IRON SOCKET-PIPE for Outfall, in the parish of Eastbourne and Willingdon, in the county of Sussex.—Plans, sections, general conditions, and specifications, together with the form of Tender, may be inspected, and other particulars obtained on application to Mr. GEORGE A. WALLIS, Surveyor of the Board, at his Office, Seaside-road, Eastbourne, between the hours of TEN a.m. and FOUR p.m. from 21st MARCH until APRIL. The Tenders, endorsed "Tenders for Drainage Works," are to be addressed to the Surveyor of the Board, and must be delivered at his Office before FOUR o'clock on the said 2nd day of APRIL, and as no Tender will be received after that hour. The Local Board do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two approved sureties to the amount of half the contract for the due and satisfactory performance of the works, and the contractor to pay the cost of such bond.

GEORGE A. WALLIS, Surveyor of the Board.
Dated Seaside-road, March 15, 1864.

WORKHOUSE ACCOMMODATION WANTED. The GUARDIANS of the WEST LONDON UNION are desirous of RECEIVING PROPOSALS from Parochial or Union Authorities for the MAINTENANCE, Care and Clothing, for a limited period, of the WORKHOUSE INMATES, the present number of whom is 414, and are of both sexes. The Guardians are open to receive proposals for the hire of the same for the whole of the inmates. The Guardians are also open to receive from the owners of any building, which may be without difficulty be converted into a temporary workhouse, proposals for the hire of the same for a limited period. It is desired that the accommodation required should be within a few miles of Hyde-park Corner.—Terms and particulars to be sent without delay to Mr. JOHN PONTIFEX, Clerk to the Guardians, 5, St. Andrew's-court, Holborn, London.

TO BUILDERS.—Persons desirous of CONTRACTING for the REPAIR and ENLARGEMENT of BEADWELL RECTORY, near Yarmouth, Norfolk, may see the plans and specification by application to the Rev. JOHN WALKER, Beadwell, on and after MONDAY, MARCH 22nd. Tenders to be delivered at the Office of the Architect, EWAN CHRISTIAN, 8a, Whitehall-place, London, on or before APRIL 5th. Mr. WALKER does not bind himself to accept the lowest Tender, and good and sufficient security will be required for the due performance of the work.

FURNESS and MIDLAND RAILWAY.—CONTRACT for WORKS.—The Directors of The Furness and Midland Railway Company are prepared to receive TENDERS for the CONSTRUCTION of a DOUBLE LINE of RAILWAY, with Approaches, Stations, and Conveniences from the Furness Railway, at Carnforth, to the North-Western (Midland) Railway, at Wennington, being a length of 9¼ miles, or thereabouts. The drawings of the proposed works may be seen on and after the 21st day of MARCH, at the Office of the Company's Engineers, Messrs. MACLEAN & STILLMAN, 24, Great George-street, Westminster, S.W. and Mr. J. S. CROSSLEY, Midland Railway, Derby; and at the Secretary's Office, Furness Railway, Barrow, in Furness. Contractors who wish to Tender may obtain lithographed copies of the drawings, bills of quantities, specification, and forms of Tender, on application to the Engineers, or at the Secretary's Office, on pay ment of 5l 5s. Tenders must be addressed to the Secretary, 9, Old Burlington street, London, W. on or before the 1st day of APRIL next. The Directors do not bind themselves to accept the lowest or any Tender.

JAMES RAMSDEN, Secretary.
Barrow, in Furness, February, 1864.

BARNSLEY LOCAL BOARD of HEALTH.—WATER WORKS DEPARTMENT.—CONTRACT No. 3.—To CONTRACTORS for RESERVOIRS, &c.—The Barnsley Local Board of Health are prepared to receive TENDERS for the formation of a large STORAGE RESERVOIR (of about 65 acres area) to be situated near Ingbirchworth, about two miles from the Penistone Station on the Manchester, Sheffield, and Lincolnshire Railway, in the West Riding of the county of York, together with Waste Weir, Tower, Heads, Filter Beds, and other constructions. Drawings and specifications may be inspected at the Office of Mr. RICHARDSON, Surveyor of the Local Board, St. Mary's-place, in Barnsley; and at the Office of Mr. HAWKSLEY, Civil Engineer, 30, Great George-street, Westminster, on and after the 21st day of MARCH instant, where also bills of quantities and other particulars may be obtained, on payment of two guineas for the same. Tenders must be delivered at my Office on or before TUESDAY, the 5th day of APRIL next, but the Local Board do not pledge themselves to accept the lowest or any Tender.

By order, GEORGE PEACOCK, Clerk to the Local Board.
Barnsley, 4th March 1864.

CHELTENHAM CEMETERY.—To ROADMAKERS and OTHERS.—Notice is hereby given, that the Cheltenham Burial Board intend to enter into a CONTRACT for MAKING the ROADS, FOOTPATHS, and FORMING the GROUND at the CHELTENHAM CEMETERY, according to the specification and drawings, forms of Tender, &c. which may be seen at the Office of the Architect and Surveyor, Mr. W. H. KNIGHT, the Old Farm, St. George's place, Cheltenham. The work to be completed on or before the 1st day of JULY next.—Proposals or Tenders to be delivered to Mr. C. E. WILLIAMS, Clerk to the Burial Board, on or before SATURDAY, the 26th day of MARCH instant, at the Office of the Burial Board, Cheltenham, known as the Public Offices, between the hours of TEN a.m. and FOUR p.m. endorsed "Tender for making Roads, &c. at the Cheltenham Cemetery," and such Tenders to contain the names, residences, and description of two sureties for the due execution of the Contract. The Board will not be considered pledged to accept the lowest or any Tender.

GEORGE EDMUND B WILLIAMS,
Clerk to the Cheltenham Burial Board.
Dated this 8th day of March, 1864.

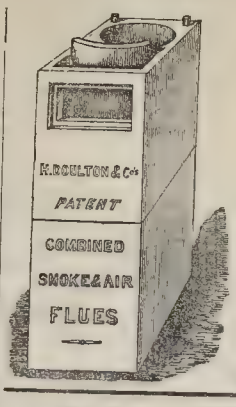
MONTGOMERY COUNTY WORKS.—NEW WING, &c. at Celle, Pentonville System.—The Visiting Justices are prepared to receive TENDERS for the above. The plans, specifications, and conditions may be inspected at the County Surveyor's Office, Kerry, Montgomeryshire, and at the Gaol, on and after the 7th day of MARCH next. Tenders, sealed and endorsed "Tender for Erection of the Visiting Justices, County Gaol, Montgomery," to be delivered in or before the 31st day of MARCH next. The lowest or any Tender will not necessarily be accepted. Two Sureties for the due performance of the works will be required, whose names must be submitted with the Tender. Quantities supplied.

ST. PETER'S WHARF, WESTMINSTER.—TO LET on LEASE. A Committee of the Governors of the Westminster Hospital, in Tothill Fields, Westminster, on MONDAY, the 4th day of APRIL next, at TWELVE o'clock at noon, to receive TENDERS from parties willing to TAKE on LEASE for twenty-one years from Midsummer next, all that WHARF and PREMISES, known as SAINT PETER'S WHARF, situate in MILLBANK STREET, Westminster, at the corner of the Abbey-road, and now in the occupation of Mr. Helmore.—A plan of the Premises, and the terms for letting, and the duties of the agreement and Lease, may be seen at the Office of Messrs. KEMPSON & ROLLOPP, Architects, 3, Abingdon-street, and the plan and terms for letting, at the Office of Mr. W. R. GELDER, Surveyor, to the Hospital, Parliament-street, Westminster, of either of whom Parties desirous of becoming Tenders may obtain further information.

BLACKFRIARS BRIDGE.—Notice is hereby given, that the Bridge House Estate Committee will meet at Guildhall, London, on WEDNESDAY, the 23rd APRIL next, to receive TENDERS for TAKING DOWN and REMOVING the present BRIDGE at Blackfriars, and ERECTING a NEW BRIDGE in its stead. Plans, sections, and specifications of the new bridge and separations of the works to be executed, may be seen, and further particulars obtained, upon application at the Office of the Engineer, JOSEPH CUBITT, Esq. No. 57, Great George-street, Westminster, on and after MONDAY, the 21st MARCH instant. The Tenders must be sealed up, addressed to the Bridge House Estate Committee, endorsed "Tender for New Bridge at Blackfriars," and left at the Comptroller's Office, Guildhall, London, before TWELVE o'clock, on FRIDAY the 22nd APRIL next, and the parties tendering will be required to be in attendance at Guildhall on that day, at ONE o'clock precisely. The Committee do not bind themselves to accept the lowest or any Tender that may be sent in.

Guildhall, March 8, 1864. FERDINAND BRANDT, Comptroller.

CONTRACTS.



TO QUARRY PROPRIETORS, CONTRACTORS, GRANITE MERCHANTS, and OTHERS.—TO BE SOLD, in one lot, by PRIVATE TENDER, to be sent in on or before TWELVE o'clock on the 6th of APRIL, 1864, under "The Company's Act, 1852," with the approbation of his Honour the Master of the Rolls (with a view to its immediate winding up), the valuable and important QUARRY GRANTS over the Commons and Waste Lands in Walkhampton, Dartmoor, near Prince Town, in the County of Devon; and also over the several Woods called Dewerstone Wood, Common Wood, and Caddaford and Cadworthy Woods, and a portion of Wigford Down, near Buckley, on the Plymouth and Tavistock Railway; held on lease respectively by the Haytor Granite Company, and in the working of which from 200 to 300 men have been hitherto employed; together with the Manager's House and Seventy Cottages, occupied by the workmen, at Foggintor, at the Dartmoor Quarries; the Company's Wharf, called the North Devon Wharf, in Buckland Monachorum, in the county of Devon; the Smithy, Stables, and Sheds at Dewerstone, and the large Yard at Lairs, near the Iron Bridge over the Catwater, Plymouth, with the Company's Workshops, Smithy, Offices, and other buildings; as also the right of shipping at the harbour of Catwater and at the river Lairs, near Plymouth, in the county of Devon. And also the superior and costly Plant of DERRICKS, GUY CHAINS, RAILWAY WAGGONS, ROLLING STOCK, MACHINERY, UTENSILS, together with the GOODWILL, CONTRACTS, STOCK of GRANITE, and ASSETS, of that important undertaking, the HAYTOR GRANITE COMPANY, which is now in the case of liquidation by the official liquidator appointed by the Court of Chancery, pursuant to an order to wind up the said Company, dated the 7th day of NOVEMBER, 1863, and the business of which Company is now being carried on solely with a view to a sale. Sealed Tenders to be sent in, addressed to R. P. HARDING, Esq., the Official Liquidator, at his Office, 5, Bank buildings, London, EC, on or before TWELVE o'clock on the 4th day of APRIL, 1864. A deposit of 2,000*l.* will be required on the Tender being certified by the Chief Clerk of the Judge to whose Court the winding-up order is attached; and, subject to the approval of the said Judge, a portion of the purchase money will be accepted in approved bills at approved dates, or in shares of any approved Company.—Forms of Tender, Particulars, and conditions of sale, and orders to view, may be obtained of the Official Liquidator, who will give orders to view the property. Particulars and Conditions of Sale may likewise be obtained at the Offices of Messrs. HARRISON, BEAL, & HARRISON, Solicitors, 19, Bedford row, London, W.C.; and at the Offices of Messrs. PALMER & CO. 34, Bedford-row, aforesaid; or at the Company's Works, Lairs, near Plymouth, Devon; and at the Royal Hotel, and the Union Hotel, Plymouth; and at the principal Hotels in Exeter; and at Messrs. GRANT & INNES, Writers to the Court, Princes-street, Edinburgh.

GEORGE WHITING, Chief Clerk.

TO BUILDERS.—The Directors of the BUXTON HOTEL COMPANY (Limited) are prepared to receive TENDERS for the ERECTION of their HOTEL, on a plot of ground adjoining the Railway-stations at Buxton, Derbyshire. The Plans, Specification, and Condition of Contract may be inspected at the Office of the Architect, No. 4, Lancaster-place, Strand, London; or at his Office in Buxton, on and after MONDAY, the 7th instant, between the hours of TEN and FOUR o'clock. The bills of quantities have been prepared by Messrs. WELCH & ATKINSON, of No. 10, Lancaster-place, Strand, and are now ready for delivery, on payment of 3*l.* which sum will be returned to the respective parties after their Tenders have been received. The Tenders are to be in the form provided, and are to be delivered at the Office of the Company, No. 4, Lancaster-place, Strand, London, on WEDNESDAY, the 30th day of MARCH instant, at TWELVE o'clock, sealed and endorsed "Tender for Hotel, Buxton," and addressed to the Secretary. The Directors do not bind themselves to accept the lowest or any Tender; and the party whose Tender may be accepted must, if required so to do, provide two approved sureties for the due performance of the Contract.

HENRY CURREY, Architect.

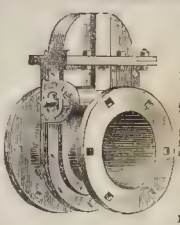
Lancaster-place, Strand, W.C. March, 1864.

HENRY DOULTON & CO.'S

PATENT COMBINED SMOKE AND AIR FLUES.

BY THIS INVENTION PERFECT DRAUGHT AND COMPLETE VENTILATION CAN BE SECURED.

THE air-flue follows the line of the smoke-flue, the passages being quite distinct. The heat from the smoke-flue causes a current, which carries off the vitiated air admitted by junctions near the ceiling. The pipes or blocks are *all made to bond with ordinary brickwork.*



Where the blocks come together, each air-flue has a lip or projection, which enters the next block and completely shuts off the air-flue from the smoke-flue at the joint. This lip, with dowels at the opposite corners of the blocks, also holds the lengths firmly together.

Curves are made to suit any inclination.

Manufactured in Terra Cotta for smoke-flues equal to 12 in. 10 in. and 8 in. diameter, with ventilating-flues of proportionate size.

Small models will be forwarded to architects on application to

Henry Doulton & Co. High-street, Lambeth.

REDUCED PRICES OF

BRYAN DONKIN & CO.'S

IMPROVED GAS VALVES,

With Wrought-iron Pinions.

From 9 in. to 18 in. price 9*s.* 6*d.* to 12*s.* per in. diameter.

List of prices, with full dimensions of all sizes up to 30 in. to be had on application.

These Valves are all proved on both sides to 5*lb.* on the square inch before leaving the works, and are always kept in stock.

Valves made with outside rack to order.

Also Screw Water Valves, with gun-metal faces.

BRYAN DONKIN & CO. ENGINEERS

Near Grange-road, Bermondsey.

CHUBB'S LOCKS, with all the recent Improvements,

STRONG FIRE-PROOF SAFES, CASH AND DEED BOXES.

Complete Lists of Sizes and Prices may be had on Application

CHUBB and SON,

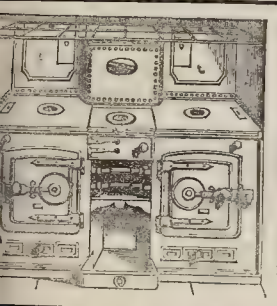
57, ST. PAUL'S CHURCH-YARD, LONDON,

28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

IRON BRIDGE for SALE.—At Plymouth, a WROUGHT IRON BRIDGE, 125 feet long, rail 6 feet high, roadway 12 feet wide, constructed by HUNNET & CO. from designs by the late Mr. Brunel. In tolerable condition, strong, capable of carrying 50 tons. TO BE SOLD, a bargain.—Apply to the DOCK MASTER, Plymouth Great Western Docks, Plymouth.

FIRE-PROOF CONSTRUCTION.—FOX & BARRETT'S PATENT

This improved system of fire-proof construction has been most extensively applied, and its applicability has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private. The material thus ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.



The floors and roofs are formed by a combination of casts of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation for boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are desirous to build, both as superseding the necessity for cast iron girders at 1*l.* per hundred, and as bringing the great desideratum of fire proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,

MR. BARRETT,

12, YORK BUILDINGS, ADELPHI

FENDERS, STOVES, FIRE-IRONS, AND CHIMNEY-PIECES.

Buyers of the above are requested, before finally deciding, to visit

WILLIAM S. BURTON'S SHOW-ROOMS.

They contain such an assortment of FENDERS, STOVES, RANGES, CHIMNEY-PIECES, FIRE-IRONS, and General IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright Stoves, with ormolu ornaments, 3*l.* 16*s.* to 33*l.* 10*s.*; Bronzed Fenders, with standards, 7*s.* to 50*l.*; steel Fenders, 3*l.* 3*s.* to 11*l.*; ditto, with rich ormolu ornaments, from 3*l.* 3*s.* to 18*l.*; Chimney-pieces, from 1*l.* 8*s.* to 100*l.*; Fire-irons, from 2*s.* 3*d.* the set to 4*l.* 4*s.* The Burton and all other Patent Stoves with radiating hearth-plates.

WILLIAM S. BURTON, GENERAL FURNISHING IRONMONGER,

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES,

Sends a Catalogue, gratis, and post-paid. It contains upwards of 500 illustrations of his illimited stock of sterling Silver and Electro-Plate, Nickel Silver, and Britannia Metal Goods, dish-covers, hot-water dishes, stoves, fenders, marble chimney-pieces, kitchen ranges, lamps, gaseliers, tea trays, urns, and kettles, clocks, table cutlery, baths, toilet ware, turnery, iron and brass bedsteads, bedding, bedroom cabinet furniture, &c. with Lists of Prices and Plans of the Twenty large Show-rooms, at

39, OXFORD-STREET, W.; 1, 1A, 2, 3, and 4, NEWMAN-STREET; 4, 5, and 6, PERRY'S-PLACE, and 1, NEWMAN-YARD, LONDON.

ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

APPROVAL OF THE ROYAL VETERINARY COLLEGE.

THE MEDALS OF ENGLAND AND FRANCE,

And the Medals and High Recommendation of the Royal Agricultural Societies of England and Ireland.

SECURED BY EIGHT SEPARATE PATENTS. LATEST, 1863.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, with RACK & WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

THE HALTER BALL, ATTACHED BY A NEW IMPROVEMENT, WORKS NOISELESSLY, AND ALMOST WITHOUT FRICTION.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible,—advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

ILLUSTRATED LISTS ON APPLICATION.——INSPECTION OF SHOW-ROOM REQUESTED.

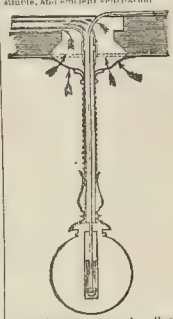
POWIS, JAMES, & CO.

SAW MILL ENGINEERS,

Victoria Works, Blackfriars-road, London

International Exhibition, 1862. Medal awarded for a Collection of First class Machinery for working Wood, being the highest commendation attached to any medal in this class.



OFFICES:

26, WATLING STREET, CITY, E.C

RICKETT'S & HAMMOND'S

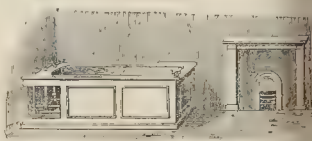
VENTILATING GLOBE LIGHT,

combining an agreeable method of lighting, with convenient simple, and efficient ventilation

The advantages obtained are these —

A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION.

A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR.



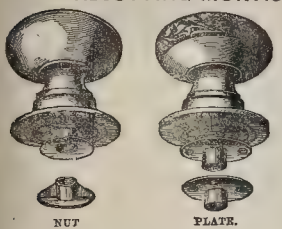
AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.

A GLOBE LIGHT will consume 5 to 7 feet of gas per hour, giving as much light as an ordinary three-light chandelier, with a consumption of 12 feet per hour.

No. 5, CHANDOS STREET, CHARING CROSS, LONDON, W.C.

J. TYLOR & SONS' PATENT BATH

APPARATUS.



The bath and boiler may be fixed in the same or separate rooms anywhere below the level of cold water cistern. Open or close fire pressure. No brickwork setting for boiler required.

Estimates given from architects' drawings, or by inspection of buildings.

Catalogues, containing Nine Illustrations of different methods of heating baths, sent on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate street, London.

SIMPLICITY, UTILITY, ECONOMY, AND DURABILITY.

THOMAS PUGH & CO.'S NEW PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE.

NUT PLATE.

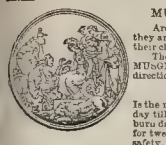
J. B. SCAMMELL & CO. (late Thomas Pugh & Co.)
WHOLESALE IRONMONGERS,
13, KING STREET, SNOW HILL, LONDON.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in Public and Private Buildings, in Her Majesty's Palaces and can put A'dershott—where many hundred sets without one single failure. It is applicable to all Locks and Latches, both Rim and Mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.

New rich Designs in Glass, China, Brass, Bronzed, Gilt, Carved Woods, Inlaid, &c. &c. or to any Design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of Locks, Latches, Brass Foundry, and Ironmongery, required for Buildings, of the best quality manufactured, at the lowest wholesale prices.



*** Illustrations and Particulars sent on application.

WAREHOUSES FOR NAILS, PIPES, GUTTERS, &c. IN ST. JOHN'S COURT.

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

MUSGRAVE'S PATENT STABLE and HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition.

They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London architects, noted for employing only what is the best of its kind.

Musgrave's Patent Slow-combustion Stove

Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours, at a cost of 8d.; and deserving of special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

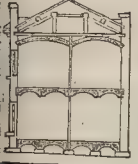
NOTICE TO ARCHITECTS AND THE TRADE.

WEST-END BRANCH, EGYPTIAN HALL, PICCADILLY.

J. DEFRIES & SONS,

GAS ENGINEERS AND MANUFACTURERS OF

CRYSTAL, BRONZED, AND ORMOLU CHANDELIERS, IMPROVED CRYSTAL STAR AND SUN LIGHTS,



For Lighting and Ventilating Public and Private Buildings.

J. D. & SONS beg most respectfully to inform Architects and the Trade, that having been solicited to open a West-end Branch, they have taken the DUDLEY GALLERY, EGYPTIAN HALL, PICCADILLY, and at an enormous outlay they have made it replete with every description of lighting mediums, including REGISTERED DESIGNS of MEDIÆVAL GAS-FITTINGS, CRYSTAL, BRONZED, ORMOLU, and ELECTRO-PLATED Chandeliers, Brackets, Vestibule Lights, Bronzed and Gilt Statuettes.

SPECIAL DESIGNS PREPARED in perfect ACCORDANCE WITH Architectural Arrangements. Estimates furnished FOR THE LIGHTING and Fitting up of Theatres, Music-halls, and Public or Private Buildings with Gas, &c.

The usual trade discount allowed, as at their

MANUFACTORY and CITY SHOW ROOMS, 147, HOUNDSDITCH, CITY.

THE DENNETT ARCH.

Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.

Address to the Patentees,—A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficacy as against fire, I can bear witness to its strength, and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.

"GEO. GILBERT Spring Gardens London."

BY HER MAJESTY'S ROYAL LETTERS PATENT.

WILSON'S DOUBLE-ACTION SCREW SPANNER,

MANUFACTURED BY

JAMES HEELEY & SONS,

Mount-street, Birmingham.

The superiority of this Spanner consists in its novel and rapid mode of adjustment by a double action screw, and its new and convenient arrangement of curved handle and oblique jaws, which, combined with its superior strength and excellent workmanship, render it by far the best and handiest tool of its class hitherto produced. It is being extensively used by Engineers, Manufacturers, Machinists, and Railway and Steamboat Companies, and can be had of all respectable Ironmongers.

MANTEL PIECES, ENGLISH AND FOREIGN,

IN EVERY VARIETY OF DESIGN AND COST,

Have been added to their LARGE and EXCELLENT ASSORTMENT of FINE FINISHED STOVES FENDERS, &c. in the NEW SHOW ROOMS of the

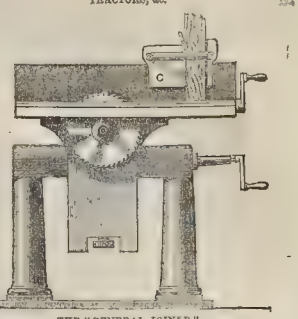
GENERAL IRON FOUNDRY COMPANY (LIMITED),

At No. 43, UPPER THAMES STREET, LONDON.

By an arrangement with Mr. WILLIAM POTTS, of Birmingham, the Company have the exclusive Right of Sale of his ART MANTELS in the London District. These Works are of the HIGHEST EXCELLENCE in DESIGN and FINISH, very beautiful, and durable. They also beg to call special attention to the beautiful and varied productions in ART BRONZES and METAL WORK, adapted for ARCHITECTURAL and CABINET DECORATION, MURAL MONUMENTS, &c. now on view in their Rooms. Also to the following Articles of their Manufacture, viz.

PATENT WROUGHT IRON WINDOWS,

Strong, light, durable, easily fixed, cheap, and free from risk of breakage.



BILLING'S PATENT CHIMNEY THROATS AND AIR APPARATUS.

Most effective for the Cure of Smoky Chimneys.

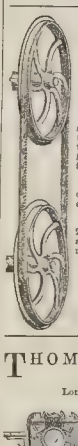
FIRST-CLASS COOKING APPARATUS,

For Club Houses, Hotels, Restaurants, &c.

TO BUILDERS, JOINERS, CONTRACTORS, &c.

THE "GENERAL JOINER."

SAMUEL WORSSAM & CO. having long felt the importance of introducing a LABOUR-SAVING MACHINE, which by combining several operations at a moderate cost, should meet the requirements of builders and others engaged in the conversion of timber, beg to offer for this purpose their "General Joiner" as above, which in its present greatly improved form will, with three men, do the work of at least fifteen skilled joiners, in SAWING, CROSS-CUTTING, and SQUARING, PLANING and THICKNESSING, MORTISING, TENONING, GROOVING, TONGUEING, RABBETTING, BORING, BEADING, MOULDING, CHAMFERING, &c. &c.—For priced illustrated circulars, apply to S. WORSSAM & CO. Saw-Mill Engineers, King's-road, Chelsea (sole manufacturers), where the "General Joiner," and samples of the work may be seen.



CHARLES POWIS & CO.

SAW-MILL ENGINEERS, AND MAKERS OF CONTRACTORS' PLANT.

Cyclops Works, Millwall Pier, London, E.

From the experience of Mr CHARLES POWIS, who was for so many years with Messrs POWIS JAMES, & CO. we are enabled to offer SAW-MILL MACHINERY and CONTRACTORS' PLANT upon very advantageous terms.

AGENTS WANTED. ENGINES ON HIRE.

PERIN'S PATENT

FRENCH BAND SAW BLADES.

SAMUEL WORSSAM & CO. having purchased of M. Perin, of Paris, the sole right to import and sell his BAND SAW BLADES throughout the United Kingdom, beg to announce that they are now in a position to supply these Saws from 1-16th of an inch to 8 inches in width, and up to 50 feet in length.

The vast superiority of Perin's Band Saws over any others in point of finish, toughness, durability, and evenness of temper, is now everywhere admitted.

S. W. & CO. keep a large stock of all sizes up to 2 inches wide, from which they can supply orders to any part of the kingdom within twenty-four hours' notice.

For Price Lists, apply to

ESTABLISHED 1744.

AUSTIN'S IMPERIAL PATENT SASH

and BLIND LINES.
To BUILDERS, CARPENTERS, and BLIND-MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

IRON ROOFING of CORRUGATED IRON,

Wrought Iron, principal Roofs covered with Slates, Iron Bridges, Girders and Railings; also Portable Buildings for Dwellings, Farm Purposes, Churches, Chapels, Schools, Theatres, Concert or Dancing Rooms, &c. suitable to all Climates, fixed complete in Town or country, or packed for exportation.

SMOKY CHIMNEYS. — The

best Cure is the PATENT ALBERT CHIMNEY CAP, 260 on Buckingham Palace, in use also at St. James's Palace, Windsor Castle Government buildings, mansions, halls, club-houses, and buildings in general. Prospectuses on receipt of two postage stamps.

JAMES BARTON,
Iron Works, 370, Oxford-street, W.
N.B. Manufactory for the Patent Stable Fittings and Enamelled Mangers.

SMOKY CHIMNEYS.

S. DEACON

Respectfully invites the attention of Architects Builders, &c. to his

PATENT LOUVRE CHIMNEY CAP,

which has been in use some time with perfect success, many curing chimneys where other caps have been of no avail.

The advantages attending this Cap are—it can be thoroughly cleaned by the machine when the chimney is swept, the brush being able to pass through the Cap without the liability of misplacing it; an increased up current, and the impossibility of a down one.

Prospectus, with testimonials, forwarded on receipt of Postage Stamp, by

S. DEACON,

DESACHY'S FIBROUS PLASTER.
GEORGE JACKSON & SONS,
HAVING BECOME THE PROPRIETORS OF THE PATENT RIGHTS IN
DESACHY'S FIBROUS PLASTER,
Beg to call the attention of Architects to its Capabilities.

It is adapted for the speedy and economical production of any coffered or circular work, waggon-headed ceilings (all bracketing being avoided, as it is fixed to the joists direct), fluted and plain columns, panelled dados, all kinds of diaper, &c., for the linings of walls and ceilings, and for all purposes of ornamental plaster.

The advantages are great. It is of great lightness and of excellent quality; it is not inflammable, and is ready to be painted immediately after it is made; it has been used (under the direction of Owen Jones, esq.) for the ceiling of St. James's Hall; at Messrs. Osler's, Oxford-street; Mr. Hancock's, New Bond-street; the Crystal Palace Bazaar; the Home for the Aged, South Lambeth; and at various other Works.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

THE LAND SECURITIES COMPANY

(Limited)

Capital, £[illegible]

Deposit, £[illegible]

His Grace the Duke of Marlborough, President.

The Directors of the International Financial Society (Limited), Acting as a Finance Committee.

The Builder.

VOL. XXII.—No. 1102.

Some Thoughts on Things Social and Sanitary.

PASSING along the Great Western Railway, large tracts of land, as between Maidenhead and Didcot, for example, are seen to be under water. In North Lancashire, hundreds of fields contiguous to the route of the railway between Preston and the Carnforth Junction are partially covered with water; in some parts acres together are inundated. Much of the coast land between the junction named and Lancaster is flooded very seriously: and a good deal of property between Lancaster and Preston is also submerged. The river Ribble has overflowed its banks in many places. The floods on the Trent have not subsided, the height of the water being only about a foot and a quarter below the water-mark of the great flood of 1857. The fields on both sides of the river are completely inundated, and in some instances the water is 4 feet and 5 feet deep. Several of the farmers around the town have already sustained serious losses by having to keep their cows at home, the water covering all the grazing land on the Trent side. The fields in the neighbourhood of Lenton and Beeston are all under water, and it is only on higher parts that land can be seen: in fact, as far as the naked eye can reach, it looks more like a small sea than earth. The waters of the Clyde have overflowed its banks and lives have been lost.

We have on several occasions directed attention to the defective state of many of our river valleys and adjoining lands, where, on the occurrence of any excess of rain, large areas of the adjoining country are laid under water, to the injury of farming operations and to the deterioration of the health of live stock, sheep, and cattle, and, in the vicinity of cities such as Oxford, to the injury of public health. We have pointed out the fact that main drainage is required, with river embanking, and such continent works as can only be done on a great scale, irrespective of local boundaries and private ownership. There must be permissive Parliamentary powers, which may be locally adopted and put in force after an inquiry and report, as under the powers of the Local Government Act, 1858, and some other analogous public Acts. The pecuniary loss inflicted on landowners is far larger than the amount of rate necessary to pay interest on borrowed money, and to repay the capital in, say, thirty years. The existing condition of many of our rivers is a national disgrace. The question of their improvement, however, is one for Parliament, and not for individuals.

We have heretofore been abused right soundly because we intimated that sanitary arrangements at Liverpool had not been carried to perfection. We are glad, however, to find that members of the Health Committee are making inspections for themselves of the foul places and seats of disease in the crowded courts of that borough. At a recent meeting of the Health Committee, the deaths during the week showing an increase of sixty-one on the corrected average of the last ten years, it was agreed that the time had come for action, and the arrangements in parts of the town were pointed to as "atrocious and dreadful." Mr. Alpass said he had had no idea that there were such places as those in question until he visited them; and his visit had convinced him that it was perfectly impossible for human nature to exist in them in a healthy condition. He urged that the committee would be accessory to murder if they allowed the present state of things to continue, for science showed that death was as certain to be caused by the present condition of the premises mentioned, as if poison were taken. Mr. Whitty expressed his satisfaction with the attitude of the committee upon this question, and trusted the result would be greater support in the council, arising from the advocacy and influence of the members, who had now become sensible of the need for action.

In these pages we have over and over again recorded similar conclusions as the results of personal inspection of the foul places in our cities and towns. It is the duty of every member of a health committee to make such inspections himself on consenting to take office. If this were done under proper guidance, and with the mind properly prepared to draw right inferences from what was seen, we might expect more rapid progress in a right direction than now takes place.

The report of the "Manchester and Salford Baths and Laundries' Company" shows that

"During the past year there had been an increase in the number of bathers of 27,893; in washers, 2,180; in receipts, 252*l.*; and the number of visits paid to the various establishments of the company had been 230,231. This was a proof of the usefulness of the establishments. The total receipts for the year had been 3,910*l.*, against 3,657*l.* in 1862, and the total expenditure had been 3,240*l.*, against 3,257*l.* in 1862. The excess of income over expenditure was 701*l.*, and the amount of the reserve fund was 617*l.* It was recommended that 97*l.* should be taken from the reserve fund and added to the profits of the year, so that a dividend of 2 per cent. might be paid to the shareholders."

Baths and washhouses may, with advantage, be provided for the uses of the poor in all our towns, and even in most villages. These, however, must not be laid out on a grand and expensive scale. Such places ought to be plain, simple, and, above all, economical. They should be situate in the midst of the most dense populations, so that the poor shall not have to carry clothes to wash long distances. The conveniences offered should, in fact, amount in convenience and comfort to something like adding an extra room to each cottage and tenement. Such washhouses are in use in Plymouth, in Wolverhampton, and in some other places. An old room, warehouse, shed, or yard, may be taken (as in the towns named) at a low rent, because the site is not now favourable for trade purposes. In such places fit up rooms and erect boilers, wash-tubs, and drying-closets, and afford means to the poorest to wash, dry, and mangle their clothes at a cost so low that it would be an economy to come from home to do this work. One penny per hour, to include the use of all the conveniences named, will readily be given by the honest poor, and the income will pay under proper superintendence. The committee of management—clergymen and gentlemen in the district—must, of course, if they take part, be unpaid. We fear that the Manchester and Salford Baths & Laundries Company have set up on far two large a scale to be of the greatest benefit to the poor.

Something even more pressing than establishments of this kind is wanted for thousands of the population. Every week shows that the statements we have given of the dreadful condition of many in the lower stratum of London life, so far from being exaggerated, is below the truth. Within the last month society has been startled with accounts of fellow creatures who have actually perished for want of the necessaries of life. Who can tell how many have quietly passed away in the metropolis under the same circumstances, of whom no note has been made. In one case, that of Naomi Norman, aged 63, it appeared from the evidence of one Sarah Russell, that the deceased was a single woman, and occupied part of witness's room, for which she paid 9d. a week rent. Deceased was allowed 1s. a week, and a loaf, and her sister allowed her 8d. a week, so that when the rent was paid there was the sum of 11d. and the parish loaf to keep her during the week. Witness had to work all day long at needlework, and one Sunday, when she came home, she found her fellow-lodger dying. Medical advice was called for, but when the doctor arrived he pronounced her dead. She had never seen Norman in other clothes than those in which she stood. She had to cover herself with these garments as well as she could at night, for there were no blankets or sheets to keep her warm. There were in the room only three old chairs, an old box, a bit of flock-bed, and a dirty ragged quilt. The surgeon said that the immediate cause of death was rupture of the heart, accelerated by privations, want of nourishment, want of clothing and warmth. Again; Charlotte Hampton had seen better days: fell from poor to worse: tried to keep her entire destitution from the knowledge of others, and died starved. Sarah Dove died "from the effects of exhaustion, consequent on continued want of food, clothing, and warmth;" because, under present poor-law arrangements, the Bethnal-green authorities refused to take her into the workhouse without her husband and children.

Scarcely has this been heard of, than lo! another case becomes known. Anne Palmer, 26, is found dying in the street in Spitalfields from exposure and want, and, being taken to the union-house, expires. Dr. E. Richardson, medical officer to the union, says that deceased was extremely emaciated, and the skin was of a peculiar dark colour. There was hardly any blood in the body, and what little there was presented a pale and thin appearance. The cause of death was dropsy and effusion of serum into the pericardium from privation and exposure. There was hardly a trace of fat in the system. We say, as we have before now said, that the extent of the distress verging on starvation which exists in the metropolis is not known to the Government, to Parliament, or to the influential part of the public as a body: much of it the poor-laws as at present administered fail to touch. Attention to this most important subject is loudly called for, and, if not given, the day will come when the inroad of pestilence, or some increase in the price of food will lead to revelations that will startle the community, and bring greater disgrace on this immense and wealthy city.

A searching inquiry is needed, and this inquiry should extend to the condition and culture of the neglected children of London, the main source of supply for the criminal classes.

In a recent admirable article on crime and the existence of a body of criminals amongst us, the *Times* asks for knowledge of the origin of the criminal character, and the natural history of the class.

"How come these persons," says the writer, "to be so base, so abandoned, and so incorrigible? It is taken for granted that the younger convicts are more amenable to a reformatory discipline than the elder. If so, there was a time when they might perhaps have been wholly converted. The dark biography begins with the first conviction. Why not earlier? But these men were not really born into crime. There were years in which nature had some little sway, and good and evil were not always presented in a guise so fatal to the claims of the good. Cannot the chaplains, could not here and there a parish priest of the almost obsolete pastoral type, throw some light on the nursery education of crime? This is the one thing wanting in these endless debates, and perhaps a

little more information on that point might spare much fruitless discussion on the hard and incorrigible maturity of crime."

Undoubtedly it would do so, and if the natural inference from that information were drawn and rightly acted on, the matured criminal class would dwindle to manageable limits. The origin and supply of this class (and few have any correct idea of its extent and separate nature, few can imagine the enormousness of the noisome stratum underlying the visible population of the metropolis),—the origin and supply, we say, are to be looked for in the neglect of unprotected children. There is danger to the country in the increase and agglomeration of a criminal class; and this class, we re-assert, is supplied continuously and systematically from the heaps of neglected children who survive the dangers they are exposed to. It is scarcely too much to say, as a general rule, that children are what we make them; and thousands roam this wealthy and civilized capital who, untaught except in evil, and uncared for, are being fitted for all crimes, and unfitted for aught else.

THE SHEFFIELD RESERVOIR FAILURE.

THE frightful calamity that has fallen on Sheffield is already known to all our readers. The large embankment which has failed held up the Bradfield Reservoir,—a work of considerable magnitude, recently completed to afford an additional supply of water to Sheffield, which has long needed the additional quantity this reservoir was intended to afford. The position of the reservoir is about eight miles to the north-west of Sheffield, and its elevated situation, and large and excellent gathering ground, are admirably adapted for the supply of an important town; it is almost at the head of the Loxley river. The river at this point is shut in between high banks on each side, affording facilities for throwing an embankment across, and thus forming a good natural reservoir in the bed of the river. Another reservoir is being formed on the Agdon Brook, to the north-west of Lower Bradfield, and scarcely a mile from the Bradfield Reservoir. The embankment for this reservoir is, it seems, being formed of like materials and in a similar manner to the Bradfield Reservoir. This county (Yorkshire) appears to enjoy an unenviable notoriety with regard to the failure of such works. It will be in the remembrance of our readers, that the embankment of the Bilberry Reservoir, Holmfirth, failed in a similar manner, in February, 1852,* by which means 100 souls were launched suddenly into eternity "with all their imperfections on their heads." In the present instance, to the latest date, 258 are missing, and 244 are reported found by the police; so probably the deficiency will soon be made up: one body was found down as low as Doncaster.

We need not dwell long on the vast amount of property this untoward accident has destroyed, as that is being fully detailed in the daily press: suffice it to say, that the mighty torrent of pent-up water let loose has cleared away everything that impeded its course,—bridges, mills, cottages, and mill-dams: some of the former were substantially built, particularly Hillsborough Bridge, one arch of which is now standing, but the parapet walls are swept away. With regard to the latter, the sweeping away of dams, in the headlong torrent of the flood, added to the accumulation of the water as it proceeded; which swelling and augmenting in volume, committed such serious depredations between Malin's and Hillsborough Bridges, and lower down on the banks of the Don, and in the streets of Sheffield. Many of the cottages that are carried away were built of the grit stone of the district, and in a manner peculiar to the masons of the locality, with wrought stones at the face and back of the wall, the middle being filled up with rubble, with scarcely any bond stone through the walls, and probably with many of the stones placed on their edges, instead of on their beds. The brick-built cottages appear to have stood very well, and to have resisted the terrible battery of the troubled waters. In one instance we saw the remains of a cottage that had been built of stone, at the west end of the row: the front and part of the end walls were swept away, while the chimney-breast and chimney built of brick remained nearly perfect. We have reason to hope that the extent of the damage done is somewhat exaggerated, both by the local and London press. In a calamity of this extent it is difficult at first view to fairly estimate the amount, or for the human mind to grasp results by the *débris* scattered around them. Suffice it to know, it is probable we shall soon be made aware of the extent of it, as we find that the company is responsible, by their last Act, for all damage occasioned by the failure of embankments, the clause being properly put in soon after the failure of the Holmfirth reservoir. A meeting has been already held by the owners of the property destroyed, and they are stirring themselves with the view of making a combined application to the company for redress and compensation.

The Sheffield Waterworks Company has hitherto been considered as a good security for investment. Their capital is said to be a little over 400,000*l.*, and their 100*l.* shares are worth 145*l.* in the market, but the damages by the flood have been estimated at 500,000*l.* This sad affair will prove very disastrous and ruinous to the company. From Hillsborough down the vale of the Don considerable damage has been done; several bridges are swept away—particularly some of iron, which readily yielded to the pressure and buoyancy of the water, while Lady-bridge and other bridges built of stone maintained their ground, and proved their superiority to withstand sudden irruptions of water arising from heavy rainfall or floods from large gathering grounds in hilly regions. In the Wicker we observed the occupiers of the houses and shops busily engaged in pumping out and emptying their cellars of the water and *débris* brought down by the flood. In this locality it is said the water was some 5 or 6 feet deep, the water being diverted in its course from the Don at Lady-bridge, the arches of which were obstructed by timber, &c., brought down. If the cellars had been connected with the sewers, the water would have quickly passed away as the flood subsided.

Walking over the scene of the calamity, and up the course of the Loxley brook or river to the reservoir, every striking object was observable. The course of the river was originally narrow, winding, and tortuous, studded here and there with mills, and with rows of cottages near its banks at the lower end, and as you arrived near the reservoir houses were less numerous.

At the lower end it now appears like the bed of a capacious river suddenly run dry, and the upper parts are shut in between high and precipitous banks; the whole course of the river is beautiful and picturesque, but the charms of the natural scenery of this romantic valley are now marred by the refuse and wreck of the mills of the indefatigable manufacturers, and the humble homes of their stalwart and industrious artisans.

Arriving within about 3 miles of the dam-head, may be seen, looming in the distance, a dark-looking object, like a small mountain, with a chasm in its midst, stretching across the valley, and reminding one of the disruption of the fair face of the mother earth, in tropical regions, by mighty earthquakes, or the rugged gorges of mountain torrents, whose courses are frequently changed, to afford vent for heavy rain-falls or melting of snow. After a careful inspection of the chasm in the bank, we went up the by-wash to the waste-weir. This is 12 feet wide, with side walls 3 feet high. The bottom is curvilinear, the centre being about 6 inches lower than the sides. It is connected with the reservoir at the south end of the embankment and the south-east corner of the reservoir. It is about 1 foot below top water of the reservoir. The by-wash just below its junction has several steps of about 3 feet each, and toward the mouth there is a circular curb some 4 feet high: this was the part they tried to blow up with gunpowder when they found the bank failing, so as to lower the head of the water and necessarily the hydraulic pressure. There are two drill-holes now visible in this curb. This by-wash is well constructed of solid grit masonry; but the end next the river is many feet above the bed of the stream, the bed, I suppose, having been cut deeper by the scour of the water that escaped from the reservoir. Below the waste-weir, the bank and pitching together had sunk considerably, showing a defect and settlement there. It occurs to us that at this point something was wanting. Sluices would have been useful that could have been easily drawn, so as to have lowered the level of the water in the reservoir, if it had accumulated too rapidly after heavy rain-fall over so large a gathering-ground, or from the sudden melting of deep snow.

The reservoir is about 78 acres in extent, and is said to contain 114,000,000 cubic feet of water. The embankment across the valley at the east end of the reservoir is about 400 yards long, and its altitude in the deepest part about 90 feet. The embankment is said to contain 400,000 cube yards of earth. The width of the embankment at top is 12 feet, with inner slope apparently of 25°, presumably intended to be 2 to 1, and outer slope 30°, presumed to be intended for 1¾ to 1. The face of the slope of the embankment from the surface of the water that remains in the reservoir appears to be solid earth for about 40 feet, rough rubble-stone loosely placed on about 56 feet, and the top part about 76 feet, pitched by hand, and from about 1 foot to 1 foot 6 inches thick. These dimensions are taken of the inner side of the embankment from the base to the apex. There does not appear to be any puddle-lining underneath the pitching, on the face of the inner side of the embankment.

As to the embankment itself, the chasm is not quite in the centre, and is about 300 feet long at the top, gradually narrowing and tapering down. The bank has also sunk from its long sectional level on each side of the chasm some 150 feet or more, probably from the effects of the bursting away of the middle part of the embankment, or from the settlement (sinking) of the loose material of which the upper part of the embankment seems to be composed. There is a puddle-wall in the centre of the embankment, said to be 17 feet at base, and tapering gradually up to 5 or 6 feet thick at top. The material of which it is composed appears to be a darkish or bluish-coloured clay, but its exact quality could not be fully scrutinized, and it appeared mixed up and discoloured by the falling earth.

The appearance of the puddle is not very satisfactory. Near the centre and at the base of the embankment, are fixed two 18-inch iron discharge or supply pipes, surrounded on three sides by walls of masonry; but we did not observe any apparatus for opening or closing the valves,—indeed, nothing but the masonry: perhaps the apparatus was washed away by the overwhelming and irresistible torrent. Looking at this embankment in section, the lower part or base of the embankment for about 20 or 30 feet appeared to be composed of good solid earth, as far as could be seen; but above that, the material of which it is composed looks loose and friable, with large quantities of loose stones in it: in fact, if you look at the course of the river some distance below the dam-head, it is covered with loose stones of a similar character to those that appear now in the embankment. Indeed, they appear to be forming the Ogden embankment in a similar way. It seems to us almost impossible to form a solid embankment with such materials, particularly a dam head to a reservoir. If such material were used to form a railway embankment of that depth (90 feet), it would take some four or five years or more to become consolidated, the bank would continue to sink after heavy rains and from the weight of the passing traffic, and would require constant care to raise it, and reinstate it to its original level. Indeed, we are disposed to attribute the accident to the water filtering into the loose and porous embankment, which caused the disrupture of the puddle-wall, as the first crack was seen in the centre of the embankment, and about 12 feet down its outward side, occasioned, probably, by the settlement and consolidation of loose earth when the water got in contact with it. The bank dropping in the centre would soon afford a passage for the accumulated water at the top, which gradually washing and breaking it away, would ultimately occasion this frightful chasm, and release the angry water, scattering death and destruction down the ill-fated valley.

Again, the embankment was formed by means of tram-roads and waggons, instead of the old-fashioned and more effective three-wheeled carts; it was not raised in regular lifts or layers, say 2 or 3 feet in thickness, so that the earth might become thoroughly consolidated as the bank rose, and this consolidation would have been hastened and perfected by passing over it the weight of the material of which it was composed. As the race of our old and practical coal-engineers are dying off, we may hear more of these lamentable accidents; the modern school of engineers devote themselves more to railway and other similar works, and large hydraulic works are now few.

* See *Builder*, vol. x., pp. 107, 119, 151.

We have now two of Telford's plans for reservoirs lying before us, the one (Rotten Park) a 50-feet bank, top bank 20 feet, puddle 15 feet at base and 6 feet at top, inner slope 3 to 1, outer 2 to 1; another (Hurleston), height of embankment 40 feet, top of bank 10 feet, puddle at base 10 feet, top 4 feet, inner slope 3 to 1, outer 2 to 1; and could instance many others; but these are successful works, and have been in operation many years. "Look on this picture and on this." The great defect of the work that has failed seems to be the loose and porous embankment, the top is too narrow for an altitude of 90 feet, the puddle-wall too thin; but that perhaps would not have been of so much consequence if the bank had been of good solid materials. There is no puddle-lining to the inner sides of the embankment; no proper sluices with wastes to lower the water below the waste weir if rendered necessary, or to assist the weir; and no discharge-pipe to empty the reservoir at any period if required. The slopes are too steep, they should not have been less than 3 to 1 inside, and 2 to 1 out.

These observations are necessarily hastily made: we may look into the questions involved more carefully on another occasion.

The subscriptions for the sufferers already amount to 17,000*l.*

THE ARCHITECTURE OF PARIS UNDER NAPOLEON III.*

THAT vast subject, the formation and architecture of cities, must be separated into its divisions, and what is now progressing in the French capital under each of these, must be seen, that an adequately comprehensive idea may be obtained of the work of improvement and decoration that is there undertaken, and is already in great part accomplished. The perambulation of Paris; and the study of the entire subject,—comprising the planning of routes of communication; the disposition of space for aëration; the realization of street-architecture proper, in the perspective of streets and grouping of buildings; the provision, and the laying out and management, of suburban parks; the great engineering and sanitary works, as of sewerage and water-supply; and the architecture of the several kinds of structures, and the individual examples,—however, demand much more time than is given to them usually. Accustomed to the slow progress of London, not in the decorative part of architecture merely, but towards objects, as of time-saving, and sanitation, of which Englishmen consider themselves particularly appreciative, even architects are not prepared to look for all the progress that is being made elsewhere, in each of the several branches of the improvement of a capital. An English architect must be astonished with what he sees in the shortest possible glimpse of Paris; but we apprehend that he seldom comes away with real apprehension of the quantity of the work there in progress, or of the nature of it in some of the most important particulars. Influenced as we have said; having always heard that sewerage and water-supply, out of England, are not much cared for; not knowing where to look for new buildings, excepting in the *boulevards* of which he has heard the names; and often but little acquainted with French publications, he is inevitably to some extent narrow-minded, or more than an architect should be, and than we ourselves like to say that an English architect can be. He would be so, even were there not the unfortunate separation of architecture from engineering, in the study or educational course, and were we not in this country still disputing about styles, and so allowing art to escape attention,—a mistake which, at least for the moment, is not made by the French. But there is one excuse for the coming away from Paris with chiefly a vague sense of astonishment at the evidence of costly expenditure that is noticed,—with which feeling is sometimes mingled one depreciatory of the architecture in certain characteristics or details. The maps that ordinary travellers can provide themselves with, are worthless: Bradshaw was publishing so lately as last year, a plan that did not show the Boulevard de Sebastopol; and the French plans which include this line, and some of the more recent *boulevards*, are very incomplete.

Thus, the visitor who has not made a preparatory study of the subject, has nothing to prevent his having the common notion that the Rue de Rivoli, the last additions to the Louvre, the *boulevard* just now named, the improvements about the Champs Elysées, and the Bois de Boulogne, comprise nearly all that he had occasion to see. Therein he would make such a mistake as, were we in London, in addition to our sewerage works, effecting street-improvements, and those extending to Paddington, Islington, Hackney, Camberwell, Vauxhall, and other suburbs, and were we producing much good architecture in each of them and the more distant environs,—and, in our central quarters, in transverse and side streets, as well as in the main routes,—a Frenchman would make who looked only at Cornhill and Cheapside, Pall Mall, and Regent-street.

There are defects, as we ourselves consider, in the architecture of many of the recent buildings of Paris, faults which might be obvious to an architect trained in such a school of Italian architecture as that of Barry, or of Greco-Italian as that of Cockerell, or to one acquainted with the best of the recent works in Manchester and Liverpool,—defects that we have occasionally adverted to, and that we intend to further particularize. But faulty though the architecture may be to a certain extent,—and, apt, as much French work is, to be *crotchety*,—there is real art-work in it. In details, it is full of the evidence of, at least, design,—as it is of loving labour of art-workman, ornamentist, decorator, and sculptor; whilst the subjects upon which the hand of the architect-designer is brought to exercise its power, offer advantages which there are not in the small divisions of frontage, and the varying heights of the buildings in the London streets. Moreover, in France, the architect is usually, and not exceptionally, called in; the *art* is appreciated, and deemed essential; and the artist, architect, and professional man, has his judgment deferred to.

To describe, and treat of, the general improvements of Paris as we could wish to notice them, is beyond the limits of the *Builder:* we can but take up from time to time, branches of the subject, trusting, as now, that, whilst having alluded to the existence of a very large quantity of embellishment in building, to be added to that seen in the new *boulevards*, we have been able to controvert the notion that the work of improvement is confined to that which is costly, or at most decorative, and that we have explained or shown, that it is aimed, as much as at any other object, at that of ministration to the first wants, or the healthful existence, of the population of a great city. But this latter influence we believe to be exercised even by the beautiful in art.

We have so recently compared the mortality of one capital with that of the other,* found the truth of statements of the progressing amelioration in health of the population of Paris, and shown the absence of foundation for the supposition of a great superiority of London, that we need not here repeat information as to the results of so much of the ministration alluded to, as belongs to the formation of new and wide thoroughfares and spaces, and to that portion of the sewerage which is completed. We are about to speak of other architectural features of Paris, than the street-planning and landscape-gardening, or than the works of engineering. In the sufficiently extensive subject that is left, or what is sometimes called *architecture proper*, we shall confine ourselves too, chiefly to the private buildings, which are illustrated by Mons. César Daly in the valuable publication of which our readers have been more than once informed, but which claims here a detailed notice. Of the architecture of the public buildings of Paris, numerous illustrations are to be found in the "*Revue Générale de l'Architecture et des Travaux Publics*," the periodical which Mons. Daly has edited for a quarter of a century with untiring devotion in the propagation of right principles, and in the dissemination of facts, and with an ability in the illustration-department of that work, the results of which are very remarkable. In the same periodical, have lately appeared several valuable articles on the improvements generally.

Though the public buildings have an art-character of their own which should be included in the matter of a complete study of the architecture, and though they contribute in their positions to a general effect, it is of course by the private buildings, as the majority of the structures, that much of the physiognomy of the French capital is given. Many of these, although very clean and new in appearance, were erected in the time of Louis Philippe. In most of these latter, a revival of the Renaissance, with exuberant ornamentation, sometimes very naturalistic in treatment, may be observed. The quantity of work was sufficient to influence greatly the art which has followed in the present reign, and to have helped to train the able hands that were employed under Mons. Duban, after the revolution of 1848, on the completion of the river front of the Louvre, in which the parts now as ornament were previously *en bloc*,—having so remained since the period of the erection. The portion of the front in question, now presents details which are equal in design and execution to those of any building of the period of the original Renaissance. These works of restoration, or rather completion, again trained the hands for the production of the ornament of the additions to the Louvre.

But it was in 1852, that the particular movement that it was Mons. Daly's object to illustrate, may be said to have commenced,—"an exceptional movement," as in his original prospectus he very fairly designated it, "in the undertaking of private buildings."

Side by side with this particular activity, the commerce and industry of the country have taken great strides; wealth has helped to create luxury and the desire of comfort; and in answering to the demand, many modifications have been made in the domestic architecture. Greater choice of materials, suites of rooms (*appartements*), better arranged in plan, the charms of painting and sculpture more frequently invoked, and the direction of skilful architects, are instanced by Mons. Daly, as characterizing the time. With these he includes, as a feature in plans, larger rooms; though we have ourselves noticed in central quarters of Paris, where ground has become of enormous value, a diminution in the size of rooms; and writers in French journals are constantly speaking of that tendency. Disadvantageous as the tendency may be, it helps to produce that very skill in one respect, which characterizes the productions of French architects. It is well exhibited through the medium of the work before us; in which, plans, many of them arranged together on a single sheet for comparison, form one of the especial and valuable features.

In the scheme of his undertaking, Mons. Daly adopts a classification of the subjects, which adds to the value of the work for purposes of reference, as well as educationally, when trouble is taken to understand it. The plates illustrate the recent domestic architecture of Paris, and the environs; but the original distinction between town and country houses, is perceived to be no longer exact. Under the old *régime* of the *grands seigneurs*, as remarked by Mons. Daly, there were in the city, small shops and large *hôtels:* in the country, there were paltry houses, farms, and majestic *châteaux*. Under the industrial and commercial *régime* of modern society, there are, in the city, elegant houses built for letting, with sparkling magazines of goods, and *hôtels* rather comfortable than vast; and there are in the country, modest farm-houses, but often pretty, and very rare *châteaux*. Moreover, there has sprung up, in the suburbs of great cities, and along the lines of railway, a new class of domestic architecture, which, he says, may be designated "suburban."

We may ourselves observe, to those who may not have read the articles on Paris, in our volume of the year 1861,—wherein we referred to the particular matter,—that the recognition of this growth of the class of building, and division of domestic architecture, here called "suburban," is particularly important in the case of Paris. The suburbs which, beyond the fortifications, are becoming occupied by houses of the first-class, are several of them, like the district between Neuilly, Champerret, and Sablonville (Louis Philippe's estate), of most recent formation; and the English architect, who desires to know what is being done, architectually speaking, in and about Paris, should not omit to visit them. The

* "L'Architecture Privée au dix-neuvième siècle, sous Napoléon III.: Nouvelles Maisons de Paris et des Environs. Plans, Elévations, Coupes, Détails de Construction, de Décoration et d'Aménagement, par M. César Daly, Architecte du Gouvernement, Directeur-fondateur et propriétaire de la *Revue Générale de l'Architecture et des Travaux Publics;* Membre Honoraire et Correspondant de l'Académie Royale des Beaux-Arts de Stockholm, de l'Institut Royal des Architectes Britanniques, de la Société des Beaux-Arts d'Athènes, de l'Académie Impériale de Saint-Petérsbourg, de la Commission des Savants du Muséum Germanique, etc., etc. 2 volumes in folio, composés de Gravures sur acier, et d'un texte illustré pas des Gravures sur bois. Paris. A. Morel et Cie." [In progress.]

* See p. 164, *ante:*—"The Improvements in Paris: The Question of their Importance in the view of the increasing Mortality of London."

district named is to the north-west; but there are some charming country-houses at the very opposite point of the compass, or south-east, one of them at St. Maur, by Mons. P. Manguin, given by Mons. Daly. An example which we gave in our volume for 1862, was that of a house by Mons. Sedille, in the village of Boulogne, which is south-west of Paris. The architecture of all these suburbs, and that of numerous places like Enghien and St. Gratien, St. Cloud and Bellevue, accessible by railway, as well as of small towns farther distant, but similarly connected with Paris, may be generalized as of most recent creation. With it has been developed a freshened taste for gardening. English skill in the latter art has long had a certain credit ascribed to it by the French; but till railways enabled people to live out of town, arboriculture and floriculture were confined to the small patches of gardens, such as there lately were, and as indeed still sometimes charmingly terminate the vista through an open *porte-cochère*. But now very commonly, even space in the rear of the old houses *entre cour et jardin*, -as well as that between the court and the street, originally occupied by one-storied dependencies of the main building,—is being appropriated for lofty structures, to produce the largest possible rental; though conservatories, and trellis-covered walls, are great features in buildings of every class. Of course, there are houses yet with patches of ground and shrubs; and there are some few persons wealthy enough to build new houses detached and "*entre cour et jardin*." Several of these, though in Paris, have nearly as much of the suburban villa, as of the town-house character.

Still, as we said in one of the articles we have alluded to, you may leave Paris by any of the roads, and can walk any number of *mètres* or *kilomètres*, passing by in the way, little as compared with that which the London suburbs afford, of the combination of building, art, and landscape gardening, which constitutes realization of the idea of suburban architecture; although you may very likely, meet with evidence of taste which you could not meet with in the other case, and will at least be spared some offences against taste. The class of architecture, however, has, as we have said, sprung up; and is growing, now that direct routes lead to the newly-formed quarters within or without the fortifications, and to the railway-stations whence the more distant localities are reached.

Mons. Daly explains the origin of a change which, though it be unappreciated by an ordinary visitor to a city, has become important in our art, somewhat in these terms. He says;—

"It is no longer the nobility only which has town-house and country-house; it is not, even more, the banking and upper *bourgeois* class; it is the entire *bourgeoisie* that wishes to divide its existence between town and country, noise and calm, activity and restorative repose."

He might have said, as in "*Les Embarras de Paris*,"—

"Est-ce donc pour veiller qu'on se couche à Paris?"

For, the Satire in which Boileau begins with hearing:—

". . . . les chats de toutes les gouttières,"

the mice and rats that,

"Semblent, pour m'éveiller, s'entendre avec les chats,"

the crowing of cocks, the hammering of the "laborious Vulcan," the masons' working, and the opening shops; and ends saying that the bells,

"Pour honorer les morts font mourir les vivants,"

is accurate description, to this day.

Mons. Daly, however, ascribes the "immense development" of *suburban domestic architecture*, and its particular character, to the accrued importance of the *bourgeoisie*, and the easy circumstances, and enlightenment of the class. He regards the architecture referred to, as prevailing over that of the country, the true *châteaux* being exceptional in the series of rural habitations, and "no more in fact, than great suburban habitations transported into the fields."

He classes domestic architecture into *urban*, *suburban*, and *rural*, and dedicates his work to the two first of these.

The division which may be called *urban domestic architecture* again divides itself into two groups,—1, "*Hôtels Privés*," which may be interpreted, houses planned for the occupancy of the proprietor, and not for letting; and 2, "*Maisons à loyer*," or houses planned for occupation by many different tenants, and sometimes with shops or *cafés* in the ground-story. This latter group, as might be supposed, contributes the largest number of examples to Mons. Daly's work; and, numerically, from dimensions of many of the buildings, and from localization more especially in the central quarters, it contributes perhaps most to the physiognomy of Paris. In the first group appear to be included, some *hôtels* built for the occupation of two or more families, or perhaps branches of the same family.

Each one of these groups, as also the group of suburban villas, is divided into three classes, according to the size and character of the building. The sets of plates of examples, each class, are accompanied each by a sheet of plans of additional examples (and in one case by two sheets) as already referred to, drawn to the same scale, and having a common reference. Thus, the work affords a large body of matter of suggestion in planning, over and above what is given by the fully-illustrated examples. Each set of plates, besides the title at the foot of each plate, has a separate distinguishing letter for the example, and a figure for the number of the class. Cottages, *châlets*, and conservatories, find place in the work, besides ample details of the town-houses.

To say that the work gives a *large proportion* of the good examples of architecture in Paris, might not be true, the number of such examples being so very great: there are some admirable works omitted. No one would be less inclined than Mons. Daly, to put forward his plates as a *substitute* for a detailed examination of buildings generally in the capital. But, it would be scarcely possible to use the number of his plates, about 250, to greater advantage. Everything is shown, described, and figured completely; and the engraving is exceedingly well done. There is no other publication devoted to the architecture of Paris, that is to be at all compared, or mentioned, with this for accuracy and clearness of explanation; and sorry are we to say, that there is no English publication of a like character.

Passing now to the decorative aspect of the architecture itself, let us point out before concluding this first notice of the publication, certain variations of an important feature, that are curious, whilst serviceable to the classification.

There is one feature that nearly all the buildings of Mons. Daly's three groups have in common. We mean the Mansard roof. It has generally dormers, or lucarnes, or skylights; or sometimes, it has dormers with also lucarnes higher up on the roof. But, difference in treatment of the Mansard is one means of distinguishing the "*hôtel privé*" from the "*maison à loyer*."

In the latter class of buildings, the roof bears, comparatively speaking, a small proportion to the height of the front; though its height is always such as is deemed sufficient for rooms of some kind, in it. In the building No. 1, Boulevard de Sebastopol (Rive Gauche, we think), by Mons. Lecomte, the roof, which is convex-curved, not of the Mansard form, is indeed about 20 feet rise, and contains two stories; but such an arrangement is not usual in the "*maison à loyer*" of nineteenth century date. Though it is one characteristic of the "*maison à loyer*" to appropriate space in the roof, for the rooms of all the servants of the *locataires* or tenants of the *appartements* below, the sleeping-space is seldom what it should be. Frequent comments are made by the French press, on the defects of these Mansard rooms. The arrangement, along with that of the top story, or portion of the roof, set back so as to get space for a terrace, is the result of the building regulations, conflicting with the effort to have as many rooms as possible. A certain number of stories, of the ordinary kind, are allowed; anything above this limit must not be in advance of a line, varying with the case, but, generally, one raking at an angle of 45°. The continuous balcony and iron railing crowning the main cornice of the building, is well nigh universal in buildings of this class.

Whilst in the "*maisons à loyer*," the roof has the character described, in the "*hôtels privés*" it is designed to play an important part in the composition. The "*villas suburbaines*" and the "*hôtels privés*" resemble one another very much in this respect, namely that the roof instead of appearing to be a sixth or a seventh of the total height, is nearer to a third, or sometimes almost a half. Spacious bed-rooms, or perhaps the best of the house, are obtained there, solely it would often seem, out of regard for the effect of the dormer-windows; which in buildings of this class would be elaborately enriched, whilst a range of lucarnes above would be rather general than exceptional. It will have been understood that the "*hôtel privé*" is often of no great height, whilst the "*maison à loyer*" will be of as many stories as the law allows. In one of Mons. Daly's best examples of the "*hôtel privé*," that at the angle formed by the Rue de Courcelles and the Rue de Monceaux, by Mons. Delarue, only three bays are carried up to form a regular second story: the remainder of the same floor is lighted by dormers. In this example, however, the chief bed-rooms are on the ground-floor, which is raised on a basement of about five feet in height. In some few *villas* where the roof is not of the Mansard form, it is still prominent by its height. The distinction between the two groups of town-buildings, and the similarity of the roofs of two out of the whole number, three, of the groups, destroys much of the distinction between the "*hôtels*," or town-houses, and the "*villas*" called suburban.

But, some of the chief features of the architecture of Paris start from plan; which last, the particular plan, is governed in an important degree by the arrangement of streets. Some reference to general features of the street-planning, therefore, may fittingly be made as commencement of our next article.

VANDYCK IN ENGLAND.

"This is King Charles his day. Speak it, thou Tower,
Unto the ships, and they from tier to tier"
Ben Jonson, 19th Nov. 1632.

KING CHARLES evinced his appreciation of the genius and services of Vandyck by more than mere approbation. On the 5th of July, 1632, he knighted his favourite painter at St. James's; on the 20th of April, 1633, he presented him with a chain and medal of 110*l.* value;* and on the 17th of October of the same year, conferred upon him an annuity of 200*l.* Another and a rarer honour awaited him an honour without parallel in the history of art.

"With singular delight," says Walpole, following in the wake of Vertue, "Charles went by water to the Blackfriars to view Vandyck's performances, frequently sitting to him himself, and bespeaking pictures of the queen, his children, and his courtiers." Of the truth of this pleasant tradition I am enabled to produce (and for the *first* time) the amplest testimony.

In the Works accounts of the Crown for the year 1635, a payment occurs of 20*l.* (200*l.* of our present currency) for works and reparations done and performed at the Blackfriars, in the months of June and July, 1635, in making a new Cawsey Way and a new Pair of Stairs for the king's majesty "to land to goe to Sir Anthony Vandyck's house to see his paintings." Of so marked an instance of the king's appreciation of Sir Anthony, the very words of the entry, from which I derive my information, deserve transcription:—

"Allowed the said Accomptante for Money by him yssued and paid for Workes and Repairacons donne and performed within the tyme of this Accompte at the Blackfryers in making a new Cawsey Way and a new paire of Staires for the King's Majesty to land to goe to Sr Anthoney Vandike's house there to see his Paintings in the monethes of June and July 1635.....xx^li.^"†

The causeway, as I gather from the same account, was 10 feet in breadth; that piles were driven for the purpose into the Thames, and that stores were taken from the Crown stores in Scotland-yard for this graceful act of kingly courtesy and good sense.

Among the earliest who went by water from Whitehall to the Crown Stairs at the Blackfriars, were the two sons of the Queen of Bohemia, King Charles's nephews,—the fiery Prince Rupert and the less dashing Prince Maurice of the Civil Wars. Go to Combe Abbey, in Warwickshire, and see the daring Rupert and the dashing Maurice, thanks to Vandyck, as if they never could grow old. With what an air of unaffected ease both look from the canvas, and command attention! In Rupert's face and figure there is a touch of Marston Moor, and the surrender of Bristol. Both portraits are marvellously fine.

* This important entry escaped both Malone and Mr. Carpenter, and is now first published. 1633, April 20. A Warrant for a Chain and a Medal of One Hundred and Ten Pounds value to be presented unto Sir Anthony Vandyck (Lord Chamberlain's MS. Warrant Book, I. 328). Let me add (from the same source), that Le Sœur, the sculptor of the Charing Cross statue of King Charles, received in the January of the same year, a chain and medal of 80*l.*

† "Audit Office Records," now in the Public Record Office, London.

The first Lord Craven was a pet with the Queen of Bohemia, the mother of the two princes, and through that queen the portraits of her two sons passed to Lord Craven. Long may they remain at Combe Abbey.

Neither the Church nor the Law made any great demand on the pencil of the illustrious Fleming. I can trace with certainty an archbishop (Laud), and with some uncertainty a lord-keeper (Littleton), and no more.

The Laud, a three-quarters, full face in canonicals, with black square hat on his head, went with the Houghton collection to St. Petersburgh. Though far from a good picture, the University of Oxford offered the Wharton family 100*l.* for it.* A fair duplicate is at Welbeck, and another nearly as good at Lambeth Palace. Pennant saw what he calls an admirable Vandyck of the archbishop at Ampthill Park, in Bedfordshire. This I have not seen, and I am unwilling to rely on Pennant. A fourth portrait of Laud (assigned to Vandyck) was bought, a few days ago, at Lord Lyndhurst's sale, for the National Portrait Gallery; but the price, 72 guineas, was not a veritable Vandyck quotation in the Market of Vandyck.

Of James Stuart, fourth Duke of Richmond, and Lenox, who attended King Charles I. to the scaffold and the grave, and whose two brothers, John and Bernard, fell in the king's cause, there are many full-lengths by Vandyck, and all unusually good. The finest I have seen is at the Duke of Buccleuch's; the next,—but I pronounce with diffidence,—the picture at The Grove. At Horsham, Lord Methuen's, there is a fine example, with variations,—the duke has his right hand on the head of a noble greyhound. The dress is black, and the light, almost flaxen hair, falls in cavalier-shaped ringlets upon his shoulders. Another (with dog) at Lord Ashburnham's, in Sussex; another (with dog) at Apethorpe, Lord Westmorland's; and another at Cobham, Lord Darnley's.

This true Stuart to the backbone was only forty-three years of age at his death, in 1655. Royal portraits excepted, no picture by Vandyck seems to have been so much in request as a full-length of the Duke of Richmond.

Of James Duke of Hamilton, beheaded 1648, there is a noble full-length by Vandyck at the Duke of Buccleuch's, in London. His brother, the second duke, who fell at Worcester, does not appear to have sat. Duplicates at Hamilton Palace and Gorhambury. In this picture we see what Clarendon calls "that cloudiness which is not unnatural" to this vacillating and always undetermined man.

At Lord Clarendon's, The Grove, in Hertfordshire, is a whole-length of William Seymour, Marquis of Hertford and Duke of Somerset (1660), another of King Charles's faithful followers to the last. This is Lady Arabella Stuart's William Seymour. It is not a good picture.

To the rendering and transmitting to posterity of a very fine head of his early patron, Thomas Howard, Earl of Arundel, Vandyck seems to have given his greatest care and his happiest touches. That fine three-quarter and full face so admirably engraved by William Sharp) is, though somewhat injured, still a masterpiece in every way. It was an Orleans picture, and is now the purchase one of the treasures of Stafford House. Look at this picture well,—Garter, Clarencieux—heralds all. You see before you as he lived "the Most Noble and Excellent Thomas Howard, Earl of Arundel and Surrey, Earl Marshal and Premier Earl of England, Lord Howard, Fitzalan, Howbray, Segrave, Brews of Gower, Fitzalan, Maltravers, Oswaldestree, Maltravers and Greystocke, Knight of the Most Noble Order of the Garter and of his Majesty's Most Honourable Privy Council in the kingdoms of England, Scotland, and Ireland." You see before you a man superbious and proud, who lived always within himself and to himself.

At Luton (the Marquis of Bute's) was a portrait (3 feet 4 inches high by 2 feet 10 inches wide) of William Howard, Viscount Stafford, beheaded in the reign of Charles II. on the injured evidence of Titus Oates and others. Wagen describes it as spirited in conception and carefully finished, but less clear in colouring than usual. This viscount, the second son of *Marble* Earl of Arundel, married the sole heir in blood of the great and eminent family of Stafford, Dukes of Buckingham.

Another knee-piece, and one of his latest works (1639—1641), represents Thomas Howard, Earl of Arundel (died 1646) and his wife (died 1654) Lady Alathea Talbot by birth. The proud earl and munificent patron of art points with his marshal's baton to a globe marked "Madagascar." The globe is placed between them. When this picture was painted, Lord Arundel was planning a settlement at Madagascar. The original, at Arundel Castle, is by no means in Vandyck's best manner. A duplicate at Knowle, has Junius, the earl's librarian, in place of the countess. Sir Edward Walker, who was "Secretary at War" to the earl when in command of the king's first expedition against the Scots, calls this "an excellent piece done by that famous artist Vandyck."*

Laud's friend and fellow sufferer, the great Earl of Strafford, sat frequently to Vandyck. I have already described that miracle of portrait painting, "Strafford and his Secretary." There are, however, other likenesses of Wentworth that are very fine, and in Vandyck's best manner. At Wentworth House (in Yorkshire) is a noble full-length of him in armour; another, not inferior, is at Wentworth Castle, in the same county; a third, with truncheon in left hand, his right extended, is at Welbeck. At Petworth there is a first-rate half-length of the same earl, also in armour, standing; a rock, and skirmish, in the background.

One of his noblest portraits is at Knowle, in Kent,—a full-length of Edward Sackville, fourth Earl of Dorset (d. 1652) the Sackville who fought the bloody duel with Lord Edward Bruce. Duplicate at Gorhambury. The finest of Ben Jonson's epistles in verse, is addressed to this nobleman, in acknowledgment of timely and unsought assistance:—

> "Gifts stink from some,
> They are so long a coming, and so hard:
> Where any deed is forced, the grace is marred."
> *Ben Jonson.*

Lord Dorset's wife (a Curzon by birth) sat to Vandyck. We shall see her soon.

The features and bearing of another early encourager of his pencil (observe the Arlington black patch) are preserved to us by his ever ready and accurate hand. This was Henry Danvers, Earl of Danby (died 1644). An original, a full-length, in his garter robe, went with the Houghton Collection to St. Petersburg, and in the Houghton valuation is appraised at 200*l.* This picture was given to Sir Robert Walpole by Sir John Danvers. A duplicate, if not an original, is at Dunham-Massey, in Cheshire, the seat of Lord Stamford and Warrington. Danvers began life as page to Sir Philip Sidney, and dying in 1644, was buried at Dantsey, in Wilts.

At Cassiobury (Lord Essex's) is one of the finest Vandycks in the world, the portrait, at full length, of Algernon Percy, Earl of Northumberland, his hand resting on an anchor. This uncertain man was Lord High Admiral of England when Vandyck gave him to posterity. "He was in all his deportment," says Clarendon, "a very great man, and that which looked like formality, was a punctuality in preserving his dignity from the invasion and intrusion of bold men, which no man of that age so well preserved himself from."†

A knee-piece (and master-piece) at Petworth, represents the same great earl in black, with his wife, Anne Cecil, who died in 1637, and their daughter Catherine, who died young. Duplicates are to be seen at Hatfield, Kimbolton, and Gorhambury. The earl is in black, standing; his countess in blue, sitting; and the daughter in white, standing. The lady is the centre figure. The lines of Waller will recur to the student of English poetry while standing before this picture:—

> "You on the barren seas, my Lord, have spent
> Whole springs and summers to the public lent;
> Suspended all the pleasures of your life,
> And shorten'd the short joy of such a wife."

The face and form of Philip Herbert, fifth Earl of Pembroke, and first Earl of Montgomery, have been preserved to us by Vandyck, in more than one full-length, and more than one half-length. There is a full-length at Wilton, and another—not so good—at The Grove. The best half-length is at Dulwich. There is another half-length (seated) at Welbeck; but I question its parentage, though a picture, and a good one, of Vandyck's time.

Of Philip, his son and successor in the earldom (died 1669), there is a faded half-length, in pink, at Wilton. It has been engraved by Lombart.

There is at Knowsley, in Lancashire (Lord Derby's), a so-called Vandyck (head-size, holding a helmet), of James Stanley, Earl of Derby, taken prisoner at the battle of Worcester, beheaded at Bolton, 1651, and buried at Ormskirk, in Lancashire. At the same seat is the companion portrait of his countess, the defender of Latham House; but I do not believe in the Vandyck parentage of either.

"The best portrait I have," says the Duke of Leeds, writing to Sir William Musgrave, the portrait collector, in 1796, "is a head of the Earl of Derby (beheaded at Ormskirk), by Vandyck."

At Combe Abbey, in Warwickshire (Lord Craven's), is a noble full-length of William, first Earl Craven—the Queen of Bohemia's Earl. The name of this fine fellow, known by his pesthouses and his drums, is preserved in Craven-yard, Drury-lane, and Craven-hill, Bayswater.

The features and figure of Edward Somerset, Marquis of Worcester, may be seen on canvas, from Vandyck's hand, at Badminton, the Duke of Beaufort's, in Gloucestershire.

At Longleat, in Wiltshire (the Marquis of Bath's), is the double portrait of Robert Dormer, Earl of Caernarvon, and his countess, Anne Sophia, daughter of Philip Herbert, Earl of Pembroke and Montgomery. Lord Caernarvon fell at the battle of Newbury, in 1643. There is another portrait of him at Wilton. To this nobleman Massinger dedicates his "A New Way to Pay Old Debts." Massinger was a retainer of the Pembroke family.

Another nobleman of note who sat more than once to Vandyck, was Richard Weston, Earl of Portland, and Lord High Treasurer, who gave the commission to Le Sœur for the statue of Charles I., at Charing-cross. The best portrait of him is at Gorhambury (Lord Verulam's); a duplicate is at Kingston Lacy, Dorsetshire; and a third at the Grove, all three full-lengths. Lord Portland was fond of the muses and of art, and often relieved Ben Jonson's necessities. "The head of the Kingston Lacy picture," says Waagen, "is very delicate, and also the right hand, but the accessories are scenically treated." Waagen adds, "to all appearance painted about 1638." How infallible we are. Why, Weston was dead in 1634.

> "If to my mind, great Lord, I had a *state*,
> I would present you now with curious plate
> Of Nuremberg or Turkey; hang your rooms
> Not with the Arras but the Persian looms:
> I would, if price or prayer could them get,
> Send in what or Romano, Tintoret,
> Titian or Raphael, Michael Angelo,
> Have left in fame to equal, or out-go
> The old Greek hands in picture, or in stone
> . . . This I would do could I think Weston one
> Catched with these arts."—*Ben Jonson.*

This great lord has a monument to his memory in Winchester Cathedral.

William Cavendish, Earl, Marquis, and Duke of Newcastle, and the liberal patron of two generations of poets, stood to Vandyck for the fine full-length still at Welbeck.* There are repetitions at Althorp, the Grove, and Burleigh. The Earl, for that was his highest rank in Vandyck's lifetime, was careful of his Vandycks, as his wife assures us in that delightful reading, the Life of her husband.

"My lord," writes Margaret Lucas (Duchess and authoress), "sent to his other son, Henry, now Earl of Ogle, to endeavour for so much credit, that the hangings and pictures (which my lord esteemed very much, the pictures being drawn by Van Dyke) might be saved, which he also did."†

Of the earl's brother, Sir Charles Cavendish, there is a full-length at Welbeck.

Two great noblemen who are said to have sat to Sir Anthony were both dead before his arrival in England. We may, therefore, safely attribute the picture at Blenheim, of Villiers, first Duke of Buckingham, and the picture at Wilton, of William Herbert, Earl of Pembroke, to a different hand, or perhaps to two different hands.

At Chatsworth, in the dining-room, is a full-length, when young, of William Cavendish, third Earl of Devonshire (and father of the first, the *Revolution* Duke), in a black silk dress, with a broad falling collar. In his left hand, which rests on his hip, he holds his hat; and in his right, which hangs down, his handkerchief. This picture is very fine, and stands its ground well with the other Vandycks in the room.

* Walpole's Works, ii, 247.

* Sir Edward Walker's "Historical Discourses," p. 217.
† I do not believe in the Vandyck parentage of the Petworth seated full-length of the father of Algernon, who died in 1632.

* The Welbeck portrait, head only, is engraved in Houbraken.

† Duchess of Newcastle's Life of the Duke. Folio, 1667, p. 91.

At Grimsthorpe Castle, in Lincolnshire (Lord Willoughby d'Eresby's), are full lengths of Robert Bertie, Earl of Lindsey, who fell (1642) at Edge Hill, and of Montagu, Earl of Lindsey, his son. It is impossible for the student of English history, and of Edge Hill Fight in particular, to look on these fine pictures without emotion.

At Hamilton Palace, in Scotland, may be seen one of the best Vandycks north of the Tweed,—William Feilding, first Earl of Denbigh. He is drawn in an Eastern hunting costume, with a gun in his right hand; next him a boy in a Persian dress, aiming at a parrot on a tree,—the background landscape carefully executed in a warm tone. Denbigh served as a volunteer on the side of the king, at the battle of Edge Hill,—his son and successor fighting on the other side. Lord Denbigh's sister Mary was the wife of the first Duke of Hamilton.

Two fine whole-lengths exist of William Villiers Viscount Grandison,—one at Euston (the Duke of Grafton's), the other at The Grove (Lord Clarendon's). If there is any choice between the two, it must be a matter of association; and, in that way, I prefer the duke's. The duke is descended in a direct line from the daughter of Lord Grandison, the famous Barbara Villiers, Countess of Castlemaine and Duchess of Cleveland—the lady who sat for the first figure of Britannia ever placed on an English coin. Lord Grandison married Mary, third daughter of Paul Viscount Bayning, and dying at Oxford in 1643 of the wounds he received at the siege of Bristol, was buried in Christ Church, Oxford, where his too celebrated daughter erected a monument to his memory.

At Hagley (Lord Lyttelton's) is a fine whole-length, in black, of James Hay Earl of Carlisle (died 1636), the most expensive Scot who came into England with King James I., and the one (says Clarendon) who was liked the most and held in the most esteem by Englishmen. His second wife was Lucy Percy, daughter of the Earl of Northumberland.

At Buchanan House, in Scotland, is the head, supposed to be by Vandyck, of the great Marquis of Montrose, hanged and beheaded at Edinburgh in 1650. This portrait I have not seen, and I am assured by competent judges that it is not by Vandyck.

The Duke of Buccleuch possesses the full-length in buff, red, and breast-plate of a true cavalier, George Gordon, second Marquis of Huntly. Another, equally thought an original, is at Drummond Castle. The marquis, who succeeded his father in 1636, was beheaded by the Covenanters at the Market Cross of Edinburgh in 1649.

The same rich nobleman, who has more addresses in Blue Books and Court Guides than any other nobleman or gentleman in the *three* kingdoms, has a full-length in buff, red, and breast-plate, of Henry Rich, first Earl of Holland, beheaded 1649. Duplicate at The Grove. "This Lord Holland was a man," says Clarendon, "of a pleasant and companionable wit and conversation; of a universal jollity, and such a licence in his words and in his actions, that a man of less virtue could not be found out." He was very handsome, and much—too much, it was whispered—in the favour of Queen Henrietta Maria.

At Taymouth, in Scotland (the Marquis of Breadalbane's), is a much-admired whole-length of Lord Holland's elder brother, Robert Rich, second Earl of Warwick (died 1658); the hands, unfortunately, gloved:

> "Warwick's bold Earl! than whom no title bears
> A greater sound among our British Peers."
> *Waller.*

A second of the same nobleman (engraved in Houbraken and in Lodge) is at Wimpole (Lord Hardwicke's), in Cambridgeshire. The picture at Warwick Castle is a copy from Lord Hardwicke's.

In the *hall* of Lord Chancellor Clarendon's collection now at The Grove, is the full-length, in armour, of George Hay, second Earl of Kinnoul, who succeeded his father in 1634, and, dying in 1644, was buried at Waltham Abbey, in Essex. This lord, before his father's death, was captain of the Yeomen of the Guard to King Charles I.

Another knee-piece (a seventh) represents Mountjoy Blount, Earl of Newport (died 1665), and George Lord Goring, son of the first Earl of Norwich, who died in 1662, with Charles, his son and successor (died 1670) in the centre of the composition, tying on his scarf. The original is at Petworth, and a repetition at Kimbolton, both fine. Whoever remembers this charming and characteristic composition will like what follows:—

"There was at that time [1650 at Madrid] the Lord Goring, son to the Earl of Norwich: he had a command under Philip the Fourth of Spain, against the Portuguese; he was generally esteemed a good and great commander, and had been brought up in Holland in his youth, of vast natural parts; for I have heard your father [Sir Richard Fanshawe] say, he hath dictated to several persons at once that were upon despatches, and all so admirably well, that none of them could be mended. He was exceedingly facetious and pleasant company, and in conversation where good manners are due, the civilest person imaginable, so that he would blush like a girl. He was very tall and very handsome; he had been married to a daughter of the Earl of Cork, but never had a child by her. His expenses were what he could get, and his debauchery beyond all precedents, which at last lost him that love the Spaniards had for him, and that country not admitting his constant drinking, he fell sick of a hectic fever, in which he turned his religion, and with that artifice could scarce get to keep him whilst he lived in that sickness, or to bury him when he was dead."*

Of this Lord Goring, who died abroad in the character of a Dominican friar, the great Lord Clarendon tells us that he had wit and courage and understanding and ambition, uncontrolled by any fear of God or man; adding that "dissimulation was his master-piece."

An eighth double knee-piece portrait represents the celebrated Lucy Percy, Countess of Carlisle, and her sister Dorothy, Countess of Leicester. Where the original is I know not. Walpole bought the Penshurst copy, in 1764, for twenty-nine guineas.† Lady Leicester is in red. This picture, which Walpole calls "very fine," was sold at the Strawberry Hill sale for 231*l.*, and is now at Basildon Park, in Berkshire, the seat of the late James Morrison, Esq.‡

I have but one more to chronicle of the twin and knee-piece character, and that one is very little known,—the subject, Arthur, Lord Hopton, of Stratton (died 1652), and his son. He is seated, the son is standing; both are in black. This once fine picture, for it is sadly injured, is still to be seen at Rushbrooke, near Bury St. Edmund's, in Suffolk, the moated seat of the Jermyn family.

At Bothwell Castle, in Scotland, is a believed-in Vandyck, of Paul, second and last Viscount Bayning (died 1638). He is in black, with his left hand on his hip, his right holding a black hat. Of this picture, which I have not seen, Waagen writes, "Easy in motive, and carefully painted in his brownish tones;—the heavy colouring of the landscape and the many details show another hand." §

Another man of note in his day sat to Sir Anthony more than once. This was Sir Kenelm Digby, of Stoake Dry, in the county of Rutland, "a gentleman"—I adopt Ben Jonson's words—"absolute in all numbers."

I have already catalogued the Welbeck double portrait of Sir Kenelm and Lady Venetia, and have now to name the fine half-length of him at Windsor, where he is drawn seated, with a celestial sphere on his right, in allusion to his astrological studies. Duplicates at Knowle and in the Oxford Picture Gallery. In his Will, Sir Kenelm desires to be buried with his wife, and without—an epitaph.

Another double picture represents Sir Kenelm and Lady Venetia, his wife (died 1635) and their two children, Kenelm and John. Of this, one copy may be seen at Sherborne (Lord Digby's), in Dorsetshire; and another (the Harleian picture) at the Duke of Portland's, at Welbeck. "At Goathurst, in Bucks," says Aubrey, "is a rare original picture of Sir Kenelm Digby and his Lady Venetia, in one piece, by the hand of Sir Anthony Vandyck." ‖ Where is this picture concealed?

I shall group together the names of four male sitters, all four gentlemen of the chamber to King Charles I.:—

1. Endymion Porter, a name already mentioned, and well known to every student of the reign of Charles I. A portrait of Porter, by Vandyck, was exhibited by Lord Hardwicke at the British Institution in 1829.

2. John Ashburnham (died 1671), the person so deeply implicated in the blundering escape of Charles I. from Hampton Court. I have not seen this picture; it is, I am told, at Lord Ashburnham's, in Sussex; another, at Hinton St. George, in Somersetshire. Ashburnham's second wife (a Kerr by birth), was the widow of Lord Poulet, of Hinton St. George.

3. Henry Jermyn (afterwards Earl of St. Alban). Full-length of at Rushbrooke, in Suffolk, the ancient seat of the Jermyn family. He is standing, dressed in black slashed with white, his right hand gloved, his left concealed behind his dress. This is a fine, neglected, and little-known picture.

4. Thomas Killigrew. "Mr. Thomas Killigrew, with a Mastiff Dog," by Vandyck, was sold at Sir Peter Lely's sale, to Lord Newport, for 83*l.* It is now Lord Bradford's.

At Audley End, in Essex (Lord Braybrooke's), is a portrait of Sir Dudley Carleton Viscount Dorchester (died 1628), long the English ambassador at Venice and the Hague, and whose name I have already had occasion to introduce to the reader. I saw this picture many years ago at Audley End, and my impression was then *against* its Vandyck parentage.

Evelyn speaks most encomiastically of a Vandyck portrait of Sir Thomas Hanmer (the second baronet, died 1678); he calls it "one of the best he ever painted." It was then in the possession of Lord Newport. This I have never seen.

A very fine knee-piece of Sir William Killigrew (died 1693) was bought of Mr. Farrer by the present Duke of Newcastle, and is now at Clumber, inscribed "A Vandyck, pinxit 1638." Sir William was a gentleman usher of the Privy Chamber of Charles I. and Vice Chamberlain to the Queen of Charles II. Throughout the whole of the civil war he had command of the troops which guarded the king's person.

Sir Robert Walpole, like Lord Clarendon before him, collected Vandycks.

The Houghton portrait (three-quarters) of Sir Thomas Chaloner, the regicide, went to St. Petersburg.

Walpole says (Works, ii. 243) that the Sir Thomas Chaloner of Vandyck was governor to Henry Prince of Wales. This is an error. The picture represents his son, governor to the prince, who died in 1615, and is buried at Chiswick, in Middlesex. This picture, in the Houghton valuation, was appraised at 200*l.* Chaloner died abroad before the Restoration.

The Houghton full-length of Sir Thomas Wharton, brother of Philip fourth Lord Wharton, bought by Sir Robert Walpole of the Wharton family, hangs in the dining-room at Chatsworth.

The portrait—seated—of Sir Christopher Wandesford, Lord Deputy of Ireland in 1640, was a Wharton and Houghton picture, and is now at St. Petersburg.

Another Wharton and Houghton picture is at Chatsworth, a full-length of Arthur Goodwin, the friend and colleague of Hampden, and father of Jane, second wife of Philip Lord Wharton. Walpole calls it "one of the best" of the Wharton purchases made by his father. Sir Robert gave this fine portrait to Chatsworth.

The noble head of Inigo Jones (of which Lord Hatherton has a copy by Hogarth) went with the Houghton collection to St. Petersburg. Could not some change be effected? The head of Inigo, by Vandyck, should be in England. Let my Lord Stanhope try to obtain this treasure for his National Portrait Gallery.

Lord De Tabley has a knee-piece (a so-called) of Sir John Byron, K.B., first Baron Byron (died 1652). He is drawn as Constable of Chester, with a black page holding his horse. This picture must be put in an Apocrypha of Vandyck's works.

That sprightly poet, Sir John Suckling, stood to Vandyck (so some assert), and, doubtless, chose his own posture. He is at full length, holding a copy of the folio edition of Shakspeare. A rock, on which his left arm leans, is inscribed "Ne te quæ sciveris extra." Sir John, who died in 1641, was a professed admirer of Shakspeare.

"My Lady Southcot," says Aubrey, "whose husband hanged himself, was Sir John Suckling's sister . . . At her house in Bishop's Gate Street, London, is an originall of her brother, Sir John, of Sir Anth. Van Dyke, all at length, leaning against a rock, with a play-book, contemplating. It is a piece of great value." *

The original, more, as Sir Joshua thought, in Jansen's manner than Vandyck's,† is at Dr. Lee's, at Hartwell House, in Buckinghamshire. Dr. Lee is descended from the Sucklings.

I will mention *finally* that Evelyn records his having seen at Bennet, Lord Arlington's, "two of Vandyck's, one of which was his [Lord Arlington's] own picture at length, when young, in a leaning posture; the other, an "Ennuch singing." Of the boy Bennet I know nothing more. The

* Aubrey's "Lives," ii. 550.
† Lysons's "Mag. Brit.," under "Hartwell."

"Eunuch singing" is, I presume, the picture thus described at fol. 499 of the appraised catalogue of King Charles I.'s collection:—

"St. James'
Ye Singing Man, by Sr Anthony Vandyke. £20.
Sold Mr Jasper ye 22d March, 1649, for £23."

My next communication will "catalogue" the King Charles I. "Beauties," who sat to Sir Anthony in the Blackfriars of London.

PETER CUNNINGHAM.

WROUGHT-IRON GIRDERS UNDER A MOVING LOAD.

THERE are probably few of the structural applications of a wrought-iron girder in which it is not subject to a moving load. In the form of a bridge-girder, or perhaps built into one of the new massive warehouses, or as a cross-beam of a heavy travelling crane, a wrought-iron girder has to undergo stresses varying in amount, but necessarily accompanied with the vibrations due to moving loads, and generally with the absolute application of intensity always caused by a suddenly-applied strain. Confining ourselves, at any rate for the present, to an experimental and practical consideration of the behaviour of a wrought-iron girder under a moving load, we find that the best engineering practice appears to generally make the proof strength of wrought-iron from twice to three times its usual working strain; while the ultimate strength is often made as much as from four to six times the working strain.

In an interesting paper read last month before the Royal Society, Mr. Fairbairn objects to the Board of Trade limit, for wrought-iron railway bridges, of five tons per square inch of actional area. It is well known that a compressive strain of 4 tons to 4½ tons is generally held to correspond to a tensile strain for wrought iron of 5 tons. The Board of Trade applies this limit to both the top and bottom chords of a wrought-iron girder; and, Mr. Fairbairn says, "It is even possible to disproportion the top and bottom areas of a wrought-iron girder calculated to support six times the rolling load, as to cause it to yield with little more than half the ultimate strain, or 7 tons on the square inch. For example, in wrought-iron girders with solid tops, it requires the sectional area in the top to be nearly double that of the bottom, to equalise the two forces of tension and compression; and, unless these proportions are strictly adhered to in the construction, the five-ton strain per square inch is a fallacy which may lead to dangerous errors." It will be remembered that, many years ago, Mr. Fairbairn showed that actually more than 20 per cent. of the strength of the iron is destroyed by the mere process of punching the rivet-holes,—an injury to the tenacity of the iron quite independent of and additional to the loss of the metal punched out. This is the reason that Mr. Hawkshaw had all the rivet-holes of the plates for the new Charing-cross Bridge filled out by a multiple drilling-machine, first brought forward some years ago by Mr. Cochrane, lately deceased, a partner in the eminent firm who contracted for the bridge. The very trying quality of merchant wrought-iron is another element of uncertainty, as many plates made and sold which have not more than 20 tons per square inch ultimate strength. "Again," says Mr. Fairbairn, "it was ascertained from direct experiment that double the quantity of material in the top of a wrought-iron girder was not the most effective form for resisting compression. On the contrary, it was found that little more than half the sectional area of the top, when converted into rectangular cells, was equivalent in its powers of resistance to double the area when formed into a solid top plate." The weight of the structure itself—increasing with the cubes, while the strength increases only as the squares—is also disregarded by the Board of Trade rule; and, consequently Mr. Fairbairn, "we are not informed whether the breaking weight is to be so many times the applied weight *plus* the multiple of the load; or, in other words, whether it includes or is exclusive of the weight of the bridge itself." It is, besides, the case that this requirement of 5 tons per square inch also applies to the chains of a suspension bridge, which, as their strength is diminished by being bent into an elliptical form, often have the full average strength of good wrought iron of some 25 tons per square inch. It may be remarked with regard to chain cables, or chains formed with a cross stay in the centre to prevent collapse, that the Admiralty proof for these is 11·46 tons per square inch, although a large per-centage of the ultimate strength—sometimes estimated at about one-fourth—is lost in forming the cable bar into links.

Taking into consideration much of what we do know of iron at present, and also of what we do not know, we feel inclined to disagree with Mr. Fairbairn, in his unqualified condemnation of the Board of Trade rule. Of course it is an arbitrary rule. But such rules must always be arbitrary. Besides, so much of our knowledge of irons is yet in a provisional state, that the present rule is probably the best for the present time. Quality of iron and quality of workmanship are evidently such varying quantities, that it would scarcely be safe to take them into general consideration. So many things, indeed, are yet undetermined about wrought iron, besides its varying quality—no two bars, or two parts of a bar being ever alike—that the Board of Trade rule may be considered as being, on the whole, very just. Take, for instance, the effect of vibration on iron. Mr. John A. Roebling, the engineer of the Niagara Suspension-bridge, is stated by Mr. Zerah Colburn to have made some experiments, that very markedly showed the influence of vibration in determining a permanent set. Bars reduced by the hammer to ¾-inch square at the centre, showed a breaking weight of 33 tons to the square inch. They "bore a strain of 20½ tons per square inch without visibly stretching; and when no jar was given to the bars, they would support this strain for a week. Upon any vibration, however, the bars immediately took a permanent set." At the same time, it must be remembered that these bars were reduced by the hammer only at the centre of their length, and that the elongation would take place at merely a portion of the whole length. The exact effect of a low temperature on the elastic limit and the breaking strength of iron, is another point upon which we are unprovided with sufficient data. There exists a vague but very general impression amongst practical men that iron becomes more brittle in cold weather, and the general observation that the elasticity of most substances decreases with the temperature would seem to strengthen this view. We do not know of any systematic published experiments on this interesting question as to the influence of frost on the ultimate strength of iron, beyond one made upon a ¾-inch bar by Mr. Kirkaldy in the month of December, 1860. The bar, "Glasgow B Best," was cut up into ten bolts, "six of which were exposed all night to intense frost, and tested in the morning with the thermometer at 23 deg. Fahr. The other four were kept in a warm place, and carefully protected during testing. Three were tested with gradual, and seven with sudden strains." It is interesting to observe, from the figures given by Mr. Kirkaldy, that "when the strain was gradually applied there was very little difference between the specimen tested in the ordinary condition and the two that were frozen: the former bore 55,717 lb., the latter 54,385 lb.; difference, 1,332 lb., or 2·3 per cent. less." The difference under *sudden* strains was somewhat greater, being 3·6 per cent. less than when frozen. It is a pity that Mr. Kirkaldy was prevented following this particular train of investigations; the more so, as all the ten pieces were taken from the same bar, while, at the same time, the bar itself was of a superior quality, and it is natural to expect that a coarser kind would have shown a still greater difference. It is not improbable to suppose, as a deduction from Mr. Kirkaldy's experiments and from general experience, that the ultimate breaking strength of iron may not be affected by frost, but rather its elasticity—the iron becomes more brittle. The usual perennial increase of railway accidents, whenever there is a frost of long continuance, is at any rate, noticeable. Experiment has shown that the ultimate tenacity of wrought-iron is greater at 32° Fahr. than at 212°; while at 390°, according to Mr. Fairbairn, its tenacity is greater than at 32° Fahr.

The experiments described in the paper read last month before the Royal Society, and upon which Mr. Fairbairn appears to have founded his objections to the Board of Trade rule, are continuations of a similar investigation conducted some years ago. In 1861, Mr. Fairbairn read an important paper to the British Association, in which he gave some of the results of a series of experiments made to ascertain the effect of a moving load on a plate-iron girder. The large model he employed withstood one million applications of a load equal to one-fourth of its breaking weight, but the same model broke down after 5,175 applications of a load equal to one-half of the breaking weight. After repairing it, the model withstood 25,000 applications of two-fifths of its breaking weight, and afterwards three million applications of one-third of its breaking weight without again breaking down. The tables shown by Mr. Fairbairn did not, however, give any account of the deflection or of the permanent set. These omissions are supplied in the paper read before the Royal Society. The author stated that "he has endeavoured to ascertain the extent to which a bridge or girder of wrought iron may be strained without injury to its ultimate powers of resistance, or the exact amount of load to which a bridge may be subjected without endangering its safety." The apparatus intended to carry out the experiments was made so as to first lower the load quickly down upon the beam, and then to produce a large amount of vibration. This plate girder had a (calculated) breaking weight of 12 tons, and weighed 7 cwt. 3 qrs. Its area at top was 4·30 square inches, at bottom 2·40 inches: the area of the vertical web was 1·90 inches, its depth 16 inches, its total sectional area being 8·60 inches. The beam was first loaded with 6,643 lb.—one-fourth of its calculated ultimate breaking weight, under a steady load—but this load was worked up and down on the beam about half a million of times, extending over a period of two months, night and day, and at the rate of about eight changes per minute. The deflection produced was at first 0·17 inch, and this afterwards seems to have diminished to 0·16 inch, but no permanent set was produced. The load was then increased from one-fourth to two-sevenths of the statical breaking weight, nearly 3½ tons, and the number of changes also increased to a million. The deflection was 0·22 inch, after nearly 90,000 changes of load, an amount that afterwards fell to 0·21 inch, and then rose to 0·23 inch, after the beam had undergone 1,000,000 changes of load. The load was then increased "to 10,486 lb., or two-fifths of the breaking weight, and the machinery was again set in motion. With this additional weight the deflections were increased, with a permanent set of 0·5 inch, from 0·23 inch to 0·35 inch, and after sustaining 5,175 changes, the beam broke by tension at a short distance from the middle." It is interesting to notice that none of the rivets were either loosened or broken. The beam was repaired by replacing the angle-irons on each side, and by riveting a patch over the broken plate equal in area to the plate itself. The experiments were then continued with a weight of 3 tons (or one-fourth of the statical breaking weight), and were carried on as before. After the repairs, the beam sustained no less than upwards of 3,000,000 changes of load, with a deflection varying from 0·22 to 0·17 inch, and with an ultimate permanent set of only 0·01 inch. Assuming that the beam could bear to an indefinite time alternate changes of this kind with the 3 tons as above, the load was increased to 4 tons — one-third of the breaking weight. The deflection was thereby increased to 0·20 inch: no permanent set was produced, but, after about 300,000 alternate changes of one-third of the breaking weight (4 tons), the beam "broke by tension across the bottom," a short distance from the centre of the beam, and close to the plate riveted over the previous fracture.

From these experiments Mr. Fairbairn deduces that "wrought-iron girders of ordinary construction are not safe when submitted to violent disturbances equivalent to one-third the weight that would break them,"—with a steady load. It will, however, have been seen that, according to Mr. Fairbairn's experiments, a plate girder shows a wonderful tenacity when undergoing the same treatment with *one-fourth* of this load; "and assuming, therefore, that an iron girder bridge will bear with this load 12,000,000 changes without injury, it is clear that it would require 328 years, at the rate of 100 changes per day, before its security was affected." To risk a load of one-third of the breaking weight upon plate bridges would, Mr. Fairbairn considers, be dangerous, as, according to the last experiment, the beam broke with 313,000 changes, equivalent to a period of eight years, at the rate of 100 changes per day. He appears to ascribe the rapid breaking down of the girder in the last experiment to a previous gradual deterioration of the beam through the three millions of changes to which it

was subjected under the moving load of one-fourth of the breaking weight. It will thus be seen that Mr. Fairbairn considers one-fourth of the statical breaking weight as a safe moving load for a wrought-iron plate girder, or that the factor of safety giving the ratio in which the ultimate strength should exceed the working strain, should be four—a ratio which in practice he would probably be inclined to increase by one-half.

THE POSITION OF THE ART WORKMAN.

ARCHITECTURAL MUSEUM PRIZES.

THE annual meeting of the members of the Architectural Museum, for the distribution of prizes, was held on Tuesday evening last, in the theatre of the South Kensington Museum, on which occasion an address was delivered on the position of art-workmen, by

Mr. A. J. B. Beresford Hope, President. He said that last year he had addressed them on the subject of architectural art as such, apart from architecture in general as an art. He would on the present occasion deal with a topic which it might, perhaps, be said they ought to have handled much earlier. It was a subject that, so to speak, underlaid our whole existence. It treated of the material with which they had to deal in all the work they had to do; and it was, in one word, the position of the art-workman. The reason he had selected that topic was this. Last year, a Commission sat to inquire into the situation of the Royal Academy; before which Commission he had the honour of appearing as a witness specially in connexion with this institution, as one of the art institutions of the country. In the course of his evidence, he made reference to topics of art study which had to do with the pursuits of the Architectural Museum; and, when the report of the Commission was published, he saw with pleasure a paragraph in the following terms:—"We recognise great value in the suggestion first made to us in the evidence of Mr. A. J. B. Beresford Hope, that there should be a class of art-workmen connected with the Royal Academy. Looking to the more intimate connexion with the fine arts of those of a more mechanical character, and the great importance of extending the influence of the former over the latter, we think that workmen of great excellence in metal, stone, wood, and other materials, might properly be distinguished by some medal or certificate of honour, conferred by the Royal Academy; and, in certain special cases, become members of the Academy, at least as associates. Each of these art workmen might properly receive a bronze medal, with the appellation of Royal Academy Medalist." Finding that his opinion had been so well received, he thought it was due to himself and to the cause which he had taken up, to follow it out to its results. The Museum existed for the art-workmen, and he felt there was, therefore, no such proper place to break ground in as there, and no such proper time to speak out as at their annual meeting. He did not hesitate to say that the position of art-workmen was at first sight somewhat anomalous. He spoke to those around him as their friend, with a view to raise their profession from the difficulties and anomalies in which he saw it placed. What had they come to by reason of the prizes offered by the Museum, by the Society of Arts, and by the Wood-carvers' Society, to their very great credit, and by the endorsement of the work so accomplished by the Commission? Why, that there was a class of working artists now in existence who were subject to no obligatory recognised training, and had no absolute position in the art-world; who depended for their remuneration upon weekly payments, and yet from whom were demanded the refinement and the work of artists. That was clearly an anomalous state of things. They had either gone too far, or had not gone far enough. The question, then, was, how without a socialistic revolution were they to put working artists in their proper position, and yet to keep up the commercial balance of matters? How was the present state of things brought about? A sudden demand for art-workmen had been created by the art movement,—the Gothic movement of which Pugin and Barry were the pioneers,—and which had gone on every day outrunning the supply. The sculpturesque art in and out caused a demand which had to be met somehow; and so had grown up a system of taking art on commission, to be carried out by middlemen, under the direction of the architect. He did not seek to cast reproach or blame upon that system; but, like all other systems, it must stand criticism. He should divide the art-workmen into two classes—one the art-workmen to whom no designing at all was committed, such as glass-stainers, potters, and metal-workers; the other, stone-carvers and wood-carvers, men on whom it had more and more become the custom to heap a great deal of designing. There had grown up, and it had been advocated by the pen of an able writer, whose magnificent word-painting carried forward the movement, a taste for Gothic art throughout the country. He alluded to their friend Mr. Ruskin. But he thought that he (Mr. Ruskin), and those who thought with him, went a little too far. They seemed to think that you had only to set an object before the art-workman, and to tell him to carve it, and that it should necessarily come out beautifully and gracefully. That he did not admit. He believed that the perception of the beautiful, on the one hand, and the means of carrying it out on the other, must be given by education. Without education you got clever botches, but only in the case of a few geniuses did you get anything like real satisfaction. The demand for free art had to be met. We were at once to come out with something which was to be a great deal better than anything which had gone before it. This had led to a state of things out of which they might get a great deal of good; but it had landed them in a system of conventional originality made easy. Goths and Greeks alike, it is true, were mere copyists fifteen years ago; but they would now go into a system of easy originality, of gentle invention; and were they to be satisfied to stop there? Had not easy invention fallen into as much imitation as the old thing which it succeeded consisted of before? only it was not the imitation of Mr. Beverley, but of, say, Mr. A. B.'s clever reproduction of the Early French. If they got too natural, they fell back into old paganism: if they got too conventional, they fell into the celery-and-cabbage school. The way to avoid these shoals and quicksands was to educate a class of working artists, and not to leave them merely as art-workmen. Carving had got into the hands of contractors. He did not regret that. There was a great deal of work that should be carried out quickly, and under circumstances which only the capitalist system of the day could meet; but alongside of that there must be the working artist, or they would see no carving in the villages—no carving in the small towns—no carving in farmhouses, or those other places into which they desired that the spirit of art should penetrate. It must come to be understood that there were firms in London that employed artists, and the names of those artists must be given to the world. No doubt the present state of things was a safer and an easier one for the art-workman. Now the capitalists stood the risk; the payment to the workman was secure. If the latter were put forward more prominently, he should be paid by the piece, and much more responsibility would attach to him. Work was not now minutely criticised when it was known that the consequences of the criticism might be visited upon, perhaps, some of the most insignificant of those in the employment of the contractor. The present, therefore, was a safe system: it secured uniform wages for the workmen and a certain amount of uniform criticism for the work performed: it secured peace for the employer and the employed by a high level of smooth mediocre art for the world in general. To make the working artist what he should be, he must, so to speak, work with his name round his neck: he must stand in such a position with the public that his credit would be attached to the work he turned out, and that he would suffer in pocket and in reputation if that work were under par: he must be pressed to stand the good and the bad of the experiment. It was necessary, then, that the working artist should be an educated man. He should undergo a certain training and education: he should obtain certain diplomas before he acquired the right to put his card in his window, and to advertise himself to the world as "John Smith, working artist in wood," or in stone. The haphazard education which was fashionable now-a-days, would not do for such a person. He could not afford to blow hot and cold. If they went in for educated art they must have educated artists. What training then was it necessary to go through in order to become such? There was a great ramification of schools of art through the country, of which the head quarters were at the building in which they were then assembled. They were, however, only schools of design, in which they might also pick up a little modelling. There was no execution in them, and tuition was purely optional. If, however, they could affiliate to the Royal Academy a body of art-prizemen, out of the two elements, something of a solid and satisfactory character might be built up. They had not only the schools, and—as they hoped,—the academy element, but there was also the growth of an artistic feeling among art-workmen tending towards this step; and why should there not be something like the guilds of former days, not created by or dependent upon the State, but dependent upon voluntary association and affiliation to an institution such as the Royal Academy? The schools should not be extinguished, but left to be carried on by a free organization of art-lovers, and not be allowed to remain a mere State department. If art-workmen were prepared to enter into the matter in the way he had suggested, he saw no reason why there should not be a profession of stone-carvers and wood-carvers, as there was a profession of photographers or of dentists, to be followed to the exclusion of any other means of gaining bread. Another step which would be necessary in this movement was this: they should fall back upon the old idea of apprenticeship. A duly qualified carver in wood or stone who had obtained his diploma and his certificate in the art contest, should be allowed to take apprentices. For himself, he saw no reason why they should not have the new profession of working-artist. The artist in marble goes through a regular training and becomes an Academician: why the artist in wood and stone should not be trained and educated, why those who decorated our houses, made our shops cheerful and our churches beautiful, should not be recognised by such an institution as the Royal Academy, he regarded as a mere prejudice of the day. No man could be an artist, except for the barest imitation, without being a scholar. The Architectural Museum formerly offered prizes for historical subjects which required considerable reading, and the system was found not to work as well as could be desired. Now they had started with modern subjects, and they found that the men understood and answered and competed with great credit to themselves. He said, then: let the working artist be a man who gets the bronze medal of the Royal Academy, and who devotes himself to his particular branch of art, as the painter or the sculptor devoted himself to his: let the masters of the schools be paid partly by the Academy and partly by the State,—then the educated man would take his prize if he could—would contend for his diploma and become an artist. He might then either settle in London, engage himself at one of the large establishments, devoting himself to a particular branch of art; or settle in some provincial town, and carve the tombstones or adorn the residences of the neighbourhood; or he might travel circuit, from place to place; but for all this he must first be educated: he must be trained in drawing as well as in handling his tools: he must have lessons from the human model: he must have won his certificate to show that he really is what he professes to be. When all that was done, they would have set up a newer and a higher profession than that of the ordinary artisan, to which any man with a little capital and a love of the beautiful could aspire—a profession not of handicraftsmen merely, but of working artists. In carrying out this plan no detriment would be done to the employer. It was the evil and the bane of those who earned weekly wages that they were apt to set up associations to keep up the price of labour: these led to strikes, and were absolutely antagonistic to any art-feeling at all. The present plan would not work against employers: they would of course look out for the best men; and very likely they would run up the prices; so that the person who would suffer in the end would be the unlucky patron of art; but it would lead to a system of education which would be a reality, and to a development of superiority which they never could hope for now, as, after a little time, the art-prizeman became absorbed in the mass and was forgotten. These were, no doubt, bold views; but he felt that the time had come for speaking out on this important subject; for stating fairly the outside of their demands, and telling the art-workman how far they would have him go; and that the time was coming when no demand of his would be recognised if he did not produce his credentials of industry, education, and competency.

As he had said, the present system was a safer one for the art-workman: he was subject to less competition, to less criticism, to less responsibility: the present system did less to try his learning or to test his originality; but if he came forward as an artist, he must be prepared to stand his trial with his brethren of the same profession, and to abide by the verdict which, without favour, but with justice, would be delivered by the art-lovers of the world. If he passed successfully through that ordeal, he would achieve position—perhaps wealth,—and become an employer of labour himself on the system by which he had himself acquired distinction. If they could make the Architectural Museum the foundation of such a system, he believed they would have done much to create, to spread, and to perpetuate a sympathy and a zeal for true art throughout the country.

The President then proceeded to deliver the prizes which had been awarded.

Wood Carving. (9 Misereres received.)

Prize 1. 20*l.*—Mr. John Seymour, of Tower-lane, Taunton.

Prize 2. 5*l.*—Mr. J. M. Leach, of 1, Newmarket-road, Cambridge.

Prize 3. An extra prize, 1*l.* 1*s.* Mr. Alexander Kenmure, in the employ of Mr. Forsyth, 8, Edward-street, Hampstead-road.

Coloured Decoration.—(15 Casts received.)

Prize 1. 5*l.* 5*s.*—Given by the Ecclesiological Society. Mr. Alfred Hassam, in the employ of Messrs. Heaton, Butler, & Bayne, of New King-street, Covent Garden.

Prize 2. 3*l.* 3*s.*—Given by Mr. Beresford Hope. Mr. Joseph Peploe Wood, of 25, Brown-street, Bryanstone-square

Prize 3. An extra prize of 1*l.* 1*s.* given by the Architectural Museum. Mr. Edward Sherwood, of 25, Brown-street, Bryanstone-square, a nephew and in the employ of Mr. Wood, the second prizeman.

Mr. Ash made some observations from the body of the hall, and the proceedings terminated with a warm vote of thanks to the President, on the motion of Lord John Manners, M.P.

IONA: ITS MONUMENTS AND SACRED REMAINS.

DURING a recent visit to the west of Scotland, I was daily in view of the distant island and cathedral of Icolmkill, or Iona, a place so celebrated during the Middle Ages for its sanctuary, as the burial-place of royal, noble, and holy personages, and so unworthily deserted and neglected by all classes of the eighteenth and nineteenth centuries. Long before the traveller is in sight of Iona, which may be seen far distant across the water, he is compelled to put up with many inconveniences, compared with our modern habits in other parts of the British Isles. The roads are few, narrow, anything but straight or level, rarely repaired, and scarcely a house is to be found where travellers can be accommodated for money; but this deficiency is amply compensated by the hospitality of the inhabitants. A large portion of the Ross of Mull consists of regions mountainous and wild, thinly inhabited, and scantily cultivated. The hills present but little variety, being almost wholly covered with heath or fern, diversified here and there by a clear stream rushing down the steep. These hills are generally composed of large shattered crags of granite. Where the country is not hilly, swamps of peat-bog are abundant, interspersed with small masses of granite rock, sticking up in points or sharp edges, altogether rendering the journey difficult, from the labour of climbing, or cautiously considering where every step may be trodden. Silence and solitude command attention in a district where trees are of rare occurrence: the oak and the elm are strangers, almost unknown in the western isles. Dr. Johnson says, a timber-tree might be exhibited as a show in [that part of] Scotland, with the same novelty as a horse in Venice.

The Ross of Mull granite quarries are all situate at present close to the sea, for the convenience of shipment. To get from one to another by land is at all times difficult, even during the dryest seasons, owing to the want of roads and the vast amount of wet: hence, if weather will permit, the best way is, to navigate in a small boat, coastwise, between a multiplicity of little rocks, at times, with less than a fathom of water. These great stones, or little rocks, unworthy even the name of islets, are so numerous near the shore, and visible or not, according to the tide, as to render it difficult to steer clear of them. The greatest distance between Iona and the larger island of Mull is about a mile, to be ferried across in a small boat, with a couple of rowers; and here, as at all other places in this district, I had some difficulty in getting in and out of the boat, arising from the rugged protuberances of large masses of granite rock, which are generally covered with seaweed, rendered thereby rather slippery, and a false step might have been very mischievous.

Various passages in the early writings of church history seem to infer that Iona, the oldest name of which signified the "Isle of the Druids," was a spot celebrated for its religion from a very remote period, notwithstanding it was situate far from the busy world's increasing sound. In one of the churches established by St. Patrick in Ireland, some time during the latter part of the fourth century, there arose, nearly two centuries afterward, a pious man named Columba, in whose veins flowed royal blood: he resolved to preach the word of God in Scotland; therefore embarked with some of his companions about A.D. 565, and the little missionary band landed safely in Iona, where it found Druids preaching in a temple of rude stones. Conal, the Scotch king, granted the little island to Columba, and from that time it became "the Missionary Isle,"—the light of the western world. From the extreme western points of Mull the east side of Iona may be distinctly seen; and very near the margin of the sea a few of the humblest human dwellings appear, perhaps twenty in number: these constitute the town of Sodor, which, together with the Isle of Man, is a bishop's see. Some tottering walls, handsome crosses, and a host of elaborately-carved gravestones, are all that remain of the cathedral and monastic buildings of that long celebrated isle, which only history and a few ruined edifices show to have once flourished with great renown.

There is good reason to believe, that this far-famed little isle was a sacred spot amongst the Druids and ancient Britons, long befors it received the light of Christianity: it was probably the wide-spread fame of its sanctity which induced Columba and his companions to visit it, according to Venerable Bede, in A.D. 565; when he first came from Ireland, to convert the natives, and ultimately established himself amongst them. Columba must have been a man far in advance of the dark age in which he lived, and may be considered to have introduced letters or literature, as well as Christianity, into that part of Britain: his writings, which are in Latin, were published at Louvain in 1667. This holy man is said to have died in 597. Whatever may have been the precise practice of the institution founded by Columba in Iona, it is not likely to have been on any principle of monastic discipline, because such forms of worship were not established in that part of our country until long after his time. It was probably somewhat of a seminary for the education of the priesthood; a great school of ecclesiastics,—or, what we should now call, a "theological college." Iona was certainly the retreat of learning, and the seminary whence issued those pious monks and laymen, who again revived literature, and propagated Christianity through many kingdoms, during the Gothic ignorance which pervaded Europe after the overthrow of the Roman empire. The introduction of papal rule eventually substituted some order of regular monks everywhere in Europe; and, during many centuries, their noted learning and sanctity procured for them an undisturbed tranquillity. The successors of Columba were afterwards interrupted by the Danes and other ferocious tribes: after this, the place remained deserted for many years, till it was again occupied by a detachment of monks, of the order of St. Benedict, who held it till the general Reformation.

The most interesting architectural remains at Iona are the ruins of the cathedral, a nunnery, some chapels, and a building probably the residence of a bishop or principal. The earliest portion of these buildings is certainly much later than the time of Columba: the chapel of St. Oran is apparently the oldest; and it may, perhaps, be referred to the Saxon or Norman age. The nunnery may be reckoned next as regards antiquity: the arches of both these edifices are semicircular, and probably belong to the twelfth century. The most extensive ruin is that of the church, which is in the form of a cross, surmounted at the intersection of the nave and transept by a square tower. The oldest part of this building is that towards the east, and may probably be assigned to the thirteenth century. The arches are pointed, although the massive shafts of the columns are cylindrical and plain, as is not uncommon in edifices of the later Norman era. There is nothing in the style of architecture of the old buildings at Iona peculiarly worthy of notice more than may be seen in hundreds of instances of monastic ruins throughout the British Isles: in fact, they are of smaller dimensions than the greater number of ruined abbeys and cathedrals in Great Britain. All that remains at Iona affords us another example of the sad waste and demolition of elegant architecture, directly or indirectly resulting from the Reformation; after which immense numbers of sacred edifices were disgracefully suffered to dilapidate, by frigid indifference, or powerful and deliberate robbery, when the public or any individual was at full liberty to carry away the stones for any purpose or pretence whatever.

The numerous elaborately carved gravestones with which this royal cemetery is still crowded, and many vestiges of others, no doubt removed from Iona, which may be seen in the neighbouring isles, are, perhaps, more interesting to a learned antiquary than the roofless walls which abound in the midst of them. These gravestones are much defaced, in consequence of being constantly walked upon by visitors. The mortal remains of not fewer than forty sovereigns of Scotland, from Fergus II. to Macbeth, in 1040; four of Ireland, eight of Norway, and one of France; besides lords of the isles, chieftains of clans, aristocracy, and clergy, are said to have been buried in this blessed isle, in separate enclosures, each of which had, formerly, a Latin or Celtic inscription, denoting to which class of the illustrious dead it was appropriated. These inscriptions are now almost obliterated: many of the tombs are inscribed with a few words, either in the Latin or Celtic languages: some few have dates in Roman character, varying from the twelfth to the sixteenth centuries. The last two Scottish kings, who were buried in Iona, were Duncan I., in 1034, and his murderer, Macbeth, in 1040. These gravestones are arranged in no less than nine distinct rows: they are all more or less ornamented, in a style somewhat peculiar to this part of the country; and the variety of design in the carved work, which is very cleverly composed, is remarkably abundant. No two stones are alike, and in nearly all cases, if the two sides of an individual stone are decorated, there will be a general resemblance between them, notwithstanding the ornament on one side may be totally different in design from that on the other side. The same may be said of the architectural ornaments about the old buildings: there is as much variety in the designs as can reasonably be imagined. All are designed and executed with great freedom, in a bold and effective manner, especially considering the hard and refractory nature of the sandstone in which these works are executed. The quoins, tracery of the doors and windows, carved capitals, and most of the mouldings about these sacred edifices, are wrought in sandstone said to be brought from Carsaig, near the mouth of Loch Buy, on the south side of Mull, where the quarries are still occasionally worked. Many of these ornaments are yet sharp, little weathered, and in excellent condition, although in many instances evidently mutilated by remorseless relic-hunters. Some few of these sandstone decorations are sadly disintegrated, mouldered away and entirely effaced, owing to ignorance or inattention in working and fixing the stones with their planes of lamination vertical, instead of horizontal, as they naturally lay in the quarry, which is indispensably important for the duration of all sandstones, because they are all invariably more or less laminated: and although in some cases it may be rather difficult to determine the bed-way of a sandstone, if it chance to be exposed to weather in a contrary direction, sooner or later nature will certainly show the error, when it is too late for a remedy. These sandstones being very porous, are all more or less covered either with lichens, or green vegetable matter, which, however, contribute to heighten the venerable aspect of the naturally gray stone.

On approaching the cathedral and monastic ruins, the first thing that attracted my notice was the remarkable diversity of materials used in their construction. The walls, or such parts of them as might usually be called "plain ashlar work," in these edifices, are erected with the reddest granite I have ever seen, mixed with streaky dark and light-green jade, or jasper; a small portion of gneiss; a black slaty rock, with here and there, apparently, a little hornblende or basaltic stone. There appears to have been very little labour bestowed on these very hard stones, merely sufficient to knock off the largest protuberances. These different-coloured stones have certainly not been placed in the walls

A REMNANT OF SMITHFIELD.

without thought, judgment, and even good taste, as regards contrasts, or harmony of each tint with its surrounding hues. In no instance did I find two or more blocks of the same material together, so as to present large patches of black, red, or green; but altogether the colours are judiciously arranged, and the whole effect is exceedingly rich and pleasing; especially as the frequent rains, or "Scotch mists," keep the stones almost constantly wet: hence they appear as if polished, and thereby give the colours a deeper hue.

Another unusual feature in these buildings is, that no labour whatever has been bestowed on jointing the coloured stones: they are not even "hammer dressed," and at present, externally, not a trace of mortar can be found in the joints: the walls are all built dry, that is, the stones are piled up without any mortar or other cement in the joints. In building, if the stones tottered one upon another, small fragments were tucked under to steady them, but no working has been attempted. Limestone, and fuel to calcine it, are both scarce in the western isles, especially at Iona; consequently mortar must always have been expensive in such a neighbourhood: this may probably account for their edifices being almost destitute of such material.

On leaving these illustrious relics, it was not without a melancholy emotion that I contemplated the neglected fragments of what had been, during perhaps a thousand years, the most holy and religious structures in the north-west of Europe. It was a sanctified spot of ground, where the good, the great, the powerful, and the regal were alike anxious that their mortal remains should be mingled with this dust. Of this fact, the almost innumerable richly carved and inscribed gravestones tell a mournful tale; something like an inventory narrative of what Westminster Abbey might present if it were deserted and given up to all kinds of destruction for three or four centuries. This is by no means an exaggerated or overdrawn contrast: these two religious establishments were founded about the same date, that in Scotland rather the earlier: they were both used for equally dignified purposes: in one were interred or deposited the royal, noble, and religious personages of South Britain, in the other, unquestionably as many sovereigns, lords, and ecclesiastics of the North: yet, with all this interesting evidence before us, it is extraordinary to observe with what coolness and indifference the greater number of even educated visitors view these venerable relics of a former age of religious enthusiasts.

It may now be useful to say something about the present condition of these interesting remains. This place of sepulture, including well-executed architectural specimens, monuments of the illustrious departed, and all belonging thereto, has been so thoroughly neglected, that even the comparatively few fragments, which now attract so much of the archæologist's notice, cannot long remain in their present positions, unless some careful supervision and reparation be very shortly made to preserve them from further dilapidation, not only from the severe weather, peculiar to this district, but also from injuries unintentionally inflicted by thoughtless visitors. Legally, these ecclesiastical and monumental remains belong to the Lord of the Isles, the present Duke of Argyll, whose ancestors came into possession of the island about the year 1693. But all who have carefully examined and are well acquainted with the particulars and history of these old walls and tombs, must surely entertain the patriotic feeling that they are not merely private property, but decidedly national mementoes, which every true Briton should endeavour to preserve from decay, annihilation, and oblivion. For this purpose, all that is required is a donation from the noble proprietor, a grant from our Government, or an open subscription of about 200*l.* or 300*l.*, to secure these antiquities for at least two or three hundred years.

C. H. SMITH.

A LAST GLANCE AT NORTH SMITHFIELD.

"GOING, going," and soon, before the advance of improvement, the domestic edifices of Old London will be altogether "gone." To preserve a record of some of them is desirable; and here we have a picturesque group of houses and shops which are vanishing before the railway invasion. The block fronts towards Smithfield-bars,—a place of very old date. Along this road have often passed the Knights of St. John of Jerusalem, when they, and their stately buildings near here, were in all their strength and magnificence. Now, however, the once handsome buildings which clustered round St. John's-square have, with the exception of the venerable gateway, almost entirely disappeared.

Although altered, the group of houses engraved indicates considerable antiquity. The framework which remained until lately in some of the windows spoke of the reign of Henry VII. or Henry VIII. When these dwellings are removed, few will be left here older than the Great Fire of 1666.

Many changes have taken place in Smithfield, but none of them of more consequence than will be the advent of the "*iron horse*" on to the site of the once world-famed metropolitan cattle-market, and the completion of the spacious new markets.

In days far remote it was a dismal swamp, along one margin of which passed the city wall, branching from Newgate towards Cripplegate. Next came the gathering together of the multitude on the waste to assist Rahere in laying the foundation of his Norman church. Then was seen the gradual growth of the monastic buildings. Afterwards Henry II. allowed the Black Canons of Bartholomew's to establish a fair, to which, from all parts of England, crowded merchants and handicraftsmen. At about this time the vacant ground became in parts covered with smiths' shops. Plantagenet and Tudor kings and queens have come here with jousting and pageantry. Edward I. and the Black Prince were in Smithfield in great state, after the battle of Cressy; and some years later, when the great King Edward had, as the chroniclers relate, fallen into his second childhood, being infatuated with the charms of Alice Pierce, he brought her to Smithfield in a splendid open car. Sitting by her side, and calling her the "Lady of the Sun," he conducted her to the lists, followed by a train of knights, each leading by the bridle a beautiful palfry, mounted by a gaily-dressed damsel.

Barely to enumerate the chivalric displays

THE NORTH BRITISH AND MERCANTILE INSURANCE OFFICES, THREADNEEDLE-STREET, LONDON.

MR. THOMAS PIPER AND MR. J. E. GOODCHILD, ARCHITECTS.

which have been made here, the duels and trials by ordeal, and other events of the olden time, would occupy much space; for, up to the reigns of Queen Elizabeth and James I., this renowned site was the resort of the royalty and nobility of the land. Drake, Raleigh, and others have knelt here on the cloth of gold before the maiden sovereign; nor has Old Smithfield been wanting in the display of scenes of more tragic import. Amongst these will be remembered the death of Wat Tyler, and the burning and the execution by other means of many who suffered for conscience' sake. Bartholomew Leggate was, in 1611, condemned and executed in Smithfield as a dangerous heretic, and was the last person who perished at the stake in England for his religious opinions; but there were various terrible executions in Smithfield later, for charges of witchcraft, and other supposed offences.

The precincts of St. Bartholomew's must have been a pleasant retreat, with its mulberry-garden and elm and fruit trees. Under the shade of these the scholars of the chief London schools were at seasons wont to assemble for the purpose of discussion and rivalry in the display of knowledge. Then the sale of sheep and oxen was but trifling, compared with the present demand, and the extent of the pens was proportionably small; but the ancient fair had not in Stow's days ceased to be of almost national importance; and most picturesque groups must the London historian have seen in his wanderings here at fair-time. As years passed on, the improvement of the roads, the altered character of manufactures, and other causes, led to the alteration of Bartholomew's Fair from a great trade gathering to an assembly of Londoners for festive purposes and amusement. At length the sports and wonders of the fair, which were witnessed and illustrated by Hogarth, declined, and that which had for many centuries been a valued institution became a scene of confusion and riotous and drunken disorder. Few, therefore, were sorry to hear the last proclamation of the ancient fair made by the City authorities; when the small group of fruit and cake sellers who had assembled according to old custom, were made to move on by the police. Bartholomew's Fair had done its work; and, like the English cross-bows, coats of armour, pack-horses, and a hundred other things, gave way before changed arrangements.

A few years afterwards we heard the last knell of the bell which closed for ever the old Smithfield Cattle-market: like the fair, a time-honoured institution, but which, like the other, had become a nuisance, and unsuited for its purpose; and none regret the change who remember the scenes of confusion which reigned here on market-days,—the loud lowing of oxen, the bleating of ill-used sheep, the barking of dogs, the hoarse voices of drovers, the want of water, and the other miseries of Old Smithfield.

For some years past this place has been in a disgraceful state of neglect; but we may hope now for improvement. Let us urge that in the course of it some thought be given to pent-up City lads, who, during the last three centuries, have been gradually robbed of their play-grounds.

LONDON STREET ARCHITECTURE.

THE NORTH BRITISH AND MERCANTILE INSURANCE OFFICES.

THE Mercantile Insurance Company was formed in consequence of the large additional rates required by the Associated Fire Insurance Companies, after the great fire in Tooley-street, June 22nd, 1861; and, when fairly established, the directors purchased of Messrs. Prescott the site of No. 61, Threadneedle-street, and commenced there the erection of new offices. It having, however, occurred to the parties interested on both sides, that an amalgamation with the North British Fire and Life Insurance Company would be advantageous, that amalgamation was effected, and the associated companies, under the title of the North British and Mercantile, then added to their land by the purchase of the well-known Cock Tavern, and upon the site thus enlarged, the present building, of which we give a view, has been erected by the surveyor to the company, Mr. Thomas Piper, assisted by Mr. J. E. Goodchild. The builders were Messrs. W. Cubitt & Co. The material is Portland stone, varied with blue grey granite, in the ground story, and in the upper stories red granite columns. The building is made fire-proof throughout, with iron and concrete.

The style of architecture is Italian, not following the exact arrangement of any particular building, but adapting the several features of the style to the exigencies of street architecture in our northern climate, thus abandoning the advantage obtained, architecturally, by the solid basements of Italy, for the sake of the improved light required on the ground-story for mercantile purposes. The windows are well recessed, and the front, as a whole, is effective and handsome.

The North British Insurance Company was established in 1809, commenced life business in 1825, and was incorporated by royal charter. It has the co-operation of some of the highest Scottish families. The joint company has obtained the confidence of the public to such an extent, that its total income last year was above 498,000*l.* The paid-up capital of the company is 250,000*l.*, and its realised and invested funds are 2,233,927*l.* The company expect to occupy their new offices in the month of June.*

THE MULREADY COLLECTION IN THE KENSINGTON MUSEUM.

THIS most interesting exhibition, the result of Mulready's art-life, including the portrait of a gentleman when he was about nine years old, architectural sketches, dated 1803, and his last picture still unfinished, has been commented on already at such length by the daily press, that we shall content ourselves with mentioning that it is open, and should be visited by every student and lover of art. 113 paintings, and many hundreds of drawings, show his industry, and tell the whole story of his progress. We are not amongst those who rave of his genius. He was a great draughtsman, and a great colourist; but not a great thinker. His pictures amuse and please: they serve to interest men and women in other men and women (and that is something), but his teaching, with some few exceptions, is but small. Within his own limits, however, he holds one of the highest places.

PRIZES FOR ART WORKMEN.

THE Council of the Society of Arts have published a long list of subjects, for which they offer handsome prizes of money in competition. All specimens must be sent in by the 26th of November. The subjects comprise carvings in marble, stone, and wood; repoussé work, in any metal; hammered work, in iron, brass, or copper; carving in ivory; chasing in bronze; etching and engraving on metal—Niello work; enamel painting on copper or gold; painting on porcelain; decorative painting; inlays in wood (marquetry or buhl), ivory, or metal; cameo-cutting; engraving on glass; wall-mosaics; gem-engraving; die-sinking; glass-blowing; bookbinding and leather work; and embroidery. The list in detail, with the amounts and conditions, may be obtained at the society's house.

AWARD OF PREMIUM BY THE ART-UNION OF LONDON.

THE council of the Art-Union met on Tuesday at the South Kensington Museum, Professor Donaldson in the chair; and proceeded to award their offered premium of 600*l.* for the best statue or group submitted in competition. After successive votings the number of models for choice was reduced to three,—the Wood Nymph, the Lady of the Lake, and Imogen; and ultimately the Wood Nymph was selected. The successful sculptor was found to be Mr. C. B. Birch, of 38, Keppel-street, Russell-square.

The council invite competitors to affix their names to their several works.

The sculptor of Imogen writes:—

"Seeing in your notice of the Art-Union sculpture in the Kensington Museum, the remark that the right arm of Imogen is doubtful, I would submit that I selected this heroine of Shakspeare not only as affording, I thought, a popular subject to meet the desires of the Art Union, but as also taking a point which I am not aware of having seen treated, either in painting or sculpture, *i. e.* a woman's fearful and unaccustomed (and therefore, perhaps, bordering on the awkward) way of drawing a sword (as she throws a stone!). In the rest of the figure I have tried to be graceful, but in this respect I dare say I have somewhat sacrificed grace to expression, and your remark touches this point."

* Part of the building will be occupied by the International Financial Society, established, with a strong direction, to make advances on land with promptitude and small expense.

"FINE ARTS APPLIED TO INDUSTRY."

CANTOR LECTURES.

IN his fourth lecture, devoted to "Iron and Brass," the first point noticed by Mr. Burges was the great employment of bronze in the classical era, it being used for most of the articles that we commonly manufacture in iron. Bronze statues were also numerous, although very liable to be melted down if the persons to whom they were erected became unpopular. Mention was made of the celebrated bronze colossi at Rhodes and Athens, as well as of several other *chefs-d'œuvre* of ancient art. Attention was drawn to the various methods employed in the decoration of bronze statues in the classic times, such as damascening, gilding, and the substitution of silver, ivory, and other substances in the eyes. As regards Mediæval bronzes great stress was laid upon our own series at Westminster Abbey, so much being known of the artists and of their rate of payment; and after noticing the great antiquity of bronze castings in the East, and the great skill of the Japanese in this art, the lecturer referred to the present state of these manufactures in France and England, very little being done in our own country. In France, M. Barbédienne deservedly holds the first rank, for the extreme care displayed in the casting, although some doubt was expressed as to the expediency of copying works in marble by reducing them as bronzes. After describing the Damascened dinanderie produced at Mossul, in the twelfth and thirteenth centuries, and Hart's and Harding's imitations of that of the Middle Ages, the lecturer referred to the prevalent use now made of iron, both wrought and cast; observing that at present we had no very good means of judging whether structures built of this metal were likely to be permanent; and adding that there was very great room for a much more extended application of art to engineering works than had hitherto been made. The ironwork of the twelfth and thirteenth centuries was pointed out as models to be followed in the designs for elaborate works for doors, screens, and other small objects, the ornament being obtained by means of iron stamps, while the practice of the fourteenth and fifteenth centuries, of getting the effect by placing thin perforated plates one behind another, was by no means to be so much approved. A screen, however, executed by Hardman in this manner, and placed in the late exhibition, was mentioned with great praise for its delicate workmanship. Mr. Burges concluded by strongly advocating the application of art to works in cast-iron, and by suggesting several methods whereby this might be decorated. The table presented an interesting show of works.

The fifth lecture (March 7th) treated of "Gold and Silver." Though considerable documentary evidence existed as to the excellence of the antique works in gold and silver, the value of the material has caused an almost complete destruction of the objects themselves, and we have, consequently, but little to learn from this quarter: on the contrary, a comparatively large quantity of Mediæval plate and jewelry has come down to our own day, to say nothing of the numerous and curious inventories so frequently met with; the most instructive of these latter being that of Louis, Count of Anjou, taken somewhere about the year 1360, and which has been published in the work of M. de Laborde, on "The Enamels in the Louvre." The various processes applied to the working of the precious metals in the Middle Ages were then described, and a short list given of the principal vases and ornaments demanded for the decoration of the Church and for secular uses. Much regret was expressed at the want of art education, not only among the workmen, but among the tradesmen themselves; the old silver and gold smiths, such as Cellini, being both tradesmen and artists. The next part of the subject touched upon was jewelry. Great praise was given to the ornaments of the ancient Etruscans, which were literally "jewels of silver and jewels of gold." The higher sort of Mediæval jewelry appears, on the contrary, to have consisted almost entirely of precious stones, only such an amount of metal being used as was necessary to bind them together. The jewelry of the Renaissance formed a third variety, being distinguished by the little figures and ornaments covered with enamel. The lecturer drew attention to the modern revivals of Etruscan work by Signor Castellani, of the Mediæval by Messrs. Hardman & Co., and of the Renaissance by Mr. Hancock and Messrs. Widdowson & Veale. Mr. Green's jewelry was also noted for the good taste

generally displayed. Finally, a few words were added on the coinage and the necessity of a great improvement with regard to that in present use, the example of the Greeks being adduced, whose coins were objects of the highest art, and the dies for which are supposed to have been made by the same artists who engraved gems. The Italian money of Louis XII. was also brought forward as a most excellent example, exhibiting, in its way, nearly as good art as the Greek coins, while it possessed the great advantage of being easily piled—the want which, in the present day, would be considered a great defect in the antique examples. The lecture was illustrated by examples of plate and jewelry.

APPARATUS FOR FIREMEN.

A SIMPLE and apparently effective apparatus has been lately constructed by a Mr. H. Kuhfuss, of Carlsruhe, for the purpose of discovering the whereabouts of the flames in cases where the smoke would prevent a fireman from entering a house in the ordinary manner. Mr. Kuhfuss does away with the mouthpiece and fresh-air pipe hitherto used in these cases. The apparatus consists of a cap made of light material, and covered with a coating of gutta percha: this cap is drawn over the head, a collar of india-rubber fitting it sufficiently tight round the neck to prevent the smoke from entering. Two holes, filled in with glass, admit light, as in a diving apparatus; and in the region of the mouth and nose two cross incisions are made, which are buttoned up, after a sponge, saturated with strong vinegar, has been admitted, entirely covering mouth and nostrils. Experience teaches that the organs of respiration are not affected by the smoke so long as the sponge is kept wet; and a small bottle of vinegar which the fireman takes with him, enables him to moisten the sponge when required. A whistle, attached to the inside of the cap, completes this very simple contrivance.

MIDDLE ROW, HOLBORN, STILL STOPS THE WAY.

THERE are certain metropolitan improvements which are so absolutely necessary that the reason why they have been long delayed is not easily to be understood. Amongst them there are few which present themselves so glaringly, or in such a clear and tangible block, as that in Holborn, which spoils and renders inconvenient one of the most important thoroughfares of the metropolis. To this subject we have often called attention in the *Builder*; and some time since gave a view of the place.

At a meeting of the Metropolitan Board of Works recently, Mr. Hall moved "That the necessary steps be taken for obtaining, if possible, the insertion of a clause in the Holborn Valley Improvement Bill, now before Parliament, for the removal of the houses on the north side of Middle-row, out of the funds proposed to be raised; or, failing that, then to obtain a recommendation from the committee to whom the Bill is referred, for such removal; and that the solicitor be so instructed."

After some discussion, and the substitution of an amendment, the motion was eventually negatived by a majority of twelve to seven. So ridiculous seems the determination to preserve this nuisance, that we cannot but hope that the Board of Works have some special plan in view for its removal. Since then the Board have, we believe, determined on moving in it.

With the exception of London Bridge, this part of Holborn is now the most thronged of the metropolitan thoroughfares, as the following enumeration, taken some time ago by the police, will show:—

Entering the City by	Vehicles.	Passengers in Vehicles.	Foot Passengers.	Total Passengers.
London Bridge	10,129	30,799	54,128	84,927
Holborn Bars	9,000	36,094	41,610	77,708
Aldgate	4,978	12,548	42,547	55,095
Blackfriars Bridge	4,108	7,293	31,642	38,935
Bishopsgate-st	3,461	19,388	34,161	53,549
Finsbury-place	3,451	11,060	27,024	38,084
Minories	2,456	3,571	18,208	21,779
Smithfield-bars	2,439	4,012	24,830	28,842
Whitecross-street	2,305	4,026	24,890	28,916
Temple Bar*	2,159	13,724	36,950	50,674
Aldersgate-street	2,052	4,952	21,060	26,012

* At the time of this enumeration, a portion of Fleet-street was partially stopped; but this would not be sufficient to vary by more than a little over 1,000 the relative extent of traffic of Temple-bar and Holborn-bars.

At London Bridge the traffic has increased of late years to a most enormous extent; and the same is the case as regards Holborn.

Middle-row is certainly neither picturesque nor ornamental. The amount of business carried on on the north side is but trifling, and even that on the other side is not much, and merits no consideration whatever in comparison with the advantages which would result from the removal of this obstruction.

At present Middle-row makes Holborn something like two bottles with one neck. It acts as a stoppage, not only to vehicles going to the City, but also to those coming from it. If this block were removed, and the Holborn-valley levelled, we should, at any rate from Newgate, along Oxford-street to Paddington, have one of the most spacious, convenient, and noble thoroughfares in the metropolis.

VOLUNTARY ARCHITECTURAL EXAMINATION CLASS.

A MEETING of the friends and members of the Architectural Examination Class was held on Tuesday, the 8th inst., at the rooms of the Architectural Association, Conduit-street, to elect new officers and consider the report of the past session.

Mr. T. Roger Smith was voted to the chair.

Mr. Ridge, the late secretary, then handed in the accounts for the past session, and gave some explanation of the method in which the class had been conducted, and hints for the remodelling of the rules. After discussion on these points, the following officers were elected: Mr. T. Blashill, president; Messrs. R. R. Bayne and J. Lemon, vice-presidents; Messrs. F. B. Brooks and R. B. Mather, hon. secretaries.

The opening meeting will be held on the 22nd March; the subject, geometric drawing, to be introduced by Mr. T. M. Rickman.

THE SHAKSPEARE TERCENTENARY.

Commemorative Performances.—A numerous gathering of the managers of the various London theatres took place at the rooms of the National Shakspeare Committee, 120, Pall-mall, on Saturday last, to arrange the time for the performances handsomely promised to be given in aid of the Monument Fund. Mr. Benjamin Webster (Adelphi and St. James's), presided, and the following gentlemen, amongst others, were present:—Mr. J. B. Buckstone (Haymarket), Mr. G. J. Vining (Princess's), Messrs. Shepherd & Anderson (Surrey), Mr. Robert Edgar (Sadler's Wells and National Standard), Messrs. Swanborough (Strand), Messrs. Frampton & Fenton (Victoria), and Mr. S. Lane (Britannia). It was reported that Messrs. E. Falconer & F. B. Chatterton (Drury-lane), and Mr. C. Fechter (Lyceum), would gladly concur in any decision arrived at. After some considerable discussion it was definitively settled that the best time for such performances to take place would be during the weeks commencing Monday, April 18th, and ending Saturday, April 30th, and that they should take place accordingly. It was understood that the performances would, as far as practicable, be Shakspearian performances; and in one or two cases, where they will be given on or very near the night of the 23rd, special and interesting features will be imported into them.

Poetry and Music for the Occasion. In connexion with the tercentenary, the Society for the Encouragement of the Fine Arts offers two gold medals, one for a lyric ode for four voices, and the other for the musical accompaniment thereto.

Ventnor (Isle of Wight).—A committee is now actively engaged in organizing an efficient staff of readers for the tercentenary. Several gentlemen of dramatic talent will take part in the demonstration. The plan of operations extends over three days, namely, the actual birthday of the great bard, the 23rd of April, and the following Monday and Tuesday. On each day there will be Shakspearian readings, interspersed with vocal and instrumental music. A public breakfast on the 23rd, on the successful plan adopted at the marriage of the Prince of Wales, is suggested.

Birkenhead.—At the first meeting of the committee, the question as to the form in which the tercentenary should be celebrated was discussed, and the following suggestions were made by various gentlemen present;—that the opening of the Free Library take place on the day; that a statue of Shakspeare be erected; that there be a procession to the Park, and an oak planted in commemoration of the event; that an entertainment be given to the working classes in the drill-shed; that at an annual dinner a prize be given for the best essay on some Shakspearian subject; that a fund be formed for providing Shakspearian lecturers and readings free to the people; that a sum of money be given for the relief of poor authors and actors; and that there be a public dinner and Shakspearian *soirée* in the Music-hall. Finally the whole subject was referred to the executive committee.

Leeds.—A committee is in course of formation, consisting of a considerable number of the most influential gentlemen of the town and neighbourhood, with a view to arrange for the suitable celebration of the tercentenary in Leeds, and some arrangements of a highly interesting character, according to the local *Intellengencer*, have already been made.

Middlesbro'.—The event is to be celebrated in this town at the Athenæum by a public dinner; and, after meeting in the Odd-fellows' Hall, over which the Mayor will preside, the Burns's Club are to have a supper. A number of working men and others are also to have a supper at the Wellington Hotel.

Glasgow.—The literary societies of the city (of which there are a large number), are about to organise themselves by means of a central union, who, according to the *Athenæum*, intend to seize the occasion of the Shakspeare celebration to hold their first public meeting, and thus inaugurate their labours in the name of Shakspeare. The Shakspeare Committee, which was appointed about a month ago, after a visit from the Mayor of Stratford, is defunct. Glasgow, like all our great towns, will keep its Shakspearian bounties for local objects, though many of its eminent citizens will subscribe to the National Monument in the Green Park.

THE BOARD OF WORKS AND WINDSOR TRADESMEN.

A DEPUTATION from Windsor, headed by the Mayor, have had an interview with the Right Hon. William Cowper, at the Office of Works and Public Buildings, Whitehall-place, in reference to a contemplated change in the mode of conducting the business of the Office of Works at Windsor; the contracts, it has been reported, being intended to be handed over to Messrs. Kelk & Lucas, without competition.

Mr. Cowper having listened to all the observations addressed to him by the deputation on this subject, informed them that they were mistaken in supposing that any determination had been come to in the matter at present, and certainly nothing would be done in it before the close of the present session of Parliament. In the meantime the arguments which he had heard should receive every consideration. The deputation assured him that, if the suggested alteration were carried out, they would feel it their duty to bring the matter before the House of Commons; and that, in the meantime, a question would be asked in the House, so as to prevent that being done in the recess which could not be justified during the sitting of Parliament. The *Windsor Express* states that a similar course is proposed to be adopted with regard to the Royal Palaces in London, as well as those of Claremont, Hampton Court, and Bushey, and that it will meet with a like resistance.

THE BRITISH ARCHÆOLOGICAL ASSOCIATION.

AT a meeting held on the 9th, Dr. Copland in the chair, a large number of objects were shown and described: amongst them Mr. Irvine and Mr. Syer Cuming exhibited claw hammers of iron, of the Elizabethan period, annulated in a very ornamental manner, and inscribed with names. They are presumed to have been in the service of the tapestry hangers or upholders who, from the time of Henry VII., formed part of the royal household. The duty was performed by six yeomen of the guard, who were denominated yeoman hangers.

Mr. Cuming read a paper on Archers' Badges, illustrated by reference to old English writers on archery and by specimens derived from his own collection of arrows, targets, bugles, ornamented buttons, &c. The paper will be printed.

The evening concluded by the reading of a paper, by Mr. Planché, of considerable interest.

t related to an effigy seen by the Association at he late congress upon occasion of their visit to ipon Cathedral. It is that of a knight in complete steel armour, exhibiting the military equipment of the early part of the fifteenth century. he sacred monogram, I. H. S., is sculptured on ie front of the bascinet, like to that of Lord ardolf and others. The head of the knight eposes on a tilting helmet, surmounted by a rest, which has unfortunately suffered injury. Ir. Planché, availing himself of the MSS. collections of Brooke Somerset Herald, has traced ie family of Markenfield, and seems disposed o regard the figure as that of Sir John, son of ir Thomas de Markenfield, who flourished in ie reign of Henry V., to which period the details of the costume in which the effigy is represented decidedly point. It has a collar of unique haracter, giving the representation of a stag, dentical with the seal of the Baileys, of Derby. he stag was, however, a badge of Henry Earl f Lancaster, Hereford, and Derby, afterwards Henry IV., into many particulars regarding hich Mr. Planché entered at length, and they ill appear in the paper, which is to be printed *extenso*.

COMPETITIONS.

Belgium.—The Guild of St. Thomas and St. uke offer 12*l.* (300 francs) for the best design r a village church, Early English in style, and cost not more than 2,600*l.* The conditions ay be had at our office. Our countryman, Mr. ames Weale, Bruges, acts as secretary to the uild.

Macclesfield Town Hall.—Thirty-two sets of esigns were sent in. A certain number were elected, and then Mr. Waterhouse, of Manchester, was called in to assist in the ultimate choice. he plans thus specially considered were a set, alladian, by Mr. Stevens of Manchester; a set, othic, by Mr. Edgar; a set by Mr. Hughes; a alladian design by Mr. Nicholas, of West romwich; a set, Gothic, by Mr. E. Godwin; couple of alternative designs, in the Lombardo-Gothic and Renaissance styles, by Mr. arbyshire, of Manchester; a design by Mr. ravis, somewhat after the fashion of the elgian *hôtels de ville;* a series of drawings y Mr. Burrell, of Longton, the elevation eing in the Italian style; a set of alternative designs, the one in Gothic and the other in Composite style, by Mr. Douglas, of Chester; nd, finally, a design by a young townsman, Mr. Barlow. The architects estimated their buildings at 5,000*l.*, or "thereabouts." The choice at st rested between Mr. Burrell's and Mr. E. odwin's, and was decided in favour of the design by the latter gentleman.

Proposed Ragged Schools, Newport, Monmouth.—a late competition, limited to local architects, e design submitted by Mr. Huncorn, architect, as selected by the sub-committee, by a majority four out of five members.

Hull Protestant Institute.—A limited competion amongst local architects took place, when e design by Mr. William Kerby was accepted. uilding operations are to be commenced forthith.

Driffield Cemetery.—In reply to the advertisement which appeared a short time since, about enty designs were sent in; and the design of essrs. Pritchett & Son, of Darlington, was lected, and is being carried out by them.

Congregational Church, Knaresborough.—Seven signs were sent in for this work; and the sign of Messrs. Pritchett & Son has been lected, and is to be carried into execution by em.

THE GOVERNMENT ANNUITIES BILL.

This measure will be a decided boon to the orking classes; but we regret to observe that terested parties are stirring these classes ainst it. So far as regards sick funds it does t interfere; and neither indeed does it do so rectly with friendly societies in any shape; t the working classes themselves have lost nfidence, to a certain extent, in these societies, d no wonder.

The bill is making progress. Last week, in ening the adjourned debate on the subject, the ancellor of the Exchequer said that the last port of the registrar of friendly societies owed so unsatisfactory a state of these institions, that public attention was directed to the atter, and it appeared to him that it was the ty of the Government to interfere and to amend the law on the subject, by making it operate on a point on which it was now inoperative. He did not lay down that, in the matter of savings' banks, or annuities, or assurances for the people, it was abstractedly the duty of the Government to interpose, but that principle had been admitted in the case of the Post Office Savings' Bank Act which Parliament had passed. It was not proposed to undertake assurance by the Government on any other terms than those on which ordinary insurance offices acted. The proposed bill had grown out of the necessity of dealing with friendly societies, founded as those societies were on error, fraud, and swindling on the most helpless class of the community. By exempting friendly societies from several items of taxation, the Government practically made itself responsible for them; and the form of intervention or remedy now chosen was a simple one, and it was founded on the same principle as that of the Post-office Savings' Banks, that of giving a poor man a certain security for his investments. If the plan was safe and just it ought to be adopted. Taking up friendly societies, he stated that since the Act under which they were enrolled passed, 9,000 of them had failed, inflicting loss on their contributors, while about 100 of them failed every year. He argued against the arrangement in this class of assurances that a single lapse of premium at the exact period voided the policy; whereas in the higher classes of societies such rigid terms did not prevail. In one instance of these societies 18,000 policies had lapsed, and in another 70,000. While deprecating the notion that he was opposed to friendly societies, he pointed out the defects, mismanagement, and insecurity of the great bulk of the existing societies; and concluded by stating that it was to meet this condition of things that the present mild and tentative measure was proposed.

The Government Annuities Bill has our best wishes.

PROPOSED DECORATIONS IN ST. PAUL'S CATHEDRAL.

Sir,—Some remarks have been made on the decorations of St. Paul's, which, by appealing to national and religious feeling, seem likely to check the contributions of the public, and by the prejudice which they may excite against the works about to be executed, seem to be unjust both towards the foreign artists and the committee who have selected them.

A knowledge of the gentlemen comprising the committee might of itself be sufficient to acquit them of any undue partiality to foreigners. But it may be as well to ask what would be the probability of the completion of these works within the present century, if the committee were not at liberty to supplement the efforts of English artists by means of foreign aid?

With regard to the painted windows, it has very properly been admitted that our glass-painters have hitherto distinguished themselves chiefly in works of a Gothic and Mediæval character, which would not harmonize with the architectural style of the cathedral; and the misgiving of their capacity, which this admission implies, cannot fail to be strengthened by an examination of the specimens of native art which have actually been placed in the western windows of the aisles of St. Paul's, as well as by a survey of all the other churches and cathedrals in England. Nor could the objection to English glass-painters be obviated, as has been suggested, by the employment of our best artists to design the cartoons. Where is the evidence that a good artist exists who has sufficiently studied the technicalities of glass-painting to enable him to make a design capable of being executed on glass; or of an English glass-painter who could satisfactorily transfer it to glass?

To assume that improvement may hereafter take place in this art, is obviously beside the question. They must necessarily be preceded by an indefinite number of failures; and it cannot for a moment be thought that St. Paul's is a *corpus vile*, fit to make experiments upon.

No scruple on account of nationality hinders our merchants from going to France for silks, and to Prussia for steel; and there is no reason why a different rule should prevail with regard to articles of *vertu*. Application is made to Germany for a commodity which there is little prospect of procuring at home for painted windows, high in art, excellent in execution, and conceived in a style which, however different from our new fashion in ecclesiastical decoration, will be in accordance with the majestic architecture of St. Paul's,—works which are the ordinary productions of a school perfected by degrees and by the dear-bought experience of more than half a century. The choice of the Munich school of glass-painters makes the selection of a German artist convenient, if not imperative, in order to secure a proper and rapid understanding between the author of the design and the painter on glass.

No doubt there are some strange delusions current in reference to glass-painters. The objection to Professor Schnoor's design as being too pictorial for the proper function of stained glass must excite surprise in those who are familiar with the great glass-paintings of the sixteenth century, such as those at Lichfield and Brussels, at Pont au Demer, Gisors, Argenton, Conches, and numerous other places; and probably connoisseurs will question an assertion that has been made, that most of his designs are tame or trite.

With reference to the mosaics for the apse, surely it is no proof of hostility to British art that a preference has been given to a foreign design, since even in a quarter where such an hostility has been insinuated, there appears to be at least some good ground for the choice; and should any scruples be felt at the decorations of an English Protestant cathedral being executed by foreigners, and presumably Roman Catholic ones, they will doubtless disappear when it is known that Professor Schnoor and M. de Triqueti are Protestants, and that the latter is allied by marriage with England, and reckons among his connexions a nephew who is a rising English artist.

The habit of painters formed by an almost exclusive devotion to easel pictures renders the choice of artists capable of designing works in combination with architectural masses extremely limited. It may be asked of many of the artists whose names have been mentioned as fit to be employed, what have they done, even when working under the most favourable conditions? Would a general competition of artists have led to any other than the result which, experience shows, always attends on such competitions,—that of deep disappointment?

That the committee have undertaken a laborious, and perhaps thankless task, no one will deny; but for that very reason it would seem only fair that they should be permitted to carry out their work in their own way and unmolested, until the public shall have an opportunity of estimating their capacity in the choice of artists by the promised exhibition of the model of the choir. It is this feeling, and a conviction that works of art ought to be judged of by their own merits, and not with reference to the creed or country of the artists, that have prompted me, a humble bystander, to trouble you with the foregoing remarks.

B.

THE GROUND FOR FRESCO PAINTING.

I have read a report in the *Builder* of Mr. Atkinson's paper "On Fresco Painting," and subsequent remarks by several other speakers, on the durability, &c., of fresco painting for mural decoration; also on the qualities of the lime and sand used, with the probable cause of failure in the Houses of Parliament. As I feel much interested in fresco painting, from a conviction that it has not had a fair trial, and am somewhat concerned in the statements of some of the speakers, I venture to offer a few general remarks, especially on the ground-work, as an allusion has been made to the great difficulties and perplexities of the art, and a reference to the melancholy end of the plasterers employed by Messrs. Dyce & Herbert. I don't believe the difficulties are so great as represented, and I speak from experience, for I laid the ground for the *first* picture in the House of Lords, painted by Mr. Dyce, and also for the one at Osborne, by the same artist; and have laid several others since. That there is a great responsibility on the plasterer must be admitted: he ought, therefore, to thoroughly understand the nature of the work, and feel an interest in the proper execution of it; otherwise I don't see how the painter can succeed, and especially if he knows nothing of the ground-work himself; and it can hardly be expected that he should have a practical knowledge of it. It is not sufficient that the plasterer be able to lay his ground on even, and make good joinings: there are many other things to be thought of and known. For instance, the floating or undercoat, may not be adapted for a picture: it may be hard in some

places and absorbent in others. In such cases it would be difficult to get the colours to dry alike: one would dry lighter than the other.

It was said by one gentleman that if lime was used new, it would crack and blister: that is a mistake: it is not being new that causes it to blister and crack, for old lime will crack as well as new. The blisters are caused by the lime not being properly run and passed through a fine sieve; but old lime is much better for all purposes than new.

As regards sand, granite, stone dust, &c., I don't think silver sand is good or proper for fresco painting: it will not make a hard substance, consequently is not durable, and it will not admit of enough being laid on for the painter's purpose without liability to crack.

I would recommend that good well-washed river sand be used of an equal grain, being much better for the purpose, and very much more durable, and I believe it would resist all the injurious effects attributable to the atmosphere. It is my opinion that the difficulties of fresco painting are very much overrated for want of a better acquaintance with the materials used.

JOHN PORTER.

THE "CIBORIUM."

SIR,—As I have already declined continuing my discussion with Mr. Elliott, I will not occupy your valuable space with any remarks upon the way in which that gentleman accuses me of having "misrepresented the author" I quoted, "and the examples selected" from his work, although he knows that I never made the slightest allusion to Mr. Fergusson's *opinion* (except on the question of the *date* of the buildings mentioned), or attempted to "claim" him as on one "side" or the other.* The facts and examples quoted by me may be found exactly as I stated them by any of your readers who will turn to the plans in Mr. Fergusson's book. Neither will I comment upon the fact that in his last letter he entirely shifts his ground, and takes his stand no longer upon the *altar* itself, but on the "*pillared ciborium*" or canopy over it, which has not before been alluded to.

Certainly such an appendage, together with a "fifteenth century screen," must effectually have shut out from the sight of the congregation the bishop on his throne on the bema; but no one, I suppose, imagines that either the "fifteenth century screen," or the "ciborium," with its "pillars" and "cupola," existed when the primitive "apse" or "bema," or "circular recess" (call it what you will), was first erected with its stone seats ranged around it, and the altar in the middle

The *cancelli*, behind which Eusebius proves to us that the altar stood, were probably, as I have said, "low railing;" and the *ciborium* I believe to have been the invention of a later date: but upon this point I shall be glad if you or some of your readers will kindly give me some information. When was the use of the *ciborium* or *baldachin* first introduced? Is there any record of such a thing having ever existed in any cathedral or church in this country? Is there any example of one, except of quite modern date, in France or Germany? Or is it purely a *Romish* appendage to the altar? I can find little or nothing about it in the ordinary text-books.

Apropos of the "Chancel" question, some of your readers may be interested to know that, by the constitutional law of this country, no royal order or injunction is to be considered binding upon the Church unless approved and ratified by convocation. The order, therefore, of 1550, for the destruction of stone altars and stripping of chancels is not the "rule of the Church of England," and cannot invalidate the decree that "chancels shall be as they have been in times past," *i.e.* from time immemorial down to the reign of Edward VI. But all this, of course, will soon be altered; for *Mr. Elliott* is going to "*petition the Legislature*" *on the subject!*

WILLIAM PUTTON.

* It was in search of *architectural data* that I referred to Mr. Fergusson's work, not for *theories* on the *case of the heavens*, or the *government of the early Church*, on which he is of more an "authority" than Mr. Elliott. I did not think it necessary, therefore, to allude to what he says about "the republicanism of the Early Church," the "delegation" of the people being the only "title" to the "office" of presbyter, &c., which is not only so much mere assertion, but is utterly contradicted by the plain statements of the earliest Christian writers. Their extraordinary ignorance and error on such subjects only makes the "facts," *as stated by Mr. Fergusson*, tell the more strongly against Mr. Elliott's theories.—W. P.

SCHOOLS OF ART.

St. Martin's School, Long Acre.—The examiner, Mr. Hart, R.A., has given prizes to twenty-one of the students, and selected eight of the drawings for the National Competition. The following letter speaks for itself:—

"On the 9th was held, in the school-rooms, Castle-street, the annual exhibition of the drawings of the students, amongst which there were several showing great industry and skill; but only two of the students have exhibited drawings of an architectural character,—that of a church, by T. J. Bailey, who has sent four drawings; the other, drawings for a mansion in the Classic style, by Thomas Abbott. It would be well if, before the next exhibition, some person could be found to offer a prize for drawings of a set of apartments suitable for a working man, or for a house that might be built in London suitable for four families, so as to turn the current from labourers' cottages alone. People forget in this day that the London mechanic is one of the most hard-worked of the time.—J. A."

The Lincoln School.—This school, established in February, 1863, was examined for the first time by Mr. Hart, R.A., one of her Majesty's inspectors for art, in February last, and obtained seventeen medals and nine honourable mentions, six being selected for National Competition. The inspector expressed his surprise at the amount of hard work done in the first year, two of the medals being obtained for designs, two for painting from the cast in oil and water-colour, two from drawings and designs of engines, three for shading from the cast, two for foliage from nature, &c. The school numbers more than 120 students, chiefly artisans. A public exhibition and meeting were held on the 3rd and 4th instant, which were well attended, this being the first time the institution had been brought publicly before the town. The great difficulty found is insufficient room.

DESTRUCTION OF AN ANCIENT MONUMENT AT GUERNSEY.

WE hear with great regret, that on the 3rd inst., one of the most ancient monuments of Guernsey, called Druidical, was destroyed. The *Pierre-au-Feés*, or *Roque Magie*, was situate close to the barracks of the Grandes Roques. This stone was not in any one's way, and its intrinsic worth must have been very little. Was there no one to raise a voice in its behalf?

MONUMENTS AND MEMORIALS.

The Welsh Memorial of the late Prince Consort.—It has finally been determined that Mr. John Evan Thomas, sculptor, shall execute this memorial; and that it shall be a statue in Sicilian marble, 7 feet high, exclusive of the plinth, the Prince to be in Royal costume. The design is to be subject to the approval of the Prince of Wales. The statue will be erected on a pedestal of polished mountain limestone, the total height of the structure to be about 20 feet. In order to make the monument one of a national character, so far as regards Wales, it is proposed that a penny subscription be made throughout the principality, and that the statue be erected in Tudor-place, Tenby.

Statue of Her Majesty, at Aberdeen.—The town council of Aberdeen have voted one hundred guineas in aid of the funds for erecting a statue of the Queen in Aberdeen. About 500*l.* have already been subscribed. The work is to be entrusted to a native sculptor, Mr. A. Brodie.

Monument to the late Duke of Athole.—Arrangements are in progress for erecting a monument to the late Duke of Athole by the industrial classes on the Athole estates. It is intended that the memorial should take the form of a cairn of great height on the summit of Craigie-y-Barans.

Monument to the late Mr. Farquharson of Invercauld.—The erection of a monument to the late Mr. Farquharson, of Invercauld, is to be immediately proceeded with. The site on which it is to be erected is a wooded knoll, opposite Mar Lodge; and, as the building is to be about 50 feet in height, it will be distinctly visible all along the valley of the Upper Dee.

Oliver Cromwell.—A marble bust of Oliver Cromwell has just been executed by Mr. Noble, the sculptor, at the desire of Mr. T. B. Potter, of Manchester, for presentation to the Reform Club. The work is founded upon the well-known mask, the miniature in possession of Earl de Grey and Ripon, painted from life by Cooper, and the daguerreotype taken from another miniature by the same artist.

Statue of Schiller.—A bronze statue of Schiller, to be erected at Hamburg, has just been successfully cast at the works of M. Schultz, of that city. The smaller figures and relievos are being executed in marble, by Mr. Julius Lippelt, sculptor.

The Wills Memorial.—The committee of the Wills memorial, at Totnes, have decided the memorial,—consisting of an obelisk, with drinking fountain,—is to be carried out by Messrs. John Easton & Sons, and have accepted their tender for it. It is to be erected at the Plains, Totnes.

FROM SCOTLAND.

Edinburgh.—On the subject of Town Improvement the *Scotsman* has a leading article, in which the opening up of communications and the ventilation of close and crowded parts of the city are urged. The opening of the much-canvassed new street between George IV.'s Bridge and the South Bridge, in front of the Industrial Museum, is specially referred to. The writer also draws renewed attention to the desirability of extending the central avenue of the Meadows, and opening a wide street there. Various other improvements are suggested.

Society of Antiquaries of Scotland.—At the last meeting of this body, a paper by the Rev. James M. Joass, Edderton, entitled, "Two Days' Diggings in Sutherland," was read by Professor J. Y. Simpson. This paper, which was accompanied by pen-and-ink illustrations, gave an account of excavations at Kintradwell, beyond Brora, a district which seems to abound in remains of the early inhabitants. Mr. Joass first investigated an ancient fort surrounded by earthworks, situate on a terrace overhanging the sea. Here he discovered small chambers with domed roofs, formed on the principle of the horizontal arch, and communicating by very narrow passages. Quite in the neighbourhood, a cist, containing bones, was found; and close to it a standing stone, having cut on it one of the symbols peculiar to the pillars on the east coast of Scotland. On a hill not far off, a remarkable example of an underground "eirde-house" was examined, containing two chambers, each about 10 feet long and 4 feet broad. On a lintel in this place some characters resembling runes were noticed. Mr. Joass, in conclusion, described another underground chamber, which he had explored, on the Helmsdale water, and which agreed in character with the one at Kintradwell; also a rath in its neighbourhood, under which an underground chamber was found, which followed the curvation of the upper circle for about 33 feet. Mr. Joseph Robertson said, that from the description of the fort and the remains found in its *débris*, it seemed to be of the same character as some in Orkney, at whose excavations he had assisted. He suggested that search should be made for early ecclesiastical vestiges, as, from the name Kintradwell, there was no doubt that the site had been one dedicated to St. Tridunna, as had been the case at Dumfallandy and Restalrig. Mr. Stuart adverted to the fact that Mr. Rhind had been induced to leave a sum to the society for the purpose of carrying out systematic excavations in this and the neighbouring county of Caithness, where such remains also abounded.

Dundee.—Dr. James Grant, medical superintendent of the Dundee Infirmary, has died from typhus fever. He is the third medical superintendent of that institution who has died from fever within a period of less than seven months. There must evidently be something wrong in the building, fatal to the patients, no doubt, as well as to the medical attendants.

Aberdeen.—For the construction of new Waterworks, there were four estimates, exclusive of another which was held as being not in conformity with the stipulations advertised. The committee decided in favour of Messrs. John Gibb & Co., Aberdeen, the estimate of which firm for the whole works amounted to 103,999*l.* The next lowest to that of Messrs. Gibb was Messrs. Baird & Co., Muchalls, who offered to do the work for 110,000*l.*

A TESTIMONIAL.—On Friday evening, the 4th inst., Mr. C. J. Adams was presented with a testimonial in the form of an inkstand, upon which was inscribed;—"Presented to Charles J. Adams, by a few members of the Architectural Association, on his resignation of the offices of Honorary Treasurer and Secretary, as a small token of their esteem and friendship."

CHURCH-BUILDING NEWS.

...wich.—The church of St. Mary Stoke, ...rich, has been restored and enlarged, and lately re-opened for public worship, after ...ng been in the hands of the builder for ... months. The old plaster has been knocked ...he walls and replaced by a facing of flint, ...the stone work of all the windows has been ...ored. In addition to this, the old brick porch ... been pulled down and re-built in flint and ...; and the entrance of black flint, relieved ... white stone, which meets the eye as the ...churyard is entered, is different from the for... porch. The exterior is now uniform with ...tower, which has not been altered. Formerly ...church consisted merely of a nave and chan... filled with high pews, and covered with a per...licular oak roof, which suffered much mutila... in the time of the Puritans. The pews have ... replaced with benches of stained pine, and ... roof has been restored: the carved angels ...h formed the hammer-beams in the nave, ... which were knocked from their places by ... Parliamentarians, have been replaced. A ...iderable addition to the sitting accommoda... has been made by building a north transept, ...h is in the same style as the older portions ...e church, and the roof of which is a *fac ...le* of that of the nave. About sixty new ...gs are thus provided. The vestry has been ...ilt. A low carved screen divides the chan...rom the nave. The chancel and the space ... the communion rails have been laid with ...con's encaustic tiles, as has also the new ...h. The stone work of the windows is re... ...d. The east window, as well as the three ...r windows in the chancel, is filled with ...ed glass, by Messrs. Ward & Hughes, of ...don. The windows of the nave and transept ...illed with glass of a simpler pattern, every ... containing a text from Scripture running ...onally across. These were executed by Mr. ...Day. A small organ stands in the tower, ...rated from the body of the church by an oak ...en, the west gallery having been taken down ... the tower arch opened up. The plaster ... which the walls were formerly covered in ...interior has been removed, and the church ... been finished with parian cement. The ...ch is warmed by gas stoves. Mr. R. M. ...son, of Ipswich and Norwich, was the archi... for the restoration, and the general builder's ... carpenter's work has been executed by Mr. ...Cuff, of Ipswich. The carving of the roof, ...it, &c., is the work of Mr. Ringham; and ...srs. Stearn & Son, have executed the plum... ...s work. The total cost of the restoration ... been between 1,600*l.* and 1,700*l.* a very ... portion having been contributed by Mr. ...Burrell, of Stoke Park, and the remainder ...d by subscription.

...rborough (*Warwickshire*).—Miss Ryland, of ...ford Hall, has had the old village church ...ed down; and, at her sole expense, is having ...ew building erected. The architect is Mr. ...: Mr. W. Huddleston, of Lincoln, is the ...der: the clerk of the works is Mr. Roome; ...eral foreman, Mr. Taylor. The original con... ...t was for 10,000*l.*, but it is estimated that ... total cost will be at least 15,000*l.* There ... be accommodation for 200 persons. The ... church stands due east and west, upon a ...t eminence overlooking the valley of the ...n, and surrounded by woodland scenery, ...n the midst of which rises the spire of the ...rch, about 150 feet high. The church com...es nave and north and south aisles. The ...th of the nave is 61 feet 6 inches, its width ...eet 6 inches, and the rise to the ridge of the ... 40 feet. Plain open wainscot benches, with ...s, are provided along the nave, and also in ...aisles. The roof is open and of deal, stained ... varnished. Four moulded principals spring ...n eight corbel angels inserted between the ...es, dividing on either side the two aisles ...n the nave: each of these represents some ... of the old Hebrew worship. Two with ...ped hands appear engaged in devotion: two ... in their hands scrolls of music; and the ...r four appear to be playing respectively the ..., violin, guitar, and trumpet. Supported by ...e are eight polished centre shafts of Ipplepen ...ble. Each of the capitals is carved with ...ral foliage. Between these are eight clere... ...y windows, piercing the side-walls over the ...-to roofs of the aisles. On either side of ...n window are polished shafts of Ipplepen, ... in the centre a large one of Verd-antique ...ble. The capitals of the latter are carved ...n floral subjects, amongst which are the vine, rose, Ethiopian lily, and ground-ivy. Those of the side shafts are, primrose, wild rose, columbine, hawthorn, water-lily, shamrock, bramble, and geranium. The arches dividing the aisles from the nave are moulded, the termination labels being carved with natural flowers, including the Chinese primrose, passion-flower, wheat and poppy, lily, rose, and dahlia. The arches are supported by cluster-fluted pillars, marble shafts of Ipplepen and Verd-antique fitting in the flutings. At the eastern end of the nave is the chancel, abounding in carvings, mouldings, and tracery. On either side the chancel-arch is supported by three polished shafts, four out of the six being of Ipplepen, and two of Verd-antique. The capitals are carved with natural foliage and flowers, the two shafts of Verd-antique resting upon corbels carved to represent the currant and maple, resting upon the branches of which are several birds. The shamrock, geranium, thorn, and ivy form the subjects of the capitals. An arch, resting upon triple marble shafts, with carved capitals and mouldings, divides the chancel into two equal parts. The roof of the chancel is circular, divided into panels with moulded ribs, the panels being filled in with tracery. The back wall is pierced with a window, at present temporarily filled in with transparent glass, but it is intended to supply this and two smaller windows in the side-walls with stained glass. On the north side of the chancel is the chapel, in which stands the memorial-stone of the Ryland family. The top is surmounted by a slab of Derbyshire marble, inlaid with ornamental brass. The passage from the chancel into the chapel is through two pointed, moulded, and carved arches, supported by a cluster of polished marble pillars, with carved capitals, to harmonize with the other parts of the buildings. The responds have clusters of pillars of Ipplepen, carved out of one mass of material. A wreath of columbian leaves runs up the arches from the capitals to the point. When the work is finished, the chapel will be lighted by three stained glass windows, with polished columns, and the stone-work carved with natural foliage. The roof of the chapel is pointed—the material of stone, with moulded stone ribs, carved capitals, treble shafts of marble, and corbels representing the trefoil, shamrock, wheat and vine, thorn and thistle. The whole of the carving is the work of Mr. Farmer, of London. Mr. Field, of London, has supplied the marble. Mr. Mears, of Whitechapel, has received an order to supply six bells for the tower, the tenor to weigh 11 cwt.; and Mr. Simmonds, of Warwick, will furnish the clock.

PROVINCIAL NEWS.

Gainsborough (*Lincolnshire*).—The want of good dwelling-houses, from 10*l.* to 20*l.* per year rent, is said to be greatly felt in Gainsborough just now. An attempt to meet this want is about to be made by Goddard, of Lincoln, who purposes building a street, to be called Melville-street, behind Beaumont-street.

Lymington (*Hants*).—A new harbour and dock scheme has been considered at an influential meeting held in the Town-hall. The chair was taken by the Mayor, and a petition to the House of Lords in its favour was numerously signed.

Worthing (*Sussex*).—Prospectuses have been issued for the Sea House Hotel Company. The capital is 30,000*l.*, in shares of 5*l.* each. An arrangement has been made to purchase the freehold and adjoining land, and a great portion of the payment will be taken in shares.——A document, signed by about 170 of the principal tradesmen of the town of Worthing, was read at the recent meeting of the local board of health. The gas was described as being very impure, and possessing very little illuminating power. The chairman said that a medical gentleman had not used gas in his house for some months, in consequence of its injurious effects upon the inmates.

Brighton.—At the recent council meeting, the pavilion committee brought up a series of resolutions to the effect that that portion of the pavilion estate lying between the dome, the parochial offices, and the north gate-house should be appropriated for an assembly-room, and that portion known as the site of Mrs. Fitzherbert's stables was a fit spot for the erection of public baths. The committee's proceedings were confirmed.

Sherborne (*Dorset*).—The Yeatman testimonial committee, at a recent meeting, accepted the tender of Mr. Down, of 1,720*l.*, for the centre and one wing of the projected hospital. Possession of the site is to be obtained and vested in the names of the trustees of the hospital.

Pershore (*Worcestershire*).—The new town-hall, on land adjoining the Co-operative Stores, High-street, will shortly be commenced by the contractors, Messrs. C. Coombe and E. Smith & Sons, of this town, who have engaged to do the work according to the plan, &c., for 435*l.* The basement of the building consists of a large room for stowing goods, &c., over which will be a hall, 61 feet long and 27 feet wide, suitable for public meetings, lectures, concerts, &c.

Bristol.—A London contractor has taken from Sir Greville Smyth 150 acres of the Leigh woods, Clifton, for building sites, at a rate of 15*l.* per annum the acre. The site will be opened by the chain bridge, which will be finished in November: all the chains are already fixed.

Cann House, Tamerton (*near Plymouth*).—This mansion (the property of Mr. M. S. Grigg, the old house having been entirely destroyed by fire some eighteen months ago) is rapidly proceeding towards completion, from the designs of Mr. W. H. Reid, of Plymouth, architect. The style is Gothic. The material of the walls is blue limestone, with granite and Portland stone dressings. The roofs are covered with Staffordshire red and black tiles, which give the building a warm appearance. This sort of covering is quite new in this neighbourhood. The stairs are of oak, with a hammer-beam open oak roof over. The entrance-hall and other principal rooms are also to be finished well. Messrs. Call & Pethick are the contractors, and Mr. Dale the clerk of works.

Birkenhead.—Mr. William Cole, of Birkenhead, architect, has written to the local Dock Board, reminding them, that some eight or ten years since, a scheme, patented by Messrs. Cole & Holt, for preventing and removing deposits in tidal basins, by means of artificial springs on the floors of the basins, was laid before the then Dock Board. Mr. Cole proposes a modification of the principle of this patent at the tidal basin, in conjunction with the present sluices.

Chorlton.—The Chorlton Board of Guardians have decided to apply to the Poor-law Board for powers to erect a new hospital, at an estimated expense of 17,000*l.*

Bradford.—A new Eye and Ear Hospital is about to be erected in Bradford, on a site fronting into Hallfield-road, Manningham-lane. In the new building, accommodation will be provided for eighteen in-door patients, with suitable day-rooms, bath-rooms, and dormitories, the latter giving a cubical space of 1,500 feet to each patient, and with requisite convenience for regulating the admission of light into the apartments. An out-door department is also arranged, distinct from the in-door, and with waiting-rooms, consultation-room, ophthalmoscopic-room, and dispensary, and with separate ingress and egress complete. A large room is also provided for the meetings of the Board. Externally, the building is Gothic in design. Tenders for the works have been obtained, amounting to 3,600*l.*; and the total cost, including land, boundary-walls, and professional charges, is 5,200*l.* The architects engaged are Messrs. Lockwood & Mawson, of London and Bradford.

York.—The corporation are taking preliminary steps towards erecting a covered market in this city. The sites considered most eligible are in King's-square; the Pavement, including the White Swan Hotel, the *York Herald* office, and adjoining premises; Davygate; and Parliament-street to Christ Church. The Colliergate site is the most expensive, the rental amounting to above 700*l.* per annum; the rents from property situate on the remaining three schemes averaging about 500*l.* each site.

Leeds.—Some alterations are to be made at the Town-hall. Galleries are being erected in the Civil Court, and immediately after the next borough sessions that court will be permanently fitted up for *nisi prius* business. At the same time the Crown Court will undergo some slight changes. The suite of rooms on the basement at the south-east corner of the Town-hall at present used by the inspector of weights and measures, &c., are to be converted into police-offices; and the present police-offices, on the west side of the building, will be converted into cells for assize purposes. At present, on each side of the front steps of the hall, there is a large pedestal. Operations are now going on for the purpose of having two of these pedestals, instead of one, on each side of the principal front. On the top of each there will be a pillar

and a cluster of lamps. Iron rails and a gate will extend from the end of one pedestal to the other, forming a yard, through which the entrance to the police-offices will be gained.

Sheffield.—A project is on foot for the widening of Lady's Bridge. A committee has decided to widen the bridge to the extent of 60 feet on the Nursery-street side. The causeway on the Blonk-street side is to be made 10 feet wide, the carriage-road 35 feet wide, and the causeway on the Nursery-street side 15 feet wide. Convenient turns will be made at each end of the bridge, one into Bridge-street, and the other into Nursery-street, the buildings at these two corners being taken down for the purpose. Mr. Gainsford, architect, has been employed to prepare plans. The sum of 1,250*l.* has already been raised towards the project.

Beamish (*Durham*). — Mr. John Eden, of Beamish Park, has built and endowed eleven almhouses, at a cost of 12,000*l.*, which are now all occupied by old workpeople, who have been for a long number of years employed on the Beamish estate. The almhouses, says the *Gateshead Observer*, are built in the Elizabethan style, and are constructed of stone of the finest ashlar work, the timber being oak of the best quality, no expense having been spared in their erection. Each dwelling is self-contained, and consists of sitting-room, bed-room, kitchen, pantry, and every convenience for the comfort of the inmates. The building stands upon a lawn fronting the Pelton-road, near the east entrance to the park, and about two miles from the hall. It is called the Methold Almshouses.

RECENT PATENTS CONNECTED WITH BUILDING.*

CONNECTING AND SECURING DOOR AND OTHER KNOBS OR HANDLES TO THEIR SPINDLES.—*T. Parker.* Dated 14th May, 1863.—The patentee takes a spindle screwed from end to end with a suitable screw, the sides being squared down. When fixing the knob on to the spindle, the plate is slid sideways till the spindle revolves in the circular part of the slot, and the knob is screwed as far on as may be required. The plate is then pressed down on the stud until it comes to be concentric to the plate on the knob, when the slot then fits the square on the spindle, and causes the spindle to turn round on moving the knob or handle. The plate may be secured to or prevented from sliding upon the knob by means of a cover plate screwed on the door, or by set screws, or other suitable means.

APPARATUS FOR SAVING FROM DESTRUCTION BY FIRE PERSONS AND PROPERTY IN HOUSES, BUILDINGS, AND SHIPS, &c.—*A. Parker.* A communication. Dated 19th May, 1863.—The patentee fixes in a suitable position tubing or piping, varying in size as may be requisite, according to the size of the building, such tubing or piping bending through the wall where necessary, and being carried up to the roof and along the tie-beam to the king-post, from one end of the roof to the other, such tubing being plain, and stopped at the ends with screw stop ends. From this tubing or piping perforated branches of plain pipe are to proceed, playing water in any direction. The pipes for quenching the fire in the staircases should be connected by branches with the pipe above. A small ring of perforated tubing, fixed on the ceiling with the water brought from above, is sufficient to thoroughly saturate a room in a few seconds. Stop cocks are to be placed in the different parts of this apparatus, so as to prevent a waste of water where it is not required; but these cocks should always be left open in case of emergency. Force-pumps should be fixed in a suitable position, and connected with the main ascending pipe or tubing, to force the water through it. Domestic water-tanks placed high in the building, worked by valves, and connected with the plain pipe in the roof, may be made available for the supply of water to the perforated pipes or tubing in the lower parts of the building; or the supply may be had from the public water main.

WROUGHT-IRON CYLINDERS FOR PIERS OR PILES TO BRIDGES, VIADUCTS, &c. — *H. J. Kennard.* Dated 27th May, 1863.—This invention consists in constructing wrought-iron cylinders for piers or piles to bridges, viaducts, or for other foundations or structures where the sinking of cylinders is required, and they consist of segments having internal flanges fixed or formed upon them for bolting them together, the meeting edges of such segments being planed or turned, so as to form, more or less perfectly, air and water-tight joints.

AN IMPROVED SPRING FASTENING.—*C. Gammon.* Dated 27th May, 1863.—This invention consists in constructing an improved spring fastening, applicable to a variety of purposes, in manner following: that is to say,—on the front end of a spring bolt, such as is used in window sash fastenings, the patentee fixes a spindle, and fits on this spindle a barrel, the outer surface of which is formed with a catch or projection; this barrel carries a spring, and terminates at top in a button or knob, whereby the barrel, and with it the catch, can be partially turned or moved. The remaining part of the fastening consists of a fixed locking plate, the fore end of which is curved, and which, at the end of the curve, has a notch or nick formed in it. When the spring bolt is drawn to make the fastening, the end of the curved plate comes in contact with the projection on the barrel, and causes it to make a partial turn until the projection reaches the notch, when the barrel is forced back, and, at the same time, the catch is engaged into the notch. To open the fastening the catch is turned out of the notch by means of the button, and the bolt pushed clear of the locking plate.

Books Received.

Examples for First Practice in Free-hand Outline Drawing. Designed and adapted by WALTER SMITH, Head Master of the Leeds School of Art. Third Thousand. Leeds: J. W. Bean.

ONE of the best recommendations of this drawing-book for schools and self-instruction is the fact that, although it has not yet been published in London, a new edition of three thousand has already been struck off. It contains no fewer than fifty-six different designs (many of them new), though the price is only two shillings. This is a book well adapted to the wants of those who are anxious to practise drawing by themselves. The first examples are easy enough for a child to begin with, and the last difficult enough to tax the experience gained in the first.

The Year Book of Facts in Science and Art of the Past Year. By JOHN TIMBS, F.S.A. London: Lockwood & Co. 1864.

THIS has long been regarded as a sort of standard work of the kind: indeed, in this country it has no rival. The present issue is quite as valuable a record of progress as any of the previous ones. The frontispiece on the present occasion is a bust of Sir William Armstrong, and there is an accompanying memoir.

VARIORUM.

"PROGRESS of the Art of Building; and A sure Remedy for Smoky Chimneys. Edinburgh: W. P. Nimmo. London: Simpkin, Marshall, & Co., 1864." Of the slight sketch of building progress in this little volume, we need not say much, except that it incidentally shows how sanitary science is now exciting attention in the northern metropolis. With regard to the sure cure of smoky chimneys, it merely consists of the introduction of a tube, *ab extra*, to conduct air from outside, beneath the floor, into the fire, in order to promote the draught of the chimney. There is nothing new in this, however; and it is well known that want of proper ventilation in any room will cause a chimney to smoke, so that doors must be thrown open to afford a sufficiency of air to enable it to "draw;" and the opening of a means of access for fresh air, even though not conducted to the fireplace, will often cure a smoky chimney, although the sole purpose may have been to ventilate the apartment.——"Report upon the Railway Schemes affecting the Borough of Leeds. By E. T. Filliter, C.E., Borough Surveyor." This report has been printed by order of the local council. It contains an account of five new schemes in Parliament, comprising chiefly a through scheme affecting the centre of Leeds, and a suburban scheme affecting its outskirts, with suggested alternatives. The report is accompanied by a good map of the town, with the new projects marked upon it.——"The Battle of the Standards. By John Taylor. London: Longman & Co. 1864." Our readers may recollect a notice in the *Builder* of an ingenious but somewhat crotchety book called "The Great Pyramid: why was it built?" The pr sent volume is based upon the same ideas, an professes to show that our inch measure is ancient Egyptian origin, and was known to th builders of the Great Pyramid as an integr fraction of the earth's circumference,—so exac was their knowlenge of that circumference; although Mr. Taylor blows cold as well as h upon their geometrical knowledge; for h says, "We can hardly imagine that th founders of the Great Pyramid were able t determine the angle of the face of such pyramid with quite as much accuracy as i might be done at the present time." Neverthe less, the dimensions of the pyramid itself are al supposed to have exact relationships to the pre cise dimensions of the earth; and so muc ingenuity and skill are displayed in working ou his crotchets, that Mr. Taylor seems to hav gained the ear and goodwill of Sir John Herschel who, though adverting, in the *Athenæum*, to the er rors and confusion which they involve, still speak both respectfully and favourably of the author' views, which certainly are curious and entertainin to such as take an interest in such subjects.—— "Our Colonies. By John Plummer. London Tweedie, Strand, 1864." Mr. Plummer, late a factory operative at Kettering, but now a writer for the newspaper press, is very well known t our readers as the able author of various essays and other literary works. He has been for many years both crippled and deaf; but probably t these very defects he owes the unusual cultiva tion of the reflective faculties in one of his posi tion in life. He is a clear and sensible writer and his essays have earned the first prizes fo which some of them have been written. Such is the case in the present instance. In opposition to writers, such as Professor Goldwin Smith, who throw doubts on the utility of our colonies to the mother country, Mr. Plummer stoutly upholds their immense importance, especially to the work ing classes; and he is certainly right. The political independence of the colonies, however, appears to be a separate question. Even the United States have till now been of great importance to the working classes of this country, and these States will in all probability continue to be so. Canada and Australia would not cease to constitute useful and important fields for emigration to our surplus population, even though the mother country were to cast them off as colonies or dependencies. And why should they remain for ever in leading strings? They resemble children growing or grown; and, if mature enough to do for themselves, why should not they do so? It is possession, however, which Mr. Plummer most highly values for behoof of his brethren at home; and, although one or two of our colonies may be now "of age," and able to do for themselves, we have others still in non-age, the continued possession of which may be most to our advantage, selfish as the principle would be were not the advantage, in such circumstances, mutual.

Miscellanea.

COPPER.—On the 9th inst. the smelters announced another reduction of 5*l.* per ton, making present rates 103*l.* for tough cake, tile, and ingot; 106*l.* for best selected; and 110*l.* for manufactured.

DECORATIONS FOR THE SULTAN'S NEW PALACE. A Paris letter in the *Independance* of Brussels says:—"The Sultan is now having executed in Paris, by the most eminent sculptors, twenty-four animals,—lions, tigers, elks, horses, and bulls,—destined to ornament the gardens of the splendid palace which is being built at the Sweet Waters. All the animals will be of natural size. Fourteen of them will be cast in bronze, and afterwards undergo a bath of gilding; and ten will be in Carrara marble.

STAFFORDSHIRE POTTERIES STREET-RAILWAY.—At the annual meeting of the shareholders in the company, held at Hanley, the report stated that, during 1863, the company had carried 16,000 passengers in excess of 1862, and that the receipts had increased in the same period by 190*l.*; but the profits, which reached 6 per cent., were not available for the purposes of a dividend, having been absorbed by the partial relaying of the line. One of the directors has since leased the line for five years, with a guarantee of 5 per cent. to the shareholders, and 8 per cent. in case of an extension of the line taking place. He also holds the company free from liability in case of accidents.

Mr. Henry Dangerfield, late surveyor of the borough of Cheltenham, recently died in a lunatic asylum. During the time he was surveyor the system of sewerage by which that town is now served was projected and carried out, and many other useful works were completed.

The Southampton Athenæum. — A correspondent writes,—Have any of your readers ever entered the reading-room of the Southampton Institution? If so, they must have discovered that it is without sufficient ventilation, and is too small for the number of young men who frequent it. My purpose is not to find fault, but to remind the committee that, while the mind is being fed with mental food, the body should not be impaired by poisonous air. More room is undoubtedly required; not only for the purposes of the reading-room, but also for the library, coffee-room, &c., which are all too small, in a sanitary point of view.

Shakspearian Actors.—Miss Glyn has taken the good opinion of the Edinburgh critics by storm. The local press agree that her late performances there have afforded a great and an exceptional treat to those who look upon the drama not simply as a means of amusement, but as a æsthetic study. Her *Duchess of Malfi*, her *Cleopatra*, her *Lady Macbeth*, have all, and perhaps equally, delighted the most discriminating part of her audiences by their fine intelligence, their forcible delineative power, their truth to nature, and their truth to art. One writer says, "Perhaps no series of performances, so strongly marked by all the finest qualities of histrionic talent, has been witnessed on the Edinburgh stage since the days of Mrs. Siddons."

The Birkenhead Docks.—Another extraordinary accident in connexion with the Great Docks works at Birkenhead has just occurred. At high water, the 170 feet of old north wall in the Morpeth Basin, which for some time past had been in a tottering condition, and was preserved from falling by a heavy backing of puddled clay and piling in front, gave way. About 120 feet of the wall fell either forward into the basin or backward into the excavations; whilst, strange to relate, 50 feet of the heavy structure was lifted bodily from the foundations, carried 20 feet across the excavations, and deposited in one upright mass against the granite masonry of the new Morpeth Lock. The gates of this lock were closed, and very fortunately withstood the shock.

London Mortality.—A table has been compiled and laid before Parliament showing the mortality in the several districts of England in each of ten years 1851-61. For all England and Wales the average mortality during that time was 2,217 per 100,000 living, or, as it is more commonly expressed, 22·17 per 1,000. In the Scarborough district in the South, and in Belsham and Rothbury in the North (Northumberland), the annual mortality averaged less than 14 in the 1,000. The metropolitan returns give the following results, beginning with the city proper, then taking the surrounding districts, and lastly the more suburban parts. The returns are now corrected by distributing proportionally the deaths in hospitals, and corrected also for deaths in workhouses situate out of the districts to which they belong. In London city (within the walls) the average annual mortality in the ten years was at the rate of 2,222 to every 100,000 persons living; East London (which, like the next district, is part of the city without the walls), 2,762; West London, 2,705; St. Luke's, Old-street, 2,736; Holborn, 2,411; Strand, 2,456; St. Giles's, 2,846; St. Martin's-in-the-Fields, 2,345; Westminster, 2,231; St. James's, Westminster, 2,290; St. George's, Hanover-square, 1,891; Marylebone, 2,094; St. Pancras, 2,232; Islington, 2,095; Hackenwell, 2,309; Shoreditch, 2,421; Bethnal-green, 2,352; Whitechapel, 2,841; St. George's-in-the-East, 2,879; Stepney, Limehouse, and Mile-end, 2,553; St. Saviour's and St. Olave's, Southwark, 2,863; Bermondsey, 2,638; Rotherhithe, 2,527; St. George's, Southwark, 2,744; Lambeth (including Kennington, Brixton, &c.), 2,353. In the suburbs the mortality in Kensington (with Paddington, Chelsea, and Fulham), was 1,985; Chelsea, 2,615; Hampstead, 1,760; Hackney, Stamford-hill, and Stoke Newington, 1,880; Poplar, Stepney, and Bromley, 2,359; Greenwich, Deptford, Woolwich, 2,449; Lewisham, Plumstead, 1,787; Camberwell and Peckham, 2,319; Wandsworth, Battersea, Streatham, and Clapham, 2,194. For the metropolis generally, suburban and all, the ratio was 2,363.

South Kensington Museum. — During the week ending 12th of March, the visitors numbered 12,323.

Schools of Art.—The following have been appointed the select committee on schools of art:—Sir S. Northcote, Mr. Lowe, Mr. Adderley, Mr. E. Egerton, Mr. Tite, Mr. W. Ewart, Mr. Bazley, Mr. Trefusis, Mr. Cave, Mr. Maguire, Mr. Gregson, Mr. A. Mills, Mr. C. Ewing, and Mr. Potter.

Corn Exchanges.—The project of a new corn market at Hexham has had a successful issue. Mr. Beaumont, the lord of the manor, has granted a site for the building, opening a road to the west through the grounds of the old abbey. The shares subscribed for now amount to 5,025*l.*, and a board of directors has been elected.——There is a prospect of a corn exchange being built at St. Ives. A site has been chosen, and the buildings purchased. The position is central, and close to the spot where the corn market is now held. A few more shares remain to be taken.

Liverpool Architectural and Archæological Society.—At the twelfth meeting of the session, held on the 9th instant, the president, Mr. Weightman, paid a tribute of respect to the memory of the late Sir William Brown. There was afterwards a discussion on the town council's action as to the high-level bridge scheme, which scheme was approved by Mr. Kilpin, and condemned by Mr. Boult and Mr. Picton, both of whom said that it was a mistake to suppose that the Society now advocated that measure because a report of the Society ten years old did so.

Dwellings of the Labouring Classes.—The council of the Society of Arts have passed the following resolutions:—

"That a conference of the Society be summoned to consider the causes of the present unsatisfactory condition of the dwellings of the labouring classes, and whether there are any remedies which can be advantageously adopted.

That, besides inviting the attendance of any members of the Society taking an interest in the subject, the co-operation of such as are members of the Legislature, as well as of the presidents of the Institutions in union, be especially requested."

A committee has been appointed to arrange the conference.

Dwellings in "Bonnie Dundee."—In a discussion on overcrowding in lodging-houses which recently took place at a meeting of the Dundee police commission, a dwelling was thus described by Mr. O'Farrell, who we learn has been long known as working laboriously among the poor of the burgh:—"In that room of 5 feet in height, not much larger than an ordinary boiler, four individuals were lodged; and it was from these places that disease and contagion took its flight. He recollected that at the time cholera was raging here, they had an order from her Majesty's Private Secretary to the effect that the commissioners had power to close up any house that was not 6½ feet in height. He thought, therefore, that they surely had power to close up this place, which was a mere lumber garret, hardly large enough to hold a chest. It was a disgraceful, a degrading, a horrible thing to see four human beings lodged in such a place. This garret was sub-let by the person who had taken the other part of the house, so that it really was a lodging-house." The provost said it was, no doubt, a deplorable state of things, but their powers under the present Police Act were very limited.

Gas.—For the proposed new gasworks, at Thatcham, the parties selected to tender were the six undermentioned firms:—The British and Foreign Gas Generating Company, London; Mr. Balfour, of London; Mr. Bower, of St. Neots, Newbury; Messrs. Plenty & Pain, and Mr. Hague, Newbury; and Mr. G. Stevenson, of Wantage. The several tenders were opened, and the two lowest were those of Mr. Bower and Mr. Balfour. Mr. Bower's tender was most in favour with the directors; but, inasmuch as his and some of the other tenders did not include the whole of the works, it was thought necessary to adjourn the meeting, in order to allow the entire works to be tendered for in one sum.——At the fifth annual meeting of the Howden Gas Company the report of the directors was unanimously adopted, and a dividend declared of 8s. 6d. per share, being at the rate of 6 per cent. ——The general half-yearly meeting of the Croydon Gas Company has been held. A dividend was declared of 7½ per cent. for the half-year ending Christmas, 1863, together with a bonus of 2s. on each of the old shares. Mr. Lambert was elected a director.

A Party-wall Question: Bringing down a House by removing Earth.—A special jury case, Murchin *v.* Black, came on recently at the Cumberland Spring Assizes (Nisi Prius Court), held at Carlisle. Plaintiff and defendant had become purchasers of adjoining houses, which were to be rebuilt in a certain style of elevation, the wall between the lots to be a party-wall, to be erected at the cost of both parties using it. The plaintiff, however, built upon the old wall, with the approval of the vendor, on an express agreement to rebuild within six years should the vendor require him to do so. The defendant afterwards set about rebuilding on his lot, and dug the earth out up to the old wall, which gave way, and brought down plaintiff's house, after defendant, however, had at length been induced to make some attempt to prevent the fall. Counsel for defendant said the case was "bristling with points of law, many of them exceedingly nice and difficult, and it must some day or other assume the form of a special case;" and at his suggestion, acceded to by the opposite counsel, a verdict was taken *pro formâ* for the plaintiff, subject to a special case, to be submitted to the Court of Common Pleas.

Dwellings of the Poor in Shoreditch.—An inquest was lately held by Mr. Humphreys, at Shoreditch, touching the death of Ellen Keneale, aged one year and three months. The evidence in this case brought under notice the painful state of things which exists with regard to the habitations of the poorer classes in a part of Shoreditch. Deceased lived at No. 26, Harris's-buildings, Union-gardens, Shoreditch. The medical man who was called in after death could not account for the fatality, but he said the state of the place was such that the want of oxygen would cause asphyxia, and so death, if the child had been debilitated. Mr. F. G. Gant, F.R.C.S., pathological anatomist to the Royal Free Hospital, said he had made a post-mortem examination of the body. The congested state of the lungs and veins proved that the child died from asphyxia, resulting from the failure of the supply of arterial blood from the heart. He inspected the premises. He found the place undrained and unpaved. There were green stuff and water lying about the yard. One water-closet had to serve for several houses. The smell that would arise from the yard would be most prejudicial to health. The supply of water was deficient. The jury returned a verdict, "That deceased died from asphyxia from natural causes," and they requested that the coroner would call the attention of the landlord of Harris's-buildings to the danger to the public health arising from the state of the premises, the want of a proper supply of water and of a requisite number of privies, and the unpaved state of the yard.

Improvements at Guildhall.—A committee of the court of common council, to whom the subject had been referred for consideration, have reported in favour of a series of extensive improvements in and about the neighbourhood of Guildhall, involving the entire reconstruction on a new plan of most, if not all, of the offices of the corporation, so as to adapt them the better to the general business purposes of the civic authorities, and to obviate the necessity of a large expenditure on every public occasion for special entertainments or otherwise. They find that the area of Guildhall might with great advantage be extended, and the hall itself spared, by taking in the space occupied by the bankruptcy court, and some other adjacent buildings. The report has been adopted by the court of common council, and referred back to them for execution. In the meantime, the existing roof of Guildhall is being replaced by an open one, in accordance with the architecture of the building, and after plans designed by the late Mr. Bunning. The stone front of the hall, being in a crippled and defective state, owing to its imperfect foundation, is also undergoing repair. The new roof will be of oak, filled in with Gothic tracery and partially glazed, and Gothic windows will be substituted in lieu of the sixteen Roman windows on the north and south sides of the hall. The new roof and windows are estimated to cost 18,000*l.*; the rebuilding the front of the hall, 1,500*l.*; the adapting rooms for the purposes of the library, 2,300*l.*; the repairing and decorating the various law courts, 2,000*l.*; and the painting other parts of the buildings connected with Guildhall, 400*l.*; making in all 24,200*l.* The contract for the principal works is being executed by Messrs. Myers.

IMPROVEMENT OF COCKERMOUTH.—The Local Board of Cockermouth have instructed Mr. John Lawson, C.E., of London, to examine and report upon proposed works of water-supply and sewerage for their district.

THE IMPROVED DWELLINGS MOVEMENT.—A society for the erection of improved dwelling-houses, with a capital of 10,000*l.*, in shares of 1*l.* each, has been formed at Hawick, in Roxburghshire, Scotland.

THE MALTA EXHIBITION.—The directors are anxious to obtain for this exhibition, on loan, some articles likely to be adopted by Maltese artisans, and which could improve and facilitate their works; amongst others, tools for carpenters, blacksmiths, &c.; materials used for staining and varnishing wood, planing instruments for smoothing the surface of soft stone, and trowels for plastering walls. The Society of Arts are seeking to obtain a collection of such appliances to send out.

TELEGRAPHIC.—A despatch by telegraph has been received from Sir Charles Bright in the Persian Gulf, dated the 9th of February, which was transmitted through the first section of the new Indian cable. The contents of the first two cable-vessels had been successfully paid out—about 450 miles. The cable was in perfect order, working well. Two other vessels had arrived at Bombay, and the expedition would continue paying out the line towards Europe in a fortnight.

THE ARTESIAN WELL, AT THE HOLMES, DONCASTER.—The town council recently met in committee, to receive a communication from Mr. Dale relative to the boring in the Holmes for an artesian well. The pipes which had been put down the bore, it appeared, had been broken up so that to continue the work, new ones were required. The committee, after taking Mr. Dale's opinion, agreed that an additional sum should be voted to Mr. Clark, the contractor, to enable him to put in pipes of greater strength under his present contract; and that Mr. Dale should be empowered to treat with the contractor as to the sum to be paid for replacing with new pipes those already put in under former contracts.

LONDON GENERAL OMNIBUS COMPANY.—The report of the directors of this company states that the net profit of the half-year, after allowing for the reduction in valuation of horse stock, amounted to 24,107*l.* against 48,214*l.* in the same half of 1862, and 13,004*l.* in the same half of 1861. The number of passengers carried during the half-year was 20,592,544: the number of miles run was 6,004,782: the average number of omnibuses working daily was 583; and the average number of horses working daily 6,189. The average receipts were 1s. per mile: the average fare per passenger was 3½*d.*; and the gross earnings per omnibus per day were 2*l.* 16s. 6d. The available balance left, after adding 6,905*l.* to the reserve fund, was 15,351*l.*, out of which the directors recommended a dividend at the rate of 5 per cent. per annum, free of income-tax, payable on the 22nd instant.

TENDERS.

For erecting the new West London Union, Upper Holloway. Messrs. Searle, Son, & Yelf, architects. Quantities supplied by Messrs. Arding & Bond, and Mr. James Barnett:—

	Extra for Malm Facings to Fronts.					
Anley	£32,312	0	0	... £785	0	0

Ink-stains on Ivory.—A young architect wishes some one to inform him what is the best mode to take ink-stains out of ivory.

We are compelled to decline pointing out books and giving addresses.

All statements of facts, lists of tenders, &c., must be accompanied by the name and address of the sender; not necessarily for publication.

GOOD FRIDAY.—*"The Builder" for the week ending MARCH 26th will be published at TWO o'clock,* P.M., *on THURSDAY next, the 24th inst.*

ADVERTISEMENTS intended for insertion in that issue must therefore reach the Office BEFORE FIVE O'CLOCK, P.M., on WEDNESDAY, the 23rd INSTANT.

In Cloth Boards, 5s.

ANOTHER BLOW for LIFE.
By GEORGE GODWIN, F.R.S.
Assisted by Mr J. BROWN.
With 41 Illustrations.

"Let it be remembered that these are no fancy sketches: read in a work of fiction they might be rejected as exaggerations if not inventions. There is no pet place pictured or described which Mr Godwin has not previously inspected. The names and dates are continually given. He does not ask his readers to accompany him and share the perils he has braved and often encountered; but he does ask them to ponder over these frightful details, and aid him to accomplish the diminution of evils, the very thought of which is appalling to an enlightened and Christian people. Notwithstanding the awful nature of his theme, he has made his book interesting. It is full of illustrative anecdote. While there is no pretence in the style, no semblance of fine writing, it is the production of a scholar and a gentleman, deeply anxious to have his views known and adopted, but bearing in mind that a degree of refinement may strengthen and not weaken forcible language and energetic thought."—*Art Journal.*

"The author deserves honour for the persevering and indomitable energy with which he has surveyed the field he has chosen, and in which he has faithfully chronicled all those material details and facts which are the inevitable concomitants of moral decadence; and we hope his book will fall into the thankful hands of every thinking man, and secure the too frequent fate of books chronicling daring adventure within walls some unpleasantly between the wind and our nobility."—*The Reader.*

"If Mr. Godwin's readers contemplate his dark pictures with pain, the feeling ought to enliven a sense of gratitude to him who, with a Howard like courage, has encountered contact with so much misery and infection; and those who are pleased with the means ought to experience pleasure in seeing such a sphere opened for their humane exertion. While he instigates them to activity, and indicates the direction in which the Legislature may act with advantage, he points out the cheap rate at which the habits of the poor may be improved, by encouraging in them a taste for cultivating flowers, and how the decoration even of their windows and roofs with the loveliest gifts of nature may wean them from degrading pursuits, imbue them with love for domestic industry, and make them sensible that there is a comfort in cleanliness, prosperity, and order."—*Morning Post.*

"Those who wish to become informed upon one of the most important social problems of the day, should possess this startling and attractive volume."—*Standard Morning.*

"Vivid descriptions and practical good sense characterise the present, as they have done Mr. Godwin's earlier works."—*Public Opinion.*

"For many years Mr Godwin has laboured earnestly in the cause of cleanliness and fresh air, and though hitherto he has been unable to bring about any marked improvement, he still perseveres in his apparently hopeless task, trusting that, as 'evil is wrought by want of thought, as well as by want of a rt,' he may at length be rewarded by seeing some of his readers 'brought to thought, and so led to action, by the statements in his little book.' He only asks with 'solemn earnestness for a little attention to the miserable state of things set forth, and for as much aid as can be obtained to effect an improvement.'"—*Athenæum.*

"The present volume is a monument of Mr. Godwin's philanthropy, practical diligence, and skill."—*Morning Advertiser.*

"There are few men out of the profession of medicine to whom our vast manufacturing towns and large provincial cities are more indebted for their more recent sanitary improvements in respect of dwellings, and better supply of fresh light, and water, than to the influential pen of the editor of the *Builder*. We do him no more than justice when we say that to his exertions the public is very largely indebted."—*Lancet.*

"This is a capital book, in spite of its odd title, and the occasional vehemence into which the writer is betrayed. Mr. Godwin's knowledge and experience in matters of sanitary detail, added to a literary ability as rare as it is of the very best 'special' newspapers extant, qualify him to speak authoritative y on the subjects with which he deals."—*Medical Times and Gazette.*

"'Another Blow for Life,' graphically and truthfully—too truthfully, alas—shows how life is shortened, health deprecated, happiness prevented, and crime increased, by the neglect of those sanitary measures which receive so little attention, but are yet of such vital importance. Mr. Godwin is no theorist; he wants scenes of dirt and disease for himself, and places them in all their hideous nakedness before his readers."—*City Press.*

"Un ouvrage très sérieux vient de paraître à Londres sous ce titre: *Un nouvel Effort pour la Vie* (Another Blow for Life). Ses auteurs sont M. George Godwin, rédacteur en chef d'une revue spéciale, le *Builder*, et M. Brown. Cette publication contient des détails déplorables sur les bouges infects dans lesquels les enfants s'étiolent et meurent. Certaines paroisses (*parts of it*) exercent une influence meurtrière sur la population de Londres. Un seul chiffre suffira pour faire apprécier ce fait. Sur 20,000 décès annuellement constatés, on compte 21,000 enfants morts avant l'âge de cinq ans."—*La Paya.*

"This book is evidently inspired by the truest and most rational benevolence." ... "The way in which life is shortened, health deprecated, happiness prevented; how the manners are degraded, and crime and sorrow increased, it has been Mr. Godwin's object in this work to demonstrate; and very truthfully and very effectively has he performed his self appointed task."—*The Sun.*

"This is a blow figuratively struck by a philanthropic gentleman, already well known as the champion of the poor and miserable, for the lives of these unhappy beings, who manage to draw their wretched, but painfully, in the fetid dwellings of Whitechapel, Bethnal Green, and Spitalfields, and even in the working dens of brilliant Regent-street, and other gaudy thoroughfares. Let those who only want to know where wretchedness lurks to help it, and let those who shut their eyes and harden their hearts to misery which they know of but will not acknowledge, read his revelations and listen to his appeals ..... Mr. Godwin only wants people to read and to think, and we would add our earnest entreaties to his."—*Illustrated News.*

"He author has described the scenes he has witnessed with singular skill; he book is pleasantly written and profusely illustrated."—*Social Science Review.*

"See for an enumeration of frightful evils, some of which society might do much to cure, a striking little book, called 'Another Blow for Life,' by G. Godwin, F.R.S."—*The Quarterly Review.*

"The author has cast his information and advice into such a form as will be ready to interest all readers of this small book. Though it describes many painful and repulsive things, the volume itself will attract the eye and the mind; first, by the neatness of its outside shape, its binding and printing, as well as by its numerous woodcuts; and, secondly, by the clearness of its argument, and by the vigour of its style. But not even the most forcible writing can hit the imagination like a picture; and forty-one pictures, dispersed through this volume, show the visible abominations of that state of low London, against which Mr. Godwin aims his 'Blow.'"—*The London Review.*

London: W. H. ALLEN & CO. Waterloo-place.

SCHOOLS OF DESIGN.—"The collection of watches shown by Mr. Benson is a large, and at the same time an interesting one, and considerable attention has been paid by the exhibitor to the decoration of the cases. Many of them are extremely elegant in the design, and were the results of prizes offered by Mr. Benson to the pupils of the South Kensington Schools of Design."—*Morning Post*, September, 29, 1862. Chronometer, duplex, lever, horizontal, repeaters, centre seconds, keyless, split seconds, and every description of watch, adapted to all climates. Benson's Illustrated Pamphlet on Watches (free by post for two stamps) contains a short history of watch-making, with prices from 3 to 200 guinea each. It acts as a guide in the purchase of a watch, and enables those who live in any part of the world to select a watch, and have it sent safe by post. Prize Medal and Honourable Mention, Classes 33 and 15.—J. W. Benson, 33 & 34, Ludgate-hill, London. Established 1749. Watch and Clock Maker by Special Warrant of Appointment to H.R.H. the Prince of Wales.—[ADVT.]

THE GENERAL CREDIT & FINANCE COMPANY OF LONDON, LIMITED,

AND

THE LONDON FINANCIAL ASSOCIATION, LIMITED,

INVITE SUBSCRIPTIONS FOR THE CAPITAL OF

The Central Argentine Railway Company, Limited.

FROM ROSARIO TO CORDOVA.

Under Special Concession from the Argentine Government. Incorporated under "The Companies Act, 1862."

CONCESSION IN PERPETUITY.

GOVERNMENT GUARANTEE OF SEVEN PER CENT. PER ANNUM FOR FORTY YEARS. GRANT OF LAND ADJOINING THE RAILWAY.
INTEREST AT SEVEN PER CENT. ON DEPOSIT AND CALLS FROM DATE OF PAYMENT.

CAPITAL fixed by the Concession, £1,600,000,

Of which it is now proposed to raise £1,000,000, in 50,000 Shares of £20 each, and £600,000 hereafter, as may be found necessary.

DEPOSIT, £1 PER SHARE ON APPLICATION, AND £1. 10s. ON ALLOTMENT.

TEMPORARY OFFICES: No. 61, GRESHAM HOUSE, OLD BROAD STREET, E.C.

THE projected Central Argentine Railway, about 247 miles in length, will connect Rosario and Cordova, two of the most important cities in the Argentine Republic. Commencing at the city and port of Rosario, it will pass through the fertile provinces of Santa Fé and Cordova, and about midway will form a junction with the high roads penetrating the Southern and Western Provinces, thus opening up a vast country now sadly deficient in means of transit.

ROSARIO stands on the western shore of the great river Paraná, along which, with its tributaries, there is an uninterrupted navigation of more than 2,000 miles. The river is capacious, and accessible at all states of the tide for vessels of even 1,000 tons burden, and forms the centre of the extended system of traffic to the Atlantic coast at Buenos Ayres, and the Central and Northern Provinces.

The city of CORDOVA is the centre and capital of the province of the same name, the most populous and wealthy of all the Upper Argentine Provinces, and is the point of junction for the traffic of all the Northern Provinces. Copper ore abounds in the vicinity, and some of the mines recently opened are yielding favourable returns. Amongst the most important items of export are hides, tallow, and wool, the latter well known in foreign markets for its excellent quality. The Central Argentine Railway will connect Cordova and the productive districts, of which it is the centre, with the Paraná river, and the great system of inland navigation of the magnificent valley of La Plata, whose resources are sufficient (when an efficient outlet is provided) to supply the European markets with every variety of intertropical products

The recent discovery of extensive Silver deposits in the province of San Juan must greatly contribute to the wealth of the Republic, and add materially to the traffic of the Railway. "The yield of silver," says the *Times*, December 16th, 1863, "so far as experiments have yet been made, is likely to prove as rich, if not more rich, than that of any field heretofore worked. Experienced miners from the adjoining Republic of Chili appear to be settling in the neighbourhood, and a Company formed at Buenos Ayres are now establishing smelting-works, with the best English machinery, on the spot."

The Argentine Government, attributing special importance to the early construction of this line, has granted a Concession of a very favourable character. The following are among its most important conditions:—

1. Grant of the Railway in perpetuity, without any right of pre-emption by Government.
2. The property of the Railway and its dependencies to be free from all contribution or impost for a period of forty years.
3. A guaranteed interest of 7 per cent. per annum for forty years on an expenditure not exceeding 6,400*l.* per mile, taking the working expenses at 45 per cent.
4. Line to be completed in sections, the Government guarantee taking effect from the opening of each section.
5. Government to be repaid out of subsequent surplus profits in case any advances are made under their guarantee.
6. Ten miles of Railway to be completed within eighteen months from the 26th May, 1863, the entire line in five years from that date.
7. Lands, whether national, provincial, or private, required for the line, stations, piers, &c. granted free to the Company, with free use of timber from the national forests for Railway and traffic purposes.
8. All articles which may be necessary for the construction and use of the Railway to be exempt from all import duty during forty years.
9. Government-guaranteed interest to be made up and paid at the end of each year.
10. Grant of one league (a little over three English miles) of land on each side of the line from points four leagues from the Rosario and Cordova stations respectively, and one league from each of the towns of San Geronimo (Frayle Muerto) and Villa Nueva, except buildings and lands under cultivation

The aggregate quantity, in round numbers, of lands ceded to the Company is 900,000 English acres. Government engages to obtain and make over to the Company four leagues in the province of Santa Fé, and four in the province of Cordova. These distant grants of land are only subject to the condition of being hereafter peopled, after which no period is limited.

The whole line has been surveyed, and plans and sections handed over to the Company, and Mr. WHEELWRIGHT, the Concessionnaire of the Railway, has already graded ten miles of the line, as provided by the Concession, and the permanent way for this section is in course of shipment.

Mr. THOMAS BRASSEY, Mr. GEORGE WYTHES, and Mr. WILLIAM WHEELWRIGHT, in consideration of receiving in payment one-half of the lands granted, and the sum of 6,400*l.* per mile—the amount on which the interest guaranteed by the Government is calculated,—have undertaken the construction of the Railway in conformity with the provisions of the Concession, the erection of stations and other necessary buildings, the supply of rolling stock, the payment of the expenses incidental to the formation of the Company, and the charges of management.

The contractors also undertake to pay 7 per cent. per annum interest, in half-yearly payments, on the deposit and calls, until the Government guarantee comes into force as respects each section; to work each section from the time of its completion at the rate allowed by the Government, and to maintain and work the entire line for two years after its completion at the same rate, whereby the Government guarantee of 7 per cent. interest is secured to the Shareholders.

The specification for the stations, &c., and schedules of the quantity and description of rolling stock to be supplied, are carefully settled by the contract, with a view to preclude any risk of the Shareholders being called on to furnish additional capital until the development of the traffic shall require it and make it profitable.

The Directors intend to take power in the Articles of Association to issue Debentures, in relief of the capital, to the extent of 600,000*l.*, believing that there will be no difficulty in placing them at a rate of interest which will afford a benefit to the Shareholders. They also feel confident that the lands ceded to the Company will at no distant date prove a source of large profit, and conduce to its future prosperity. In order to avoid any divergence of interest in the management of these lands, the contractors have agreed to unite with the Shareholders in developing their resources.

It is intended to take powers to raise money with a view of developing the lands.

Prospectuses, with Map showing the Line of the projected Railway, may be obtained at the Office of the General Credit and Finance Company, or at the Office of the London Financial Association, and at the Temporary Offices of the Company, where a notarial translation of the Concession, and prints of the Memorandum and Articles of Association, lie for inspection.

Applications for Shares to be made in the annexed form, which must be left at the Bankers, with a Deposit of 1*l.* per share on the number of Shares applied for.

If no allotment be made, the Deposit will be returned without deduction. Should a less number of Shares be allotted than that applied for, the Deposit will be made available towards the payment on the Allotment, and the balance, if any, returned to the applicant.

Prospectuses, and Forms of Application, may also be obtained from the Brokers of the two Financial Companies.

No. FORM OF APPLICATION FOR SHARES.

To the DIRECTORS OF THE CENTRAL ARGENTINE RAILWAY COMPANY, LIMITED.

GENTLEMEN,—Having paid to the CONSOLIDATED BANK the sum of £ ..... I hereby request that you will allot to me ..... Shares of 20*l.* each, in the CENTRAL ARGENTINE RAILWAY COMPANY, LIMITED; and I hereby agree to accept such Shares, or any smaller number that may be allotted to me, and to pay the remainder of the Deposit of 2*l.* 10s. on each of the Shares allotted; to become a Member of the Company, and to sign the Articles of Association, when required; and I request you to insert my name in the Register of Members in respect of the Shares allotted to me.

I am, Gentlemen, your obedient Servant,

FERGUSSON'S MODERN ARCHITECTURE.
Now ready, with 312 Illustrations, 1 vol 8vo. 21s. 6d.
A HISTORY of the MODERN STYLES of ARCHITECTURE.
By JAMES FERGUSSON, F.R.S.
"This volume forms one of the best compilations we accounts of architecture extant in any language. The conciseness yet clearness of the style shows the author to be thoroughly master of his subject, and the portions of the volume, together with the excellence and number of the illustrations, make it a book which must find a place on the shelves of every architect's library."—*Civil Engineer and Architect's Journal.*
"A volume which those who have travelled, and to whom the greater part of the buildings cited are well known, will appreciate as a convenient handbook for reference either to refresh their memories, or for the purpose of comparison, and one which will be even more valuable to those who have never wandered from home, and who find here conveniently accessible stores of information."—*Christian Remembrancer.*
"Mr. Fergusson has now completed the 'History of Architecture' of which he published two volumes some three or four years back. The present volume is, nevertheless, a distinct work, because it is confined exclusively to the architecture of the last three centuries; and it is no less novel than distinct, for, practically speaking, we may affirm that no one previously has treated of modern architecture as a whole, or has attempted to criticize its miscellaneous examples from a comprehensive point of view."—*Times*
JOHN MURRAY, Albemarle-street.

"A work of reference, such as is needed in every industrial establishment."—*The Times.*

GEORGE JENNINGS,
Engineering Depot, Palace Wharf,
Blangate, Lambeth, S.

GOULD & PORTER (late CARY) are now manufacturing their improved 10-inch DUMPY LEVEL, best quality, complete for 5l. 15s. 0d. with silver ring compass, 12l. 10s. 0d.; 12-inch ditto, ditto, 13l. 0s. 0d. and 12l. 12s. 6d. Best 5-inch THEODOLITES, 22l. 0s. 0d. All other MATHEMATICAL INSTRUMENTS at Revised Prices.—Optical and Mathematical Instrument Makers to the Admiralty, Royal Geographical Society, Royal Military College, Sandhurst, &c. Established upwards of a century.—181, Strand, London.

GUTTA-PERCHA MILL-BANDS.—The Gutta-Percha Company beg to state that the increasing demand for the Gutta-Percha Stropping for Driving-bands, Lubricators, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractability and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Bosses, Union joints, Flasks, Bottles, Bowls, Toilet-trays, Curtain-rings, Galvanic Batteries, Tailbotype Trays, &c. &c. manufactured by the Gutta Percha Company, and sold by their Wholesale Dealers in town and country.
THE GUTTA-PERCHA COMPANY, PATENTEES,
18, WHARF ROAD, CITY ROAD, LONDON.

POLONCEAU and SEYSSEL ASPHALTE.

ESTABLISHED  1838

For covering Flat Roofs, Paving and Flooring of every description, especially in places subject to damp and vermin. This Asphalte is now exclusively used for paving Stables (as shown above), the existence of pests prevailing the generation of ammonia. For Estimates and Prices, &c. &c. apply to JOHN PILKINGTON, 15, Fish street-hill, London, E.C.
Country Builders supplied with Asphalte in Bulk for covering Footings, Barn Floors, &c. with instructions to lay it down.

SECRETARY—George William Lovell.
ASSISTANT SECRETARY—John J Broomfield.

INSURANCES against Loss by Fire are effected by the Phœnix Company upon every description of Property, in every part of the world, on the most favourable terms.
The promptitude and liberality with which its engagements are always met by the Company are well known, and the importance of its relations with the public may be estimated from the fact that since its establishment it has paid more than Eight Millions sterling in discharge of Claims for Loss by Fire.
Insurances with the Company expiring at Ladyday must be renewed within fifteen days thereafter, or they will become void.
Receipts are now ready at the principal Offices, Lombard-street and Charing cross, and with the respective Agents throughout the United Kingdom.

CHAPLIN'S PATENT PORTABLE STEAM-ENGINES AND BOILERS.

TEN THOUSAND POUNDS READY TO BE ADVANCED by the TEMPERANCE PERMANENT LAND and BUILDING SOCIETY, on Freehold or Leasehold Property, for any period of years not exceeding fifteen, the mortgage being redeemable by equal monthly instalments. Interest (in addition to a small premium), 5 per cent. on the balance each year.—Apply to HENRY J. PHILLIPS, Secretary.
Offices, 34, Moorgate-street, London, E.C.
NOTE.—More than a quarter of a million pounds sterling have been advanced upon house property alone.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION (Incorporated by Act of Parliament, 1850), 14, RUSSELL STREET, Covent Garden, W.C. Advances from 10£ to 1,500£ upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No pre-liminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.
EDWARD HARPER, Secretary.

TIME IS MONEY.—All who employ workmen should send two stamps to MERRITT & HATCHER, 2, Grocers' hall, Poultry, E.C. and by return of post they will receive a variety of useful Forms, by which book keeping is facilitated, and loss of time and material prevented.—MAPS, PLANS DRAWINGS, BILLS of QUANTITIES, &c. expeditiously Lithographed in the best style, at the lowest possible charges.—MERRITT & HATCHER, Printers in every Branch, 2, Grocers' hall court, Poultry E.C.

TO BRICK MASTERS AND OTHERS.
TO BE LET, a BRICKYARD, on the Severn Side, near to MALVERN (possession can be had at once), with good ENGINE, kilns, stove, pipe-machine, &c. all complete, in good working order well situated, and with a good business in the Brick and Pipe Trade, with or without about 15 ACRES of MEADOW LAND Satisfactory reasons given for present owners giving up the same. Application to be made to Mr DAVID PRIEST, Chief Brick yard, Severn Stoke, near Worcester; or Mr. JOHN JENNINGS, Brisel Fields, Oldbury, near Birmingham.

IMPORTANT to COAL PROPRIETORS, CAPITALISTS, and OTHERS.—The owners of valuable MINES of COAL, lying within and under a compact freehold estate of upwards of two acres, situate about three miles from the important manufacturing town of Blackburn, Lancashire, are prepared to treat for the sole SALE of the COAL, or to enter into favourable arrangements for leasing the same for a term of years. Good turnpike roads intersect the estate, and the same is within very easy distance of railway and canal.—For further particulars apply to Messrs. ROBINSON & SON, Solicitors, Blackburn.

A FREEHOLD MANSION TO BE SOLD. The elegant Furniture may be had at a valuation. There are four reception-rooms, two being 30 feet in length; eleven best bedrooms; stabling for eight horses and four carriages; suitable servants' offices; extensive ornamental grounds, with green-houses, in all 28 acres; gravelly soil; near Sunningdale Station, South-Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. MAY, Esq. Solicitor, 67, Russell-square.

BUILDING LAND, at KENTISH TOWN.—TO BE LET for VILLA RESIDENCES.—Term, 99 years. Road, Paving, and Sewer may be included in Ground Rent, and improved Ground Rent purchased.—For plans and terms apply personally to Mr. JOSEPH SALTER, Land Agent, No. 311, Kentish-town road, N.W.

TO BUILDERS, OMNIBUS PROPRIETORS, CAB MASTERS, COWKEEPERS, and OTHERS.—TO BE LET, large and commodious PREMISES in Kentish Town, capable of standing from forty to fifty horses, within fifteen minutes' walk of the Great Northern Railway, and five minutes' of the North London. There is also on the premises a large Grinding Mill Chaff Machine, nearly new, which can be disposed of to the occupier.—For particulars apply to Mr. J. CULVERHOUSE, Purfleet Wharf, Camden Town.

SANDOWN, ISLE of WIGHT.—Opening of the Railway.—BUILDING LAND, opposite the proposed Pier, and in full view of the magnificent Bay, on leases for 1,000 years.—Apply to Mr. WITHERS, Timber Merchant, Sandown.

BUILDING LAND TO BE LET, on advantageous terms, for 80 years, situate at Merton, Surrey, within 30 minutes' walk of the Wimbledon Station, or 45 minutes of the City.—The plan of Estate can be seen, and particulars obtained, upon application to Mr. EDWIN SHALES, Surveyor's Office, Christ's Hospital, Newgate-street, from TEN till FIVE o'clock.

HASTINGS. — To BRICK-MAKERS, BUILDERS, and CONTRACTORS. TO BE LET, with immediate possession, the PLANT of a BRICKFIELD, where steam power is used. The Plant consists of a 12 horse power steam engine, locomotive boiler, one of Caton's patent B B brick machines (which will make from 15,000 to 17,000 bricks per day); the sundry machinery, which may be had at the option of the incoming tenant; sufficient barrows and planks to work the machine, and covering for back ground for 16,000 bricks. The clay is of a very superior sort, nearly white, and free from stone. This yard is part of an estate of 40 acres recently laid out for building purposes, thus insuring a large sale on the spot. The whole of the above can be had at fair valuation, or, if preferred, at a rent equivalent to outlay.—Further particulars of the Proprietor, Mr. S. HAYWARD, Ore, near Hastings.

FINE CLAY PROPERTY.—TO BE LET, on Royalty, sixty miles from town, with every convenience, and siding laid down into North Western Railway. Apply to C. W. ORFORD, 78, New street, Birmingham.

WESTMINSTER CHAMBERS, opposite the India Offices, at Victoria street, and close to the Houses of Parliament. OFFICES and CHAMBERS TO BE LET. Apply to Messrs. BANKS & BARRY, 27, Sackville-street, or G. S. SIDNEY, Esq. Secretary to the Mutual Tontine (Westminster chambers) Association, Limited, No. 49, King street, Cheapside, E.C.

FREEHOLD LAND TO BE SOLD or LET, on Building Leases,
2 Acres, near the Station, at Eltham.
1 Acre, adjoining Norwood Junction Station.
2 Acres, Glengrall road, Old Kent-road.
A large WHARF TO BE LET, near the Old Kent-road.
Apply to Mr MAY, Acorn Timber Wharf, Old Kent road.

LEWISHAM.—TO BE SOLD, by Private Treaty, a Valuable FREEHOLD ESTATE, of about 20 acres, with frontages to main roads. Land-tax redeemed. Or, the Land to be Let on Building Leases for first-class Villa Residences. Plans may be inspected, and information by letter (pre-paid) to PHILIP BLEE, Esq. 89, Warwick-street, Belgravia, Architect to the Freeholder.

UPPER NORWOOD.—TO BE LET, close to the Palace, ELIGIBLE SITES for Small Villas, a class of building in great demand. Advances if required.—Apply to Mr. GREEN, 25, College-hill, Cannon-street, E.C.

LORDSHIP ROAD, Stoke Newington.—TO BE LET, on Building Terms of 99 years (at low ground rents), several PLOTS, eligibly forming detached villas or terraces.—Apply to Mr. ROINDA, Bonnetto cool, Church-street, Stoke Newington.—N.B. Bricks delivered on the estate at low prices.

JUNIOR ATHENÆUM CLUB.—The Committee are prepared to receive COMMUNICATIONS as to a SITE for a TEMPORARY or PERMANENT BUILDING, at the West end of town. All letters on the subject to be addressed to GEORGE R. WRIGHT, Esq. F.S.A. Secretary to the Junior Athenæum, Committee-room, St. James's Hall, Regent-street, W.

BUILDING LAND at KENNINGTON-LANE, about five minutes' walk from the Elephant and Castle, for 3 or 4 first-class Houses, with Coach-houses and Yards. Ground-rent. ALSO HOUSES and SHOPS FOR SALE in course of erection and finished.—Apply to Mr. J. SEXBY, 35, Lower Kennington-lane, S.

BUILDING SITE REQUIRED, within half a mile of London Hospital, on which to erect the Fast London Hall, for the gratuitous Preaching of the Gospel to the working classes in the East of London. Space required for seating from 1,000 to 1,500 persons.—Address, J. HIGGS, 13, RED PARSLEY Street, Bishopsgate, E.C.; or Mr. THOMSON, Esq. Treasurer, 48, Mincing lane, E.C.

TOTTENHAM. Four Eligible Plots of FREEHOLD BUILDING LAND, with the Carcass of Two Pairs of Semi-detached Residences, in a forward state, erected thereon, FOR SALE. Price 1,000£.—Apply to Messrs. EDWIN FOX & BOUSFIELD, 31, Coleman street, Bank, E.C.

HARROW, ROXBOROUGH PARK.—FREEHOLD LAND (about 100 acres) TO BE LET, on 99-year Leases, for Building Villa Residences. It is a finite near the school, on the slope of the hill, towards the railway, from which it is distant about three quarters of a mile. The occupier of each house would be entitled to the privileges of the school for his children, and would have a free pass by railway to London for eleven years. Bricks made on the estate, and money advanced if required. Plans, and further particulars, apply at Mr HESKETH'S Office, London Assurance, No. 7, Royal Exchange, E.C.

TO BE SOLD, extensive substantially-built LEASEHOLD PREMISES, known as Oakley Hall, Manor-street, Chelsea, near the river. Used for public purposes, private theatricals, &c. Suitable for a manufactory, engineer, builder, goods depository, or any business requiring space. Steam power may be used. Two doors, 75 feet by 41 feet; top one entire room; ground-floor for storage of goods, erection of four Houses, or extending the present building.—May be viewed, and particulars obtained on the Premises. Lease 75 years. Low ground-rent. The present lease, scenery, &c. optional.

FOR SALE, in the ISLE of WIGHT, ASHLAKE BRICKYARD, on a twenty-one years' lease, [illegible] 200£ situate near Wootton-bridge Creek, a good landing place for vessels, and a good road leading from the Ryde-road, comprising three acres of land, and plenty of good brick and tile clay; a run of water through the yard. A four-room cottage let for 8£. per annum to the brick-burner; a three hole kiln, sheds, &c. The rent of the yard is 9£. per annum, royalty free. Any person purchasing the yard can take the plant at a valuation.—Inquire of JAMES HUTCHING, Builder, Binstead, near Ryde, Isle of Wight.

BRICK EARTH.—TO BE LET, or Lease, LAND, containing good Brick Earth, situate three miles south of London.—Apply to Mr. W. H. DEAN, Surveyor, 43, Fetter-lane, church-street, London, E.C.

RED BRICKS, STOCKS, PAVIORS, PALE and BRIGHT YELLOW CUTTERS.—ROBERT LITTLE, Brickmaker, Slough, begs to inform Builders and the Trade generally that he is now prepared to Supply any quantity of good well burnt RED BRICKS (either plain, splay, or moulded), suitable for facings. Mr. LITTLE is able to Load Bricks for London, or any other part, by either the Great or South Western Railways.—The Bricks may be seen, and prices obtained, either at the Field, Slough, or on application to R. LITTLE, Great Western Railway, Windsor.

WANTED, by a Young Man who has just served his articles, a SITUATION in a SURVEYOR'S OFFICE.—Address, J. T. ALLEN, Wish House, Southsea.

FIRE BRICK and CEMENT WORKS WOODEN BOX, near BURTON-ON-TRENT.
Established 1847
JOHN KNOWLES,
HAWLEY NEW WHARF,
HAMPSTEAD ROAD, CAMDEN TOWN, N.W.
Fire Bricks, Tiles, and Lumps of all sizes, or made to order on short notice.
Crucible and Cement Clay. Wholesale and for Exportation.
EVERY ARTICLE MANUFACTURED AT THE ABOVE WORKS.
N.B. These goods are supplied to the largest Steel Smelting, Armour Plate, and Crucible Works in the World, to which references can be given on application.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of BURNING, patented by Mr ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two-fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees, 17, Millbank-street, Westminster

TO ARCHITECTS.

E Advertiser, who is a competent LAND nd ENGINEERING SURVEYOR and DRAUGHTSMAN, wi h ars' experience, has been recommended by ENGAGE in an where he will have an opportunity of ASSISTING on ARCHI- DRAWINGS. and 16, Gresham-street, London, E.C.

BUNNETT & CO.

PRIZE MEDAL, GREAT EXHIBITION,
FOR
REVOLVING IRON SHUTTERS.

No. 1.—Patent, Bank Quality, with best Worm and Wheel Gearing, *6s.* per foot.
No. 2.—Patent, for Shops and Offices, with best Chain Gearing, *5s.* per foot.
No. 3.—Patent, for Private Houses, without Gearing, raised and lowered with Balance Weights, *3s. 6d.* per foot.

BUNNETT & CO. invite the attention of Architects and Builders to their recent Improvements in LIGHT REVOLVING IRON SHUTTERS for the WINDOWS of PRIVATE HOUSES, raised and lowered with graduated balance weights, without any gearing.

A matured experience, extending over twenty-five years, has convinced the Patentees that *no permanent dependence can be placed in any other*

SYSTEM OF
SELF-COILING SHUTTERS.

BUNNETT & CO.'s
Widely-known and well-appreciated
BANK SHUTTER
requires no comment, as it is in use in a large majority of the Banking Establishments, Goldsmiths' Shops, and Public Offices of the United Kingdom and the British Colonies; but the Patentees wish to make it known that they have recently completed extensive Additions to their
WORKS AT DEPTFORD,
and have erected new and most powerful Machinery with the view of meeting the largely-increasing demand for the
REVOLVING IRON SHUTTER,
With all necessary Despatch.

LONDON OFFICE,
17, QUEEN STREET, CITY;
GLASGOW OFFICE,
199, BUCHANAN STREET.

THE GREAT FIRE IN THE CITY.—"A closer examination yesterday of the track of the recent fire in Wood-street, shows in a striking manner how much it was confined to a class of buildings the interior arrangements and means of communication of which appear to have been made in defiance or ignorance of the principles which now regulate such matters, under the operation of the Metropolitan Building Act. The warehouses and offices which have perished were to have been separated from each other by thin lath and plaster partitions for the most part, and only in one instance was there an iron door between one part of the interior of the same building and another, such as is now commonly used and made imperative, indeed, in the construction of warehouses, as an invaluable means of shutting off communication in case of fire. That iron door, too, which remains uninjured, would have been complete effectual in arresting the flames in that direction, had they not penetrated by a vulnerable point into the part of the building which it protected.

THE USE OF IRON FOR SAFETY AGAINST FIRE was most conclusively proved by a very remarkable circumstance. The large and handsome warehouses of Messrs. J. & R. Morley, situate at the corner of Gresham and Wood Streets, overlooked by a large window on the ground floor at the back the little court in which the fire originated, and to which it was at first confined. THIS LARGE WINDOW WAS PROTECTED ON THE OUTSIDE BY A REVOLVING IRON SHUTTER, AND THAT MORE AGAINST ROBBERY THAN FIRE.

On this occasion for some time the flames played fiercely, but harmlessly, about the outside of the window so guarded by the Iron shutter. Had they once entered Messrs. Morley's premises at that point, the stock stored inside, and estimated at from 250 000*l.* to 300 000*l.*, would inevitably have been destroyed, it is feared, the devastation would have ended in that one vast pile of buildings. Upon such a slender condition of safety and property almost fabulous in value, and belonging to a single firm, depend in this case."—*Times*, 22nd December, 1864.

THE REVOLVING IRON SHUTTER THAT ARRESTED THIS FIRE WAS MANUFACTURED IN 1849, BY
BUNNETT & CO., Patentees,
London & Glasgow.

FLOORING! DEALS! MAHOGANY!

This stone (which is a perfect colite) is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tool, saw, or is wrought at a cheaper rate than any stone in the kingdom.
*** The above WEATHER STONE
is 1s. 9d. per cubic foot, delivered in London.

W. & J. FREEMAN, Merchants in the various descriptions of STONE, GRANITE, and SLATE for Engineering and Building Purposes. Supplied direct from the Quarries, by vessel or railway. Direct communication with the principal ports for EXPORTATION. Wharf prices and estimates for specified contracts, including quarry work or other labour, forwarded on application.—Office, 27, Millbank-street, London, S.W.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.
ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Baryte from ten to thirty per cent. both sold under the name of "Improved Zinc Paint," or as the Number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.
CHEAPNESS. Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."
THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

ROYAL ACADEMY of ARTS.—NOTICE to ARTISTS.—All Works of Painting, Sculpture, Architecture, or Engraving, intended for the ensuing EXHIBITION at the ROYAL ACADEMY, must be sent in on MONDAY, the 4th, or TUESDAY, the 5th, of APRIL next, after which time no Work can possibly be received; nor can any Works be received which have already been publicly exhibited.

FRAMES.—All Pictures and Drawings must be in gilt frames. Oil Paintings under glass, and Drawings with wide margins, are inadmissible. Excessive breadth in frames, as well as projecting mouldings, may prevent pictures obtaining the situation they otherwise merit. The other regulations necessary to be observed may be obtained at the Royal Academy.

JOHN PRESCOTT KNIGHT, R.A. Sec.

Every possible care will be taken of Works sent for exhibition, but the Royal Academy will not hold itself accountable in any case of injury or loss, nor can it undertake to pay the carriage of any package.

No pieces of Works to be disposed of may be communicated to the Secretary.

THE ARCHITECTURAL MUSEUM
SOUTH KENSINGTON MUSEUM, W.
LECTURE SESSION, 1864.

TUESDAY next, MARCH 29th.—"Early Brickwork in England." By the Rev. E. L. CUTTS, M.A. The Chair will be taken at EIGHT o'clock precisely.

NEW ZEALAND EXHIBITION, 1865.
The Commissioners appointed by the New Zealand Government hereby give Notice, that an EXHIBITION of RAW MATERIALS, Machinery, Manufactures, and Fine Arts, will be held in the City of Dunedin, Province of Otago, New Zealand, in JANUARY, 1865, when rewards for merit, in the form of honorary certificates, will be given in the several sections, with the exception of Fine Arts. Space will be reserved for Exhibitors from the United Kingdom and her Colonies, the Continents of Europe and America.—Copies of the decisions, forms of application for space, and further details may be obtained from the undersigned.—By order.

JOHN MORRISON, Agent for the New Zealand Government.
New Zealand Government Agency, 4, Adelaide-place,
King William-street, London, February, 1864.

NOTICE.
BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72–74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand; and also for the consequent more extensive execution, by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work.

72–74, Bishopsgate-street Within, November, 1863.

COMPETITIONS.

TOWN and BOROUGH of ROCHDALE.
TOWN HALL &c. TO ARCHITECTS.—The Corporation of Rochdale are desirous of receiving DESIGNS for a TOWN HALL, wherein are to be provided fit and convenient public offices, for holding the meetings and transacting the business of the Council, and for holding such public meetings and transacting such public business as the Council may direct or allow to be held therein. The following premiums will be given for such three of the designs as in the opinion of the Council are the highest in merit, viz.:—

For the 1st set of such designs, 100l.
" 2nd ditto 60l.
" 3rd ditto 40l.

all of which premiated designs are to become the absolute property of the Corporation. The plans, specifications, and estimates must be distinguished by a motto or device, and be accompanied by a sealed envelope containing the name and address of the competitor, bearing a corresponding motto or device to that on the plans, &c. Lithographed plans of the site, with printed statements of the offices, rooms, and conveniences required, may be had on application to the Town Clerk on and after the 5th MARCH next; and the competing Designs, &c. must be delivered at my Office, in Yorkshire-street, Rochdale, on or before the 1st day of MAY next.—By order.

ZACH. MELLOR, Town Clerk.

Rochdale, 27th February, 1864.

CONTRACTS.

HEXHAM LOCAL BOARD of HEALTH
WATERWORKS and SEWERAGE. TO IRON FOUNDERS, BRASS-FOUNDERS, EARTHENWARE PIPE MANUFACTURERS, CONTRACTORS, and OTHERS.—The Local Board of Health for the District of Hexham, in the County of Northumberland, do hereby give Notice that they are prepared to receive TENDERS from parties willing to undertake any of the following CONTRACTS, namely:—

WATERWORKS.

Contract A, for supplying Cast-iron Water-pipes and other Castings.
Contract B, for supplying Sluice-valves, Hydrants, and other street fittings.
Contract C, for laying and jointing Cast-iron Water-pipes and fixing Sluice-valves, Hydrants, and other street fittings
Contract D, for constructing a Storage Reservoir, Filter Beds, Service Reservoir, and other works.

SEWERAGE.

Contract No. 1, for providing materials and constructing Brick Sewers, Earthenware Pipe Sewers, Outlet Works, Man-holes, Gullies, Overflows, and other works.

Plans, sections, detail drawings, and specifications of the several works may be seen, and duplicate forms of Tender, bills of quantities, and schedules for prices may be obtained on and after MONDAY, the 14th day of MARCH next, on payment of Ten Shillings for each Contract, on application at the Office of ISAAC BATY, Solicitor, Hexham (Clerk to the Local Board), or at the Offices of JOHN LAWSON, Civil Engineer, 34, Parliament Street, Westminster. Sealed Tenders, endorsed "Tender for Waterworks or Sewerage," must be forwarded to the Clerk to the Local Board on or before WEDNESDAY, the 30th day of MARCH next. The Local Board do not bind themselves to accept the lowest or any Tender.

ISAAC BATY, Clerk to the Local Board.

Hexham, 24th February, 1864.

TO SEWERAGE CONTRACTORS and Others.—TOWNSHIP of TRANMERE, CHESHIRE.—The Local Board for the District of Tranmere are prepared to receive TENDERS for the CONSTRUCTION of about 2,300 Yards of MAIN BRICK SEWERS, and about 7,100 Yards of PIPE SEWERS, with the necessary Junctions, Branches, Man holes, Gullies, and Ventilating Shafts. Plans, Sections, and Specifications, &c. may be seen on application to Mr. W. A. RICHARDSON, C.E. Surveyor to the Local Board, on and after TUESDAY next, the 22nd instant, and copies of the Specifications and Form of Tender may be obtained on payment of 10s. Sealed Tenders, made on the printed forms only, to be addressed to me, and left at my office not later than THURSDAY, the 31st APRIL next. The Local Board do not bind themselves to accept the lowest or any Tender.—By order.

GEORGE LLOYD, Law Clerk to the Local Board.

Public Offices, Holt-hill, Tranmere, March 14, 1864.

CONTRACTS.

SOUTHPORT HOTEL COMPANY (Limited).—Parties desirous of CONTRACTING for the WORKS necessary for the ERECTION of the HOTEL, may obtain the quantities at the Office of Mr. A. D. CUFFLEY, Architect, 44, Princes-street, Manchester, upon the payment of Two Guineas, which sum will be returned to the competitors not engaged upon the opening of the Tenders. The drawings will be ready for inspection on and after the 31st of MARCH. Sealed Tenders to be addressed to the Directors, care of W. SALE, Jun. Esq. Secretary, Messrs. SALE, WORTHINGTON, SHIPMAN, & SEDDON, Solicitors, Booth-street, Manchester, on or before APRIL the 21st.—The lowest or any Tender will not necessarily be accepted.

STAUNTON COMMON DRAINAGE.—To CONTRACTORS. The Drainage Commissioners for the Arterial Drainage of Staunton Common are prepared to receive TENDERS for STRAIGHTENING, WIDENING, and DEEPENING of LETTON BROOK or LAKE.—Plans, sections, and specifications may be inspected at the Office of Mr. T. CURLEY, C.E. Broomy-hill, Hereford.—Sealed Tenders to be sent to the undersigned on or before TEN o'clock on SATURDAY, the 9th of APRIL next. Printed quantities and forms of Tender will be supplied by Mr. CURLEY,

J. F. SYMONDS, Clerk to the Commissioners.

15, Bridge-street, Hereford.

SEAFORD, near NEWHAVEN, SUSSEX.
TO BRICKMAKERS.—Persons desirous of TENDERING for OPENING a BRICKFIELD, immediately, in this rising sea-place, to which the rail from Newhaven will be opened in May, may learn the particulars by applying to Messrs. WM. G. HABBESHON & PITE, Architects, 38, Bloomsbury-square, London, W.C.

TO BUILDERS.—The Committee for carrying out the proposed Enlargement of St. Cuthbert's Church, Bedford, invite TENDERS for the EXECUTION of the WORKS, according to the plans and specifications prepared by Mr. PENROSE, Architect, which will be deposited at the House of JOSEPH MANTON, Parish Clerk, No. 26, The Grove, St Cuthbert's, from MARCH 14th to APRIL 2nd, inclusive. Any further information may be obtained on application to Mr. PENROSE, Chester House, St. Paul's Churchyard, London. Tenders, sealed and endorsed "Tender for the Enlargement of St. Cuthbert's Church," to be sent to the Rev. CHARLES ROLLOPE, Rector, St. Cuthbert's, Bedford, by TWELVE o'clock at noon on MONDAY, APRIL 4. The Committee will not necessarily accept the lowest or any Tender. The contractor will be required to find security for the due execution of the works.

Bedford, March 10, 1864.

TO CONTRACTORS and OTHERS.—The Board of Works for the Wandsworth District are desirous of receiving TENDERS for the CONSTRUCTION of the following SEWERS, in the parish of Clapham, viz. about 2,420 feet of 3 ft. 3 in. by 2 ft. 3 in. and 500 feet of 3 ft. by 2 ft.—one brick; and also for the LAYING of about 4,800 feet of STONEWARE-PIPE SEWERS of various sizes. The specification, plans, and sections may be seen, and all further information obtained, at the Office of Mr. C. W. JOHNSON, Surveyor, Manor Cottage, Lavender-lane, Clapham, between the hours of TEN and FOUR. Tenders are to be sent in, under seal, to the Board as below, on or before TUESDAY, the 5th of APRIL next, and are to be endorsed "Tender for Clapham Sewers." Persons tendering must be in attendance at the Offices of the Board on WEDNESDAY, the 6th of APRIL next, at FOUR o'clock p.m. when the Tenders will be opened. Security will be required for the due performance of the contract. The Board do not pledge themselves to accept any Tender.—By order of the Board of Works for the Wandsworth District.

ARTHUR ALEX. CORSELLIS, Clerk to the Board.

Battersea-rise, Wandsworth, S.W. 19th March, 1864.

TO BUILDERS.—TENDERS are required for the ERECTION of Eleven fourth-rate DWELLING HOUSES with OFFICES, in Engineer road and Millward-street, Woolwich Common.—Plans and specifications may be seen at the Offices of Messrs. CHURCH & RICKWOOD, Architects and Surveyors, William-street, Woolwich, where all necessary information may be obtained. Tenders to be sent in on WEDNESDAY, the 30th MARCH, 1864, addressed to Messrs. CHURCH & RICKWOOD.—The lowest or any Tender will not necessarily be accepted.

WORKHOUSE ACCOMMODATION WANTED.—The GUARDIANS of the WEST LONDON UNION are desirous of RECEIVING PROPOSALS from Parochial or Union Authorities for the MAINTENANCE, Care, and Clothing, for a limited period, of the WORKHOUSE INMATES, the present number of whom is 414, and are of both sexes. The Guardians are open to receive proposals for the reception of either a part or the whole of the Inmates. The Guardians are also open to receive from the owners of any building, which might without difficulty be converted into a temporary workhouse, proposals for the hire of the same for a limited period. It is desired that the accommodation required should be within a few miles of the city of London.—Terms and particulars to be sent without delay to Mr. JOHN PONTIFEX, Clerk to the Guardians, 5, St. Andrew's-court, Holborn, London.

TO BUILDERS.—Noble Street, City.—TENDERS are required for sundry ALTERATIONS, ADDITIONS, and REPAIRS to No. 24, Noble-street, City. The drawings, specification, and conditions may be seen on the Premises, on and after WEDNESDAY next, the 30th instant. The lowest or any Tender will not necessarily be accepted.

TO BUILDERS AND IRONFOUNDERS.
PERSONS desirous of TENDERING for the ERECTION of an ENTRANCE COURT (chiefly iron and glass) and other works, (for the Agricultural Hall Company, Limited, may see drawings and specifications, and obtain particulars, at the Offices of the Clerk of Works, Barford-street, Islington. Tenders to be sent in before TWELVE o'clock on TUESDAY, 5th day of APRIL, 1864. The Directors do not bind themselves to accept the lowest or any other Tender.

[For remainder of Contracts see next Page.

CONTRACTS.

BRISTOL and PORTISHEAD PIER AND RAILWAY.—CONTRACT for WORKS.—The Directors of the Bristol and Portishead Pier and Railway Company are prepared to receive TENDERS for the CONSTRUCTION of about 10 miles of their RAILWAY, with Approaches, Works, and Conveniences. The crossings of the various works may be seen on, and after the 11th day of APRIL next, at the Office of the Company's Engineers, Messrs. McCLEAN & STILEMAN, 23, Great George-street, Westminster, S.W., or at the Secretary's Office, 5, Clare street, Bristol. Contractors who wish to tender may obtain lithographed copies of the drawings, bills of quantities, specification, and form of Tender, on application to the Engineers or at the Secretary's Office, on payment of £5. Tenders must be addressed to the Secretary, 6, Clare street, Bristol, on or before the 8th day of APRIL next. The Directors do not bind themselves to accept the lowest or any Tender.

JAMES FORD, Chairman.
J. P. R. DANIEL, Secretary.

Bristol, March, 1864

NOTICE to BUILDERS.—TENDERS are required for the ENLARGEMENT of YORKTOWN CHURCH, Surrey, in accordance with plans and specification to be seen at Yorktown Parsonage. Sealed Tenders to be sent to the Chairman of the Building Committee, at Yorktown, Farnborough Station, on or before the 12th APRIL. The Committee do not pledge themselves to accept the lowest or any other Tender.

TO PAVIORS.—The Board of Works for the Holborn District will meet at the Board Room in Little Gray's-inn-lane, on MONDAY, the 4th APRIL, 1864, at SEVEN o'clock in the evening precisely, to receive TENDERS for REMOVING the present ASPHALTE PAVING in Lamb's Conduit-street and RE-LAYING the same with NEW ABERDEEN GRANITE SETTS. A specimen of the work and the form of Tender may be seen on application at the Offices of the Board, in Little Gray's-inn-lane, between the hours of TEN and FOUR daily. The Board do not bind themselves to accept the lowest or any Tender.

S. W. HOPWOOD, Clerk.

Clerk's Office, 47, Chancery-lane, March, 1864.

TO BUILDERS and OTHERS.—Persons desirous of TENDERING for the ERECTION of a NEW CHURCH, at Far Headingley, near Leeds, Yorkshire, are invited to apply at the Office of the Architect, where the plans and specification may be seen, all bills of quantities obtained, and sites shown on and after APRIL next. Tenders to be delivered at the above office, not later than the 18th of APRIL next. The lowest or any Tender will not necessarily be accepted

W. H CROSSLAND, Architect.

New Oxford Exchange, Leeds

TO IRON FOUNDERS, SMITHS, and OTHERS.—The Directors of the Rochester, Chatham, and Strood Gas Light Company are prepared to receive TENDERS, which must be delivered at their Office, 56, High-street, Rochester, before TEN o'clock in the forenoon of WEDNESDAY, the 6th APRIL, 1864, for the SUPPLY of about 70 Tons of WROUGHT-IRON TIES, WROUGHT-IRON STRAPS, and SCREWED BOLTS, and about 4 tons CAST IRON PLATES, to be delivered free at their Works, Rochester.—The specification and form of Tender may be had on application at the Offices of the Company where also the drawings may be seen. The Directors do not bind themselves to accept the lowest or any Tender. By order,

W. SYMS, Secretary.

TO TIMBER MERCHANTS and OTHERS.—The Directors of the Rochester, Chatham, and Strood Gas Light Company are prepared to receive TENDERS, which must be delivered at their Office, 56, High street, Rochester, before TEN o'clock in the forenoon of WEDNESDAY, the 6th APRIL, 1864, for the SUPPLY of about 150 Loads of DANTZIC or MEMEL TIMBER, in balks, varying from 12 inches square to 14 inches square, in lengths of 23 feet 6 inches, 20 feet 6 inches, 35 feet, 43 feet, and 45 feet; to be of sound carol free at the Works, Rochester. The specification and form of Tender may be had on application at the Offices of the Company. The directors do not bind themselves to accept the lowest or any Tender.—By order,

W. SYMS, secretary.

SOUTH NORWOOD.—To BUILDERS.—TENDERS are required for FINISHING the Two newly erected VILLA RESIDENCES, Selhurst-road.—Plans and specifications may be seen at Mr. GRIGGS'S, 12, City-road, on and after the 24th inst. to the 7th APRIL between the hours of TEN and FOUR. Further part. ulars may be known on application to Mr H CARD, Surveyor, Lower Addiscombe-road. Tenders are to be sent in on or before the 8th of APRIL. The proprietor does not bind himself to accept the lowest or any Tender.

TO CONTRACTORS and BUILDERS.—The Trustees of Watts's Charity at Rochester are desirous of receiving TENDERS for the CONSTRUCTION of certain ROADS and OTHER WORKS, on land near the New Infant Schools in Ordnance-road, in the parish of Chatham, Kent. Plans, sections, and specification of the proposed works will be deposited at the New Almshouses, Maidstone-road, Rochester, and will be open to inspection on and after THURSDAY, the 31st instant, and up to the day of Tender, between the hours of TEN and FOUR o'clock. Tenders are to be sent in to the Office of Messrs. LEWIS & MARSH, High-street, Rochester, on or before SATURDAY, the 9th day of APRIL next (after which day no Tender will be received), sealed up, and addressed "To the Trustees of Watts's Charity at Rochester," and marked "Tender for Roads." The Trustees will not hold themselves bound to accept the lowest or any other Tender. And the Contractor will have to enter into sufficient contract (either with or without sureties as the Trustees shall require, for the due execution of the works. Such contract to be prepared by the Trustees' Solicitor at the expense of the Contractor.—By order of the Trustees

ROCHESTER, 18th March, 1864.

J. LEWIS, Clerk.

TO BUILDERS, IRONFOUNDERS, and ROAD MAKERS.—The Burial Board for the Parish of Great Driffield, in the county of York, are prepared to receive TENDERS for the various Works required in the ERECTION of two CHAPELS with Soires, an Entrance-lodge, Entrance-gates, a Wall, and Iron Railing, for the purposed NEW BURIAL GROUND, situate near to Great Driffield aforesaid; and also for forming the Roads, Walks, and Drives, and Planting and Laying out the Grounds. The drawings, specifications, and forms of tender may be seen and obtained at my Office, from MONDAY, the 21st day of MARCH inst. to THURSDAY, the 31st day of the same month, both inclusive. Printed bills of quantities may be had on the same being applied for as aforesaid. Tenders, on application personally or by letter, either to me, or to Messrs. PRIDDLE & SON, Architects, Darlington, from whom any further information may be obtained, respecting the same, are to be required to enter into a bond, with one sufficient surety, for the due performance of the Contract. Tenders properly sealed and endorsed, and addressed to the undersigned, are to be delivered on or before the 1st day of APRIL next. The Board do not bind themselves to accept the lowest or any Tender.—By order,)

JAS. M. JENNINGS, Clerk to the Board.

Driffield, 15th March, 1864

MONTGOMERY COUNTY WORKS.—NEW WING, &c. 42 Cells, Pentonville System.—The Visiting Justices are prepared to receive TENDERS for the above. The plans, specifications, and conditions may be inspected at the County Surveyor's Office, Kerry, Montgomeryshire, on and after the 22nd day of MARCH next. Tenders, sealed up, and addressed "To the Chairman of the Visiting Justices, County Gaol, Montgomery," to be delivered on or before the 1st day of APRIL next. The lowest or any Tender will not necessarily be accepted. Two sureties for the performance of the works will be required, whose names must be given with the Tender. Quantities supplied

TO SEWER PIPE MANUFACTURERS, &c. The Local Board of Health for the District of Castle-Moors, in the County of Lancaster, desire to receive TENDERS for the SUPPLY of about TEN THOUSAND YARDS of SEWER PIPES, together with Junctions, Bends, Grids, &c. Specification and conditions may be seen, and forms of Tender obtained, on applicat. n to Mr. LIMBERLEY, Local Engineer, Blackburn. Tenders to be delivered at No. 11, Lion terrace, Portsea, not later than ELEVEN a.m. on THURSDAY, the 7th of APRIL. The lowest or any Tender will not necessarily be accepted. The Trustees must be prepared to find approved security for the due performance of the contract

TO ROAD MAKERS, EXCAVATORS, and BUILDERS.—TENDERS are required for CONSTRUCTING ROADS between Caw and at Treguddle, in the Counties of Cornwall and Devon. Parties desiring to tender for these Works, must leave their names at this office, on or before the 28th instant, and pay the sum of Ten Shillings and Sixpence for the hire of quantities and specification of the works, which will be delivered to each party immediately. The Secretary of state does not bind himself to accept the lowest or any Tender

Royal Engineer Office, Devonport, 18th March, 1864

TO BRICKLAYERS. — Notice is hereby given, that the Gravesend Improvement Commissioners will receive TENDERS for the SUPPLY of about 800 feet of 18-inch DRAIN-PIPES, and Thrown LAYING HOW and COMPLETING a good and efficient SEWER, in West-street, in Gravesend, together with Brick Gullies Traps, and Iron Street gratings, according to a plan and specification thereof, which may be seen at the Office of Mr. JOHN GOLDING, surveyor to the Commissioners, in Parrock street, in Gravesend. Tenders, sealed, marked "Tender for Sewers," must be delivered at my Office on or before the 4th day of APRIL next, and the Commissioners will consider the same on the following day, at TEN o'clock at the Town-hall, in Gravesend. The Commissioners do not bind themselves to accept the lowest or any Tender.

FRAS. SOUTHGATE, Clerk to the Commissioners.

Gravesend, 24th March, 1864

BLACKFRIARS BRIDGE. — Notice is hereby given, that the Bridge House Estate Committee will meet at Guildhall, London, on FRIDAY, the 22nd APRIL next, to receive TENDERS for TAKING DOWN and REMOVING the present BRIDGE at Blackfriars, and ERECTING a NEW BRIDGE in lieu thereof. The plans of the intended new bridge and specifications of the works to be executed, may be seen, and further particulars obtained, upon application at the Office of the Engineer, JOSEPH CUBITT, Esq. No. 37, Great George-street, Westminster, on and after MONDAY, the 21st MARCH instant.—The Tenders must be sealed up, addressed to the Bridge House Estate Committee, endorsed "Tender for New Bridge at Blackfriars," and left at the Comptroller's Office, Guildhall, London, before TWELVE o'clock, on FRIDAY, the 22nd APRIL next, and the parties tendering will be expected to be in attendance at Guildhall on that day, at ONE o'clock precisely. The Committee do not bind themselves to accept the lowest or any Tender that may be sent in.

Guildhall, March 5, 1864. FERDINAND BRAND, Comptroller.

NEW BLACKFRIARS BRIDGE.—Founders and Smiths wishing to TENDER for the above Structure can obtain information concerning bills of quantities, on application to Mr. JOSEPH SIMMONS, Devonshire Villa, Chipperfield, Herts, not later than WEDNESDAY next, 30th instant. It is to be distinctly understood that Mr Simmons is not connected in this matter with the Bridge House Estates Committee.

Chipperfield, Herts, March 22, 1864.

FURNESS and MIDLAND RAILWAY. CONTRACT for WORKS.—The Directors of The Furness and Midland Railway Company are prepared to receive TENDERS for the CONSTRUCTION of a DOUBLE LINE of RAILWAY, with Approaches, Works, and Conveniences from the Furness Railway, at Carnforth, to the North-Western (Midland) Railway, at Wennington, being a length of 9¾ miles, or thereabouts. The drawings of the proposed works may be seen on and after the 21st day of MARCH, at the Office of the Company's Engineers, Messrs. McCLEAN & STILEMAN, 22, Great George-street, Westminster, S.W. and Mr. J. S. CROSSLEY, Midland Railway, Derby; or at the Secretary's Office, Furness Railway, Barrow, in Furness. Contractors who wish to tender may obtain lithographed copies of the drawings, bills of quantities, specification, and form of Tender, on application to the Engineers, or at the Secretary's Office on and after the 5th of APRIL. Tenders must be addressed to the Secretary, 9, Old Burlington street, London, W. on or before the 4th day of APRIL next. The Directors do not bind themselves to accept the lowest or any Tender.

JAMES RAMSDEN, Secretary.

Barrow, in Furness, February, 1864.

ST. PETER'S WHARF, WESTMINSTER, TO LET on LEASE.—A Committee of the Governors of the Grey Coat Hospital will meet at the Hospital in Tothill Fields, Westminster, on MONDAY, the 4th day of APRIL next, at TWELVE o'clock at noon, to receive TENDERS from parties willing to TAKE on LEASE for twenty-one years from Midsummer next, all that WHARF and PREMISES, known as SAINT PETER'S WHARF, situate in MILLBANK STREET, Westminster, at the corner of Abingdon-street, and in the occupation of Mr. Helmore.—A plan of the Premises, and the terms for letting, and the drafts of the agreement and Lease, may be seen at the Office of Messrs. CREMPON & TROLLOPE, Solicitors, 31, Abingdon-street; and the plan and terms for letting, at the Office of Mr. W. R. GRITTEN, Surveyor, No. 8, Parliament street, Westminster. The Governors do not find themselves to accept the highest or any of the Tenders.

TO QUARRY PROPRIETORS, CONTRACTORS, GRANITE MERCHANTS, and OTHERS.—TO BE SOLD, in one lot, by PRIVATE TENDER, to be sent in on or before TWELVE o'clock on the 4th of APRIL, 1864, under "The Company's Act, 1862," with the approbation of the Judge of the Mayor of the Rolls (with a view to its immediate winding up), the valuable and important QUARRY GRANTS over the Commons and Waste Lands in Walkhampton, Dartmoor, near Prince Town, in the county of Devon; and also over the several Woods called Dewerstone Wood, Common Wood, and Cuddaford and Cuthworthy Woods, and a portion of Wigford Down, near Bickleigh, on the Plymouth and Tavistock Railway; held on lease respectively by the Haytor Granite Company, and in the working of which from 200 to 300 men have been hitherto employed; together with the Manager's House and Twenty Cottages, occupied by the workmen, at Foggintor, at the Dartmoor Quarries; the Company's Wharf, called the North Devon Wharf, in Saint Budeaux, in the county of Devon; the Factory, Workshops, Stables, and Sheds at Dewerstone, and the large Yard at Lairn, near the Iron Bridge over the Cutwater, Plymouth, with the Company's Workshops, Smithy, Offices, and other Buildings; and the right of shipping at the harbour of Catwater and at the river Lairn, near Plymouth, in the county of Devon And also the superior and costly Plant of DERRICKS, GUY CHAINS, RAILWAY WAGONS, ROLLING STOCK, MACHINERY, UTENSILS, together with the GOODWILL, CONTRACTS, STOCK of GRANITE, and ASSETS, of that important undertaking, the HAYTOR GRANITE COMPANY, which is now in course of liquidation by the official Liquidator appointed by the Court of Chancery, pursuant to an order to wind up the said Company, dated the 7th day of NOVEMBER, 1863, and the business of which Company is now being carried on solely with a view to a sale. Sealed Tenders to be sent in, addressed to R. P. HARDING, Esq. (the Official Liquidator), at his Office, 5, Bank Buildings, London, E.C. on or before TWELVE o'clock on the 4th day of APRIL, 1864. A deposit of 2,000l. will be required on the Tender being certified by the Chief Clerk of the Judge before whom the winding up order is attached; and, subject to the approval of the said Judge, a portion of the purchase money will be accepted in approved bills at approved dates, or in shares of any approved Company. Forms of Tender, parts, warrants, and locations of sales, and orders to view, may be obtained gratis, at the Office of the said Official Liquidator, who will give orders to view the property. Particulars and Conditions of Sale may likewise be obtained at the Offices of Messrs HARRISON, BEAL, & HARRISON, Solicitors, 19, Bedford-row, London, W.C.; and at the Office of Messrs. PALMER & CO. 34, Bedford-row, aforesaid; or at the Company's Works, Lairn, near Plymouth, Devon; and at the Royal Hotel, and the Union Hotel, Plymouth; and at the principal Hotels in Exeter; and at Messrs. GRANT & INNES, Writers to the Signet, Princes street, Edinburgh

GEORGE WHITING, Chief Clerk.

TO BUILDERS.—The Directors of the BUXTON HOTEL COMPANY (limited) are prepared to receive TENDERS for the ERECTION of their HOTEL, on a plot of ground adjoining the Railway stations at Buxton, Derbyshire. The Plans, Specification, and Condition of Contract may be inspected at the Office of the Architect, No. 4, Lancaster-place, Strand, London; or at his Office at Buxton, on and after MONDAY, the 7th instant, between the hours of TEN and FOUR o'clock. The bills of quantities have been prepared by Messrs. KELCH & ATKINSON, of No 10, Lancaster-place, Strand, and are now ready for delivery, on payment of 3l, which sum will be returned to the respective parties after their Tenders have been received. The Tenders are to be in the form provided, and are to be delivered at the Office of the Company, No. 4, Lancaster-place, Strand, London, on WEDNESDAY, the 30th day of MARCH instant, at TWELVE o'clock, sealed and endorsed "Tender for Hotel, Buxton," and addressed to the Secretary. The Directors do not bind themselves to accept the lowest or any Tender; and the party whose Tender may be accepted must, if required so to do, provide two approved sureties for the due performance of the Contract.

HENRY CURREY, Architect.

4, Lancaster-place, Strand, W.C. March, 1864.

BARNSLEY LOCAL BOARD of HEALTH. WATER-WORKS DEPARTMENT.—CONTRACT No 3.—To CONTRACTORS for RESERVOIRS, &c.—The Barnsley Local Board of Health are desirous to receive TENDERS for the formation of a large STORE-LAKE RESERVOIR (or Reservoirs) to contain about 70 acres of water, near Ingbirchworth, about two miles from the Penistone Station on the Manchester, Sheffield, and Lincolnshire Railway, in the West Riding of the county of York. Together with Waste Weir, Tunnel, Roads, Filter Beds, and other constructions. Drawings and specifications may be inspected at the Office of Mr. RICHARDSON, Surveyor of the Local Board, St. Mary's-place, in Barnsley; and at the Office of Mr HAWKSLEY, Civil Engineer, 30, Great George-street, Westminster, on and after the 21st day of MARCH instant, where also bills of quantities and other particulars may be obtained, on payment of two guineas for the same. Tenders must be delivered at my Office on or before TUESDAY, the 5th day of APRIL next, but the Local Board do not pledge themselves to accept the lowest or other Tender.

By order,
WM. H. PEACOCK, Clerk to the Local Board.

LIFE DEPARTMENT.—Under the provisions of an Act of Parliament, the Company now offers to new Insurers EIGHTY PER CENT. OF THE PROFITS, either at QUINQUENNIAL DIVISIONS, OR A LOW RATE OF PREMIUM without participation of Profits.

Since the establishment of the Company in 1821, the sum net of Profits allotted to Assurers has realized in Cash value 800,000l. which represents equivalent Reversionary Bonuses of 1,058,900l

After the Division of Profits at Christmas 1859, the Life Assurances in force with existing Bonuses thereon, amounted to upwards of 4,713,0l of the Income from the Life Branch 207,000l per annum, and the Life Assurance Fund, independent of the Capital, exceeded 1,018,000l.

FIRE DEPARTMENT.—Insurances are effected upon every description of property, at home and abroad, at moderate rates.

No expense is incurred in effecting a New Insurance beyond the payment of the Annual Premium and Duty, when the Premium amounts to 5s

Claims liberally and promptly settled

Notice is hereby given, That Fire Policies which expire at Ladyday must be received within fifteen days at this Office, or with Mr. SAMS, No. 1, St. Ann's-street, corner of Bridge-row, or with the Company's Agents throughout the kingdom; otherwise they become void

Applications for Prospectuses and Agencies to be made to the Secretary.

SECRETARY—George William Lovell.
ASSISTANT SECRETARY—John J. Broomfield.

Insurances against Loss by Fire are effected by the Phœnix Company upon every description of property, in every part of the world, on the most favourable terms.

The promptitude and liberality with which its engagements are always met by this Company are well known; and the importance of its relations with the public may be estimated from the fact that since its establishment it has paid more than Eight Millions sterling in discharge of Claims for Losses by Fire.

Insurances with this Company expiring at Ladyday must be renewed within fifteen days thereafter, or they will become void.

Receipts are now ready at the principal Offices, Lombard-street and Charing-cross, and with the respective Agents throughout the United Kingdom.

The price is 2*s.* 6*d.*; those who have no account open with W. D. & Co.; but persons desirous of opening an account, on giving satisfactory references, can have a copy posted free.

Prices current of Timber and Deals are issued monthly, and may be had on application.

TERRA COTTA and Fine STONEWARE POTTERY, warranted to stand Frost.

JOHN M. BLASHFIELD, STAMFORD POTTERY, STAMFORD, LINCOLNSHIRE, has greatly improved and economised the manufacture of TERRA COTTA and Fine STONEWARE for ARCHITECTURAL PURPOSES. He is able to make it of various new colours, so as to harmonize with Marble, Portland, and other Stones, and equal in hardness to Granite.

A Medal at the International Exhibition was awarded, in Class 10, Section C, Architectural Objects, for "Perfection in manufacture and beauty of form." A Medal was also awarded for "Terra Cotta."

Moulded Bricks, String Courses, Copings, Cills, Tracery, Balusters, Capitals, Crosses, Terminals, Vases, Statues, Brackets, Consoles, Garden Edging, Guttering, six, nine, and twelve inch Paving Tiles, &c. &c.

Also Plain and Mosaic Pavements for Halls, Churches, Conservatories, &c. in all colours.

London Office, 377, Oxford-street, W.

MINTON, HOLLINS, & CO. Stoke-upon-Trent, beg to inform architects, the gentry, and others, that in consequence of the increasing demand for their Encaustic and Mosaic Pavements, and with the view of facilitating the execution of orders, they have opened an additional Show-room, at their Establishment, No. 50, Conduit-street, London, where experienced draughtsmen will be constantly in attendance, to afford all information required.

DRAWINGS and ESTIMATES, on the receipt of plans, will also be promptly furnished, on application at the Manufactory, Stoke-upon-Trent.

MINTON & CO. take the present opportunity of stating that they have always in stock a large and varied assortment of tiles, suitable for flower boxes, stoves, and other ornamental purposes.

TO BUILDERS, BRICKLAYERS, and OTHERS.—The following goods are at all times ready for delivery at SCALES & CO.'S Pottery and Tile Kilns, near the four mile-stone, Green Lane, Stoke Newington, Middlesex, at the lowest cash prices.

Edging Tiles.	Drain Pipes and Tiles.

Also Chimneys from 2 feet to 6 feet and Garden pots of every description.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION, 1862.

IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO.'S Pattern-book, designed by M. Digby Wyatt, esq. together with a special estimate and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, frieze, &c. will be sent on application to Benthall Works, Broseley, Salop.

May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.

London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

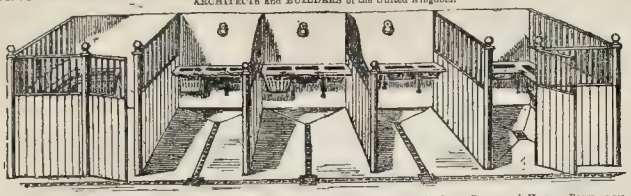
PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf, Macclesfield-street North, City-road Basin, N. Kindly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and 3rdly, that the "Reports of the Juries," page 581, of the Great Exhibition, 1851, note the Medal of a Plumbeian Metal, and rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION

MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts; the Prize Medal at the Great Exhibition, 1851; Two First-class Medals at the Paris Exhibition; and Two Prize Medals at the International Exhibition of 1862.

The only imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.

Chimney-pieces, Bijou tables, Table-tops, Baths, Wall linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works, 39 and 40, Upper Belgrave-place, Pimlico, S.W.



STONE BALUSTRADES.—To BUILDERS and OTHERS.—Any Person having from TWO HUNDRED to THREE HUNDRED, in good condition, may hear of a purchaser, by sending full particulars, price, &c. to Messrs. NISSEN & PARKER, 44, Mark-lane, E.C.

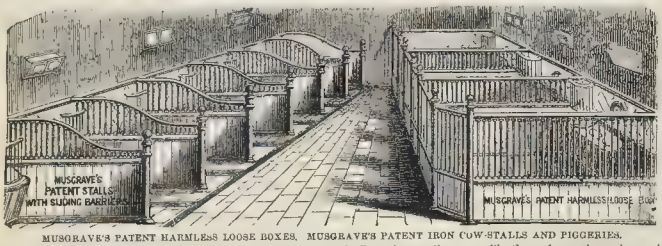
BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES.

BARTON'S PATENT PRIZE MEDAL STABLE FITTINGS.

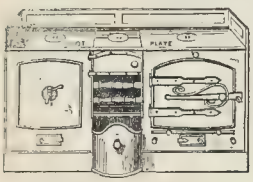
These SUPERIOR-CLASS STABLE FITTINGS are PATRONIZED by the PRINCIPAL NOBILITY, and ADOPTED by many of the FIRST ARCHITECTS and BUILDERS of the United Kingdom.



J. BARTON solicits attention to the NEW STABLE just completed, with full size Stalls, Loose Boxes, and Harness-Room, now open for inspection, at the Manufactory, 370, Oxford-street, where an extensive assortment of all kinds of Stable Furniture, upon the most modern and improved principles, are to be seen.
A new Illustrated Catalogue, with numerous engravings of the improved method of fitting up Stables, forwarded on receipt of four stamps.

JAMES BARTON, IRON WORKS, 370, OXFORD STREET, LONDON, W.

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.



MUSGRAVE'S PATENT STABLE AND HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES, MUSGRAVE'S PATENT IRON COW-STALLS AND PIGGERIES.

Architects who have not seen these Fittings are requested to write for Engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition. They can be seen in first class stables in almost every county in England and MUSGRAVE, BROTHERS, are now fitting several very large establishments under directions of London Architects, noted for adoption ; only what is the best of its kind. Particulars of these, as well as of MUSGRAVE'S PATENT SLOW-COMBUSTION STOVE, will be forwarded on application to

MUSGRAVE, BROTHERS, ANN STREET IRON WORKS, BELFAST.

THE LEAMINGTON PRIZE KITCHENER.

These Ranges are strongly recommended for Economy, Cleanliness, and a Cure for Smoky Chimneys.

The Top forms an entire and efficient Hot Plate, and having an Open Fire, removes all the objections of a Close Fire-range.

A large STOCK of SELF-ACTING and other RANGES, REGISTER STOVES, and every description of BUILDERS' IRONMONGERY, at Wholesale Prices.

All Goods delivered free within Five Miles.

BURT & POTTS,

WHOLESALE AND MANUFACTURING IRONMONGERS,
38 and 65, York-street, Westminster.

BROWN & GREEN'S

PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices ; and when fitted with Bath and Steam Apparatus, &c. they form the most complete appointment for good establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

72—74, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept. 6, 1862.

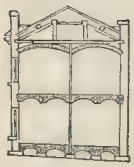
NOTICE TO ARCHITECTS AND THE TRADE.

WEST-END BRANCH, EGYPTIAN HALL, PICCADILLY.

J. DEFRIES & SONS,

GAS ENGINEERS AND MANUFACTURERS OF

CRYSTAL, BRONZED, AND ORMOLU CHANDELIERS, IMPROVED CRYSTAL STAR AND SUN LIGHTS,



For Lighting and Ventilating Public and Private Buildings.

J. D. & SONS beg most respectfully to inform Architects and the Trade, that having been solicited to open a West-end Branch, they have taken the DUDLEY GALLERY, EGYPTIAN HALL, PICCADILLY, and at an enormous outlay they have made it replete with every description of lighting mediums, including REGISTERED DESIGNS of MEDIÆVAL GAS-FITTINGS, CRYSTAL, BRONZED, ORMOLU, and ELECTRO-PLATED Chandeliers, Brackets, Vestibule Lights, Bronzed and Gilt Statuettes.

SPECIAL DESIGNS PREPARED in perfect ACCORDANCE WITH Architectural Arrangements. Estimates furnished FOR THE LIGHTING and Fitting up of Theatres, Music halls, and Public or Private Buildings with Gas, &c.

The usual trade discount allowed, as at their

MANUFACTORY and CITY SHOW ROOMS, 147, HOUNDSDITCH, CITY.

THE DENNETT ARCH.

Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome ; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.

Address to the Patentees,—A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength, and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.

"GEO. GILBERT Spring Gardens London."

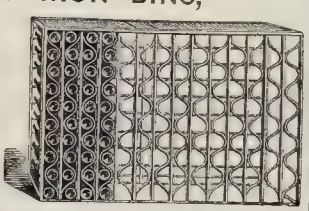
WROUGHT IRON WINE BINS.

FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING nearly FORTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.



Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom.

*** As these Bins were the invention of the late Mr. FARROW, and great attention has been given to them by the present Firm, long practical experience enables FARROW & JACKSON to offer the best advice as to arrangement.

ALSO THEIR

NEW REGISTERED IRON BINS,

ade any size or shape, to fit any spare corner, with
SEPARATE REST FOR EACH BOTTLE,
Peculiarly adapted for Private Cellars.
o laths are required, and all trouble of Binning avoided. The Cellular Bins may also be had ted with light lattice doors, affording perfect security to the contents of the Bin.

BUNNETT & CO.

PRIZE MEDAL, GREAT EXHIBITION

FOR

REVOLVING IRON SHUTTERS.

No. 1.—Patent, Bank Quality, with best Worm and Wheel Gearing, 6*s.* per foot.

No. 2.—Patent, for Shops and Offices, with best Chain Gearing, 5*s.* per foot.

No. 3.—Patent, for Private Houses, without Gearing, raised and lowered with Balance Weights, 3*s.* 6*d.* per foot.

BUNNETT & CO. invite the attention of Architects and Builders to their recent Improvements in LIGHT REVOLVING IRON SHUTTERS for the WINDOWS of PRIVATE HOUSES, raised and lowered with graduated balance weights, without any gearing.

A matured experience, extending over twenty-five years, has convinced the Patentees that *no permanent dependence can be placed in any other*

SYSTEM OF

SELF-COILING SHUTTERS.

BUNNETT & CO.'s

Widely-known and well-appreciated

BANK SHUTTER

requires no comment, as it is in use in a large majority of the Banking Establishments, Goldsmiths' Shops, and Public Offices of the United Kingdom and the British Colonies; but the Patentees wish to make it known that they have recently completed extensive Additions to their

WORKS AT DEPTFORD,

and have erected new and most powerful Machinery with the view of meeting the largely-increasing demand for the

REVOLVING IRON SHUTTER,

With all necessary Despatch.

LONDON OFFICE,
17, QUEEN STREET, CITY;
GLASGOW OFFICE,
199, BUCHANAN STREET.

THE GREAT FIRE IN THE CITY.—"A closer examination yesterday of the track of the recent fire in Wood-street, shows in a striking manner how much it was confined to a class of buildings the interior arrangements and means of communication of which appear to have been made in defiance of ignorance of the principles which now regulate such matters, under the operation of the Metropolitan Building Act. The warehouses and offices which have perished seem to have been separated from each other by thin lath and plaster partitions for the most part, and only in one instance was there an iron door between one part of the interior of the same building and another, such as is now commonly used and made imperative, indeed, in the construction of warehouses, as an invaluable means of shutting off communication in case of fire. That iron door, too, which retained unopened, would have been completely effectual in arresting the flames in that direction, had they not penetrated by a vulnerable point into the part of the building which it protected.

THE USE OF IRON FOR SAFETY AGAINST FIRE was most conclusively proved by a very remarkable circumstance. The large and handsome warehouses of Messrs. J. & R. Morley, situate at the corner of Gresham and Wood Streets, overlooked by a large window on the ground floor at the back the little court in which the fire originated, and to which it was at first confined.

THIS LARGE WINDOW WAS PROTECTED ON THE OUTSIDE BY A REVOLVING IRON SHUTTER, AND THAT MORE AGAINST ROBBERY THAN FIRE.

On this occasion for some time the flames played fiercely, but harmlessly, about the outside of the window so guarded by the iron shutter. Had they once entered Messrs. Morley's premises at that point, the stock stored inside, and estimated at from 250,000*l.* to 300,000*l.*, would inevitably have been destroyed, if, indeed, the devastation would have ended in that the vast pile of buildings. Upon such a slender condition of safety did property almost fabulous in value, and belonging to a single firm, depend in this case."—*Times*, 22nd December, 1864.

THE REVOLVING IRON SHUTTER THAT ARRESTED THIS FIRE WAS MANUFACTURED IN 1849, BY

BUNNETT & CO., Patentees,
London & Glasgow.

Wheelwrights and Contractors—1, Dean-street, Oxford-street, and Parker's-row, Bermondsey.

THE TIVIDALE COMPANY, LIMITED,

Having purchased the business of the well-known firm of JOHN H. PORTER & CO. of the Ebro Works, Tividale, and late of Birmingham, are prepared to undertake the Manufacture and Construction of all kinds of WROUGHT and CAST IRON WORK.

The class of work contracted for and manufactured by the late Firm has consisted chiefly of Iron Bridges (among others the Lambeth Suspension Bridge in London), Iron Roofs, Sheds, Stores, and Lighthouses; Iron Columns, Girders, and Fire-proof Floors; Smiths', Founders', and Boiler-makers' Work generally.

The Works at Tividale, near Dudley, are situate in the heart of the Iron and Coal District of South Staffordshire, thus conveniently placed for delivery to the several shipping ports—London, Liverpool, Hull, Gloucester, and Bristol.

The Messrs. PORTER continue their personal superintendence, as Managing Directors, in London and at Tividale; and it is hoped that the Company will enjoy a continuance of those favours hitherto so liberally extended to the late Firm.

MANUFACTURERS, BIRMINGHAM.

THE PATENT UNIVERSAL CHIMNEY HEAD.

This Chimney Head has been designed for the Prevention of Smoky Chimneys and Down Draughts. The numerous side apertures are so placed as to guide the wind upwards, so it strikes the head from any quarter, thus creating a strong current, and assisting the exit of the smoke through the top. The same apertures give ready egress to the wind on all sides in case of its striking downwards from above, and thus greatly diminish the danger of its passing down the chimney.

Price in Zinc ..... 23s.
Ditto, Kitchen size..... 32s.
Price in Galvanized Iron 33s.
Ditto, Kitchen size..... 35s.

A Liberal Allowance to the Trade.

Manufactured solely by

And to be obtained of all respectable Ironmongers in London and Country.

SMOKY CHIMNEYS.

S. DEACON

Respectfully invites the attention of Architects Builders, &c. to his

PATENT LOUVRE CHIMNEY CAP,

which has been in use some time with perfect success, many curing chimneys where other caps have been of no avail!

The advantages attending this Cap are—it can be thoroughly cleaned by the machine with the chimney is swept, the brush being able to pass through the Cap without the liability of misplacing it; an increased up current, and the impossibility of a down one.

Prospectus, with testimonials, forwarded on receipt of Postage Stamp, by

FERGUSSON'S MODERN ARCHITECTURE.

Now ready, with 412 Illustrations, 1 vol. 8vo. 21s. 6d.

A HISTORY of the MODERN STYLES of ARCHITECTURE.

By JAMES FERGUSSON, F.R.S.

"This volume forms one of the best comprehensive accounts of architecture extant in any language. The conciseness yet clearness of the style shows the author to be thoroughly master of his subject, and the judicious use of the volume, together with the excellence and number of the illustrations, make it a book which must find a place on the shelves of every architect's library."—*Civil Engineer and Architect's Journal.*

"A volume which those who have travelled, and to whom the greater part of the buildings cited are well known, will appreciate as a convenient handbook for reference, either to refresh their memories, or for the purpose of comparison, and one which will be even more valuable to those who have never wandered from home, and who find here a conveniently accessible storehouse of information."—*The Art-Journal.*

"Mr. Fergusson has now completed the 'History of Architecture' of which he published two volumes some three or four years back. The present volume is nevertheless a distinct work, because it is confined exclusively to the architecture of the last three centuries; and it is no less novel than distinct, for, practically speaking, we may affirm that no one previously has treated of modern architecture as a whole, or has attempted to criticise its achievements example from a comprehensive point of view."—*Times.*

USEFUL INFORMATION for ENGINEERS.

THE APPLICATION of CAST and Wrought Iron to Building Purposes. Third Edition, nearly ready.

London: LONGMAN, GREEN, & CO. Paternoster-row.

The Fourth Edition, in One Volume 8vo pp 1,104, illustrated with 1,812 Engravings on Wood by R. Branston, from Drawings by J. S. Gwilt, price 42s. cloth,

GWILT'S ENCYCLOPÆDIA of ARCHITECTURE, Historical, Theoretical, and Practical.

"It should be possessed and used by every architectural student."—*Builder.*

London: LONGMAN, GREEN, & CO. Paternoster-row.

New Edition, with 89 Woodcuts, in fcp. 8vo. Price 6s.

CATECHISM of the STEAM-ENGINE, in its various Applications to Mines, Mills, Steam-Navigation, Railways, and Agriculture. With Practical Instructions for the Manufacture and Management of Engines of every class.

By JOHN BOURNE, C.E.

Author of "The Artisan Club's Treatise on the Steam-Engine," of which the Fifth Edition, greatly enlarged, with 37 Plates and 546 Woodcuts, may now be had in 4to. Price 42s.

London: LONGMAN, GREEN, & CO. Paternoster-row.

New and enlarged edition, 1864. 2s.; in case, 3s 6d.

BIDDER'S EARTHWORK TABLES, showing the Contents of Excavations, Area of Slopes, &c.

By G. P. BIDDER, Esq. C.E.

London: VACHER & SONS, 29, Parliament-street.

THE LAND SECURITIES COMPANY

(Limited).

Capital, £500,000.

DIRECTORS.

His Grace the Duke of Marlborough, President.

The Directors of the International Financial Society (Limited), acting as a Finance Committee.

John Ennis, esq. M.P.
Sir James Fergusson, Bart. M.P.
Col. Fulke Southwell Greville, M.P.
Sir John Charles Dalrymple Hay, Bart M.P.
James Mackie, esq. M.P.
Sir Laurence Palk, Bart. M.P.
Sir Henry Stracey, Bart. M.P.
William Dargan, esq.
Henry Farquhar, esq.
Sir John Gray.
Henry Kingscote, esq.
John Horatio Lloyd, esq.
Hon. William Napier.
Hon. Henry Petre
Sir Charles Rich, Bart.
Philip Twells, esq.

OFFICES.—Chief Office, West End, 32, Charing-cross, S.W.; Branch Office, East End (54, Old Broad-street, E.C.), Office of International Financial Society.

The Company will make advances, repayable with interest, at fixed terms, or by instalments, or by terminable annuities, upon the security of

1st. Of landed estates, first-class house-property, and real property of all descriptions and tenures, and of all estates and interest therein.

2nd Of rates, dues, assessments, and impositions of all descriptions, raised or imposed by or under the authority of any Act of Parliament, public or private Royal Charter, Commissions of Sewers, Drainage, or other sufficient legal authority.

3rd. Of charges and securities of all descriptions upon or affecting landed estates, and all real property and tenures, made, given, or issued, under the authority of any Act of Parliament, public or private.

Temporary advances will be made on landed estates, and on houses in course of erection, with or without the deposit of title deeds; and they undertake the negotiation of special investments

For further information, and forms of application, apply to the Hon. WILLIAM NAPIER, Managing Director, the Land Securities Company (Limited), 32, Charing-cross, London, S.W.

NO SHUTTER BARS.

JENNINGS'S SHOP-SHUTTER SHOE.

SHOP SHUTTERS are SHOD and SECURED by the above, at HALF THE COST OF THE UNSIGHTLY AND DESTRUCTIVE SHUTTER BAR Shops referred to in every public street in London. When ordering the above, send FINISHED THICKNESS of Shutters, and the way they go up.

Sold by all Ironmongers, and the Inventor,
GEORGE JENNINGS,
Engineering Depot, Palace Wharf, Stangate, Lambeth, S.

The Builder.

VOL. XXII.—No. 1103.

Water.

THE saying of the great Charles V. of Spain, "that a man gains another soul for each additional language he acquires," has a strong competitive examination smack. With perhaps more truth it may be said, that each soundly understood branch of ysical science confers an additional sense to investigator of nature. Hundreds of phe-nena, misunderstood or even unnoticed by utored eyes, are to such as have the know-ge a source of pleasant observation, and even metimes of useful adaptation. But some ning and thought are required before a man somewhat understand even apparently very ple phenomena. Take, for instance, such a ningly simple and commonplace thing as er. If the history of science may be said epresent on a large scale the history of its dual acquirement by each average student, a lesson to recollect with what difficulty the , to us, very simple properties of this liquid e been reduced to known laws. When we emember that mankind have been for several usand years in the laboratory of nature, it is ewhat humiliating to human intellect to see slowly our present knowledge has been ac-ed, and how much yet remains to be attained. scarcely eighty years ago that Watt demon-ted the chemical composition of water. It nly within historical times that another t engineer proved that a body plunged water lost a portion of its weight equal amount to that of the displaced water. little more than two hundred years that have understood why the 15 pounds on the re inch pressure of the atmosphere should nce some 32 feet of water. It is just 200 s ago that Blaise Pascal showed that liquids s equally in all directions, and that the per-dicular pressure of water on any vertical, que, or horizontal surface, is equal to the ght of a column of the liquid whose base is l to the surface pressed, and the height of ch is equal to the depth of the centre of ity of the surface below the upper horizontal ace of the liquid. It is less than seventy s ago that Bramah patented his application he principle discovered by Pascal, in the of the hydraulic press, the first of which is preserved in the Museum of Patents at sington. It would really appear that this rostatic law has scarcely found a popular ptance with us. Now a cubic foot of water hs 62½ lb., and it therefore presses with weight upon the square foot of water below nd if anything could conduce to the spread of owledge of this hydrostatic law, it should be ate horrible disaster at Sheffield. As we stated week, the height of the water in the reser-was about 90 feet, so that there was a pres-of nearly 2¼ tons on every square foot of nd at the bottom of the reservoir. And yet of the daily papers asserted that the base of the embankment was only 40 feet wide. Such an embankment could not have stood this enormous pressure for five minutes. Our very able contemporary, the *Saturday Review*, appears to have fallen into an opposite mistake, and writes that—"a hundred million gallons of water were poised in mid air," and "we shall soon know what barrier the engineers interposed between this *dead weight* and the hollow valley below." An embankment would, of course, *cæteris paribus*, have to undergo just as much pressure from a foot in width of water as from a lake a mile in width, as the pressure depends merely upon the height of the head. Perhaps it is somewhat difficult to form a definite image before the mind's eye of a liquid thus pressing in all directions and in proportion to its depth; we may see it physically demonstrated, but the internal action and reaction of the invisible particles are hidden to the sight. It might, perhaps, be made clearer by supposing water to consist of an infinite number of small perfectly-shaped spheres of a hard and incompressible substance, like that of the diamond, and, at the same time, with a similarly polished surface. We could imagine that the contents of a vessel full of an assemblage of such polished spheres would, if emptied on the ground, disperse themselves in all directions, instead of forming a solid heap. A single sphere in the vessel would press in all directions, but its weight would tend to solicit it more especially in a downward direction—and *seriatim*. The pressure of the whole assemblage of spheres on the sides of the vessel would thus increase towards the bottom. Given that a volume of such minute incompressible balls has the faculty of at once transmitting a pressure in all directions, then the pressures thus transmitted to the sides of a vessel are in proportion to the areas of the surfaces. This law thus answers to the principle of virtual velocities; for, supposing two cylinders of unequal sizes and joined together, in each of which is a piston, if the smaller piston be set in motion in order to propel the larger one, the small piston will have to move through a proportionately greater distance. If the small piston be 1½ inch in diameter and the larger 10 inches, while the small piston is propelled with a force of (say) 36 lb., the 10-inch piston, by the motion of the smaller one, will have transmitted to it a pressure of 1,600 lb. But while the small piston is being moved 6 inches, the larger one will move very little more than one-tenth of an inch. This is the whole principle of the hydraulic press. We have assumed the minute spheres of which water may be made up to be incompressible. Water was believed incompressible, until Oersted, the Danish philosopher, first *accurately* proved that its volume could be diminished by pressure. The amount is, however, so small, that it is never practically taken into account, as a column of water of a sectional area of one square inch is only compressed to an amount corresponding to 50 millionths of its volume, by a pressure of 15 lb., or of one atmosphere. Heat might be assumed to act as a lubricant between our supposed spheres, and when the temperature is lowered they cohere together and assume the form of crystals. The water expands during this act. It has been found that 10 cubic feet of water weigh about the same as 11 cubic feet of ice. When only a cubic inch of water crystalises into the form of ice, the increase of bulk it undergoes appears to exert a force of about 13½ tons within its range of expansion. This silent, but almost irresistible action, would not be without its influence on an ill-made embankment. The most insidious agent, however, in the weakening of hydraulic structures, is that somewhat mysterious and, at any rate as yet, incompletely investigated power known under the name of capillary attraction. It is a matter of daily observation that, for instance, a heap of sand or ashes, or a common wall, when placed in communication with a plentiful supply of water, is found to draw up the moisture, often to a great height. When dry sand is thrown upon damp ground, the moisture is also thus drawn up; and some gardeners use this principle for preserving plants during wet seasons, by throwing sand or the waste of heckled flax round the stems. By dipping a strip of blotting paper in a tumbler of water, the liquid can be thereby conducted from thence into an empty vessel. Numberless other phenomena, such as the elevation of oil or grease by the wick of a lamp or a candle; the similar action of a piece of sugar or a sponge on water, of blotting-paper on ink; of the piece of wick used to conduct the oil from the oil-cup to an axle bearing; the action of a dry towel or handkerchief, are all referable to the same principle. The mechanical power of capillary attraction is astonishingly great; and a piece of wood, when swelling up from this cause, can tear its iron bands asunder. As the fibres of ropes are twisted spirally, when they are soaked with water they swell up and get shorter, in the same way as new linen is liable to shrink when washed for the first time. The great power exerted by the contraction of ropes when wetted rendered, as will be remembered, great service in the raising of the large obelisk in front of St. Peter's, at Rome. When the outside interstices of the bodies we have named are closed up, capillary attraction is no longer present, and it is upon this principle that ropes are tarred, paper is sized, wood is painted, leather is greased, and that nature has provided the hair and wool of animals, and particularly the feathers of aquatic birds, with a film of grease to keep out the moisture. The fat clays used for the puddle-walls of water-embankments simply carry out the same function; and being, when properly puddled, impermeable to water, act as a protection against the disintegrating influence that the water would otherwise have on the main earthenwork structure behind. Earthwork, even when dry, if not well consolidated, exerts a side pressure,—like that of, for instance, grain,—the laws of which were first investigated by Coulomb. Already a semi-fluid, earth, when damp, and then soaked with water, gradually approaches the state of physical cohesion of water itself, and at last unites in the same current. If, indeed, any inert agent with which we deal can be called treacherous, it is certain that water can be so termed. It is not inconceivable that an entire hill, much less an artificial embankment, could be blown up by means of the pressure of water. If we imagine an internal reservoir, at a couple of hundred feet depth, and in communication with a head of water, by means of a crevice, the five tons or more on the square foot corresponding to such a weight of water must exert a powerful action on the cohesion of a mass, however large. When to this are added the searching influences of capillary attraction, it is scarcely possible to conceive any substance with sufficient cohesion to resist such a power. A mere hole of a water-rat could thus lead to a water-dam being blown up.

When we look back and see for what a comparatively short time merely the law governing the hydrostatic pressure has been understood, it is obvious that many more hidden questions yet wait for a solution.

It is scarcely to be doubted, for instance, that very many of the relations of water to heat, and when water assumes the form of steam, still offer fields for discovery. There is every reason to believe that the usual explanation of the phenomena attending the boiling of water is completely false. Mr. Grove, the distinguished physicist, in a lecture delivered last year before the Chemical Society, and in another read before the Royal Institution in January last, goes so far as to state that water never has been what is termed "boiled;" that its particles never have

been expanded by heat in the way generally explained in lectures on natural philosophy, and in works on the same subject. It appears that it has been impossible up to the present time to completely separate water from atmospheric air, or from nitrogen gas. In proportion, however, as water is deprived of air, the ebullition assumes quite a fresh shape, and it boils intermittently, with *sombresauts*, while the water reaches a temperature much higher than its usual boiling point. Mr. Grove found it impossible, by all the means in his power, to separate water from more or less nitrogen. He is inclined to think that the boiling of water cannot take place at all in the absence of some gas or other, and that even "if water, for instance, could be absolutely deprived of nitrogen, it would not boil until some portion of it were decomposed: that the physical severance of the molecules by heat is also a chemical severance." He found that after depriving water of air to the utmost practicable extent, that it "becomes avid for air." Thus, after "boiling" off many thousand tons of water in order to get mechanical power, we are met by a mystery in striving at an explanation merely of the physical aspect of the phenomenon.

There are thus undoubtedly many yet hidden agencies at work around us, but science has at least taught us to allow a margin for our ignorance. We do not understand why the particles of a piece of iron cohere together, but we wisely make a girder four, six, perhaps eight times the strength that it will ever be called upon to bear.

We leave our readers to apply these statements.

THE ARCHITECTURE OF PARIS UNDER NAPOLEON III.*

IF the reader of this and the preceding article, suggested in part by Mons. César Daly's work, were able to have before him a plan of Paris distinguishing the new routes, he would observe as one characteristic of the improvements, that those routes have been designed and formed radiating in direct lines from centres, and so that they intersect the older streets for the most part obliquely. The arrangement may be inconvenient to those who are accustomed to a rectangular disposition of streets, like that of many capitals,—as it is to those coming from London, whose walks may have familiarized them chiefly with such a district as Marylebone; but supposing the chosen centres to have been, or to be likely to be, established by position of public buildings, or otherwise by resort for pleasure or affairs, and that some little attention be given preliminarily, by the inhabitant or traveller, to study of a plan, the arrangement is in every respect the best that could be adopted. The Bank, the Post-office, Charing Cross, Covent Garden Market, and each railway station, might at once be fixed upon as amongst the centres in London: but routes do not now radiate from those points in direct lines; much time is therefore lost, as in getting from a place of business to the place of residence, and from and to the stations. Sir Christopher Wren's plan recognised the principle of lines radiating from centres; and the disposition of new Paris is an application of that principle to an entire metropolis.

Looking also at the plan of Paris, it would be seen, that the entire area is dotted with open spaces, chiefly circular, these being at centres of junction such as have been referred to. The Place de l'Etoile, the Rond Point des Champs Elysées, the Place du Trône, the Place des Victoires, and the Place de l'Europe are some of them. In those of most recent date, there is sameness from decorative features of surrounding houses; for, everything has been hurried on so fast, that the powers of even French architects, in design, have not been able to keep pace: but these circusses, or *ronds points*, are, no less than the oblique and radiating lines, established on correct principle. Any one who watches the traffic that crosses the circusses of Regent-street, will hardly fail to come to the conclusion, that their only error of plan is in being now too small. It has been the practice to abuse Nash for that which certainly he was not very skilful in: it has been equally the practice to neglect every lesson of street-planning, as also of architectural effect in massing of buildings, that his works abound in.

When lines intersect obliquely, and as must often be the case, at every variety of angle, a circular space is a means of mitigating what might be an eyesore. There will be at the north end of Blackfriars Bridge, such an intersection of oblique lines as we have referred to, formed by Bridge-street, the line of the embankment, and the new street to the Mansion House. The last-named line is intersected at its starting-point, again obliquely, by the London, Chatham, and Dover Railway. Yet we hear that Mr. Haywood,—who has well studied the subject, in Paris, and generally,—has great difficulty in getting his argument of the desirableness of a circus, accepted. We believe he is disposed to suggest a similar circus at the point where his new level of the Holborn Valley crossing would end westward, or where several streets including Hatton Garden will fall in obliquely, and where the great width of Holborn would suddenly commence. He has been heard to say that a monument or resting-place in the centre of such an area, is worth the services of two or three policemen in guiding and distributing traffic. The effect which may be observed, of the statue at Charing Cross, and of that at the end of King William-street, shows that such is the case.

We have no intention, however, to be led away by the present interest, and indeed importance to London, of the general subject of the planning of lines of route, from the particular subject of the architecture of Paris decoratively considered, and from the examples of structures of the domestic class. Be it only observed, that however it might be possible in a new town, to arrange concentrically the streets which are transverse, or to plan them with an obliquity to the radiating lines that would be inappreciable, and scarcely operative disadvantageously on architectural effect,—as in the case of the town of Fleetwood-on-Wyre laid out by Mr. Decimus Burton,—the matter is very different in an old city having the original lines mostly rectangular.

Thus, from all causes, there are in Paris, a multitude of new buildings on plots of ground of which the lines of two of the sides would meet in an acute or an obtuse angle. In many cases the plot has not any right angle. Wherever radiating lines are cut by a circus, the angles will be acute, or obtuse, as the circle may be small with radiating lines, many or broad in proportion to the circumference, or may be large with few in proportion; and in one of the two corner plots where one street enters another obliquely, the angles are necessarily obtuse. Of course, this characteristic of plan leads to every device of canting and rounding off corners, and of boldly meeting the difficulty of architectural effect, by placing prominent features, as balconies, in addition to the entrance, at the angle. But there is, after all, in the architecture of Paris, sameness in the treatment of balconies; whilst occasionally at the circusses, contrast between frontages, or cants, narrow in some of the cases, and broad in others, where the circus might seem to dictate symmetry, lessens the general effect.

At first, it would seem that an obliquity to the street, of the lines separating properties, must extend from end to end of the new line; but so much ground has been taken, and the whole has been so much remodelled, and the new buildings are most of them so large, that any obliquity of this extent, scarcely deserves consideration: there are however numerous buildings with two frontages, not only in cases of the houses next but one to a circus, but in those where a new street of great width has been placed between two previous streets, as the Boulevard de Sebastopol has between the Rue St. Denis and the Rue St. Martin; which streets, with the *boulevard*, run north and south. Thus where there are frontages both ways, the plot has often a twist or angle in it, midway.

From each of such peculiarities of figure, and from the necessity of economising ground, whilst getting some central area for light, there results, especially in these angle plots or blocks of building, an amount of contrivance in internal planning, for which, excepting as to one matter of detail, the French architects deserve the highest praise. The exception in our opinion to be made, is that of staircases. These most important parts of a building are planned certainly not worse than the staircases of our theatres and other public buildings, and with great show of contrivance, in the drawing; but they possess an equal or a greater number of errors of principle,—as we have once partly shown; and as we may perhaps at some convenient time, show more particularly. Still, as to the planning generally, however awkward it may be to find the way about a *suite* of rooms and passages which meet at all angles,—and though it be the fact that the original space of one room is being halved and quartered, as in the hotels for travellers, with slight regard for ventilation and health, the planning of the French architects is most skilful in its economising of space, and admirable in its conversion, without loss of space, of the effect which oblique lines of partitions would have, into the effect of art.

The numerous plans in Mons. Daly's book, clearly show the better results of the professional skill which we have adverted to. The great majority of the plans of the "*maisons à loyer*" arranged by him for comparison, as well as many of the plans of the fully-illustrated examples, are those of buildings abutting on circusses, and bounded on the two other sides by streets in the manner described. There are also in the work, plans of some of the buildings on triangular plots, or *islots*, of ground, which are very common. The late Professor Cockerell, in his earlier lectures, used to exhibit, as a specimen of clever arrangement, a plan of the triangular block of buildings, by Sir Robert Taylor, that formerly stood between the Bank and the Mansion House, where the Wellington Statue is now. The present professor in the Academy of course directs the attention of students to the study of planning; and, there is particular need of this, we apprehend; for, English architects do not show all the skill that is required. We would suggest to the professor, as subjects for illustration, these Parisian angle-blocks, and French plans generally. The French architect, indeed, would seem rather to delight in, and to court the difficulty of, a plot of ground not rectangular. For example, in one of the "*villas suburbaines*," a work by Mons. Hermant, in the Avenue de l'Impératrice, the house, triangular on plan, is placed in the angle of a large piece of ground which is also triangular, or trapezoidal,—the external walls, on two sides, exactly coinciding with the lines of the public footways, and the largest available space being obtained for the garden on the third side. An English architect would scarcely have prevailed upon himself to so completely eschew rectangularity. Ground, however, in a central quarter is too valuable for an inch of it to be spared, in the planning of the "*maisons à loyer*," which are the class of buildings chiefly to be found there.

The street-area to the cellars of London houses, and of the Pall Mall clubs, has no counterpart in Paris. This "ditch" (*fosse*), as they call it, immediately strikes the attention of French architects visiting our metropolis. A basement story is used for purposes of business in the case of the houses in the *boulevards*; but in that of buildings in the narrow streets, the French word *cave*, would convey to the English mind a tolerable idea of what the cellar is. Ample space is required in French establishments, for the stores of wood and wine. In the *caves* also are the "*fosses d'aisance*," receptacles now being connected with the sewers, but not intended to be wholly disused, at least until further progress in the principles of sewerage has been made. It must be recollected that the Seine at Asnières, where the outfall is for Paris, is a very different stream in width to the Thames at Barking; although, at the spot, it has the advantage of being above the tidal flow. Near the ground-line of the front of the buildings we have alluded to as in narrow streets, will often be seen a row of very small square apertures to light or ventilate the *caves*. The windows above, of the ground-floor, which may be appropriated to kitchens and to servants' rooms, are often themselves small, and fenced with iron railing. So that, altogether, there is frequently a character somewhat like that of the Florentine palaces, either arising from imitation, or from the traditional idea, or a supposition of necessity, of defence.

Of course on the *boulevard*, the giving up a large quantity of ground to the street having caused compression in planning the houses, much might be said on the question whether the effort for aëration externally, has or has not made the light and ventilation for rooms not looking to the street worse than it was. Our impression after much study of the question, is that it is chiefly where, in the central quarters, houses

* See p. 199, *ante*.

ave exceptionally not been rebuilt, and where ne subdivision of rooms has gone on, and in the otels for travellers, that rooms are worse than ney were before the alterations commenced. here are, however, *appartements* in many houses Paris, which have no *through*-current of air; nd this might seem to be the necessary result f the plan of buildings surrounding a court, at east as to the rooms running at right angles to ne street-front. The architect visiting Paris, nd looking at the structures in progress, how-ver, will not fail to observe, where a gap to be lled up, allows the party-wall of a completed uilding to be seen, a small recess breaking the ength of the wall, and running up the entire eight. Too often this recess is glazed over the top; but generally, it is to be con-dered as a ventilating shaft and additional rovision to that of the space of the court. uch a recess, moreover, will have opposite to it the next house, a similar recess. The large ourts of two adjoining houses in a similar man-er, may be each unenclosed on one of the sides, nd placed together.

The ground story of the "*maison à loyer*" is nually made up of two, four, or more, shops or ommercial establishments,—one of which is ery frequently a *café*,—and of a central door-ay. Where the building is of the first class, owever, there may be no shops; and a *porte-chère*, or carriage entrance, will then be sub-ituted for the smaller doorway. An *entresol* ay be said to be universal; and that window this story, which coincides with the entrance, almost always combined with the latter, either y the architrave of a square-headed door-case eing carried up and round, or by piers sup-orting a balcony over the entresol-window; or, here there is an arch, by forming a tympanum wood, decoratively treated as the doors, with small window in it. The window referred to, enerally is that of the bed-room of the *loge* of ne porter or *concierge*, whose quarters altogether re much too confined, as repeatedly observed of te by writers in the French journals. Of ourse, in the case of a narrow frontage, the ísection of the ground by the central position of ne *porte-cochère*, or doorway, would be incon-enient; the position however was persevered , till lately, in cases where the effect alluded , might have seemed inevitable. Some of the st examples of architecture now, are those of uses of narrow frontage, having the *porte-chère* at one side.

In the Boulevard de Sebastopol, the doorway sually, where there are shops, central, as we have id), is not generally an entrance for carriages; ough whether narrow, or wide and arched, it always itself effective, and most important in e whole composition of the front. The square-eaded doorways, in the *boulevard*, to Nos. 2 and by Mons. Davioud, with beautifully carved *illoche* in the architrave; tablet for the number, ith scroll-ornament, on the lower, and console the upper, lintel; the door-way, also enclosing entresol-widow, or fan-light, to No. 87, by essrs. Gault de St. Germain, and Letrosne,—ith segmental head, console and festoon, and cised ornament, and tablet again on the lower ntel, with simple, beautiful, and original wooden ors, and with an architrave formed by a chamfer ving an ornament of the "water-leaf" character erein; the arch-headed doorway to No. 11 (ive Gauche) with richly ornamented mould-gs on the splay, and foliage in the spandril aces; these may be mentioned as amongst e examples, all well illustrated by Mons. aly; but out of the boulevard, and also nstrated in the work, is the elegant door-ay of No. 39, Rue Neuve des Mathurins, by ons. Lesoufacher, a simple arch, with an archi-lt and architrave, and no imposts or console, d having pateras separated by panels. For ch compositions as the square-headed door-ays, no precedents have been *copied*; and it may questioned whether there were precedents cept of doorways much less in height to the rnice, in proportion to the width of opening. ven where the ground-story, with the excep-on of the central feature, is devoted to shops, the esence of the feature, whether square-headed oorway, or arch-headed *porte-cochère*, saves the ilding from much of that weakness of appear-ce which the front would otherwise present, d which is usually so fatal in London to any fect from architectural treatment of stories ove. In some of the "*maisons à loyer*" of e Champs Elysées, and in many other parts Paris, *porte-cochères*, or entrances wide enough r carriages, will be found square-headed. In ch of the cases, wherever they are, and whatever the form and proportion of the open-ing, the whole entrance is the most successful part, and often the making of the general design. The mouldings, the console, the wooden doors, the sides of the passage, or carriage-way, and the staircase; the *fontaine*, or the trellis-covered walling that terminates the vista,—and as already noticed, the very space for the enamelled tablet bearing the always conspicuous number of the house,—are all and each of them treated with originality, study, and beauty of result. Con-stantly is one tempted to enter the *porte-cochère*, and linger over the original details of its sides, and those of the doorways and staircases lead-ing from it, or to pass on to the court-yard, to find an elevation as carefully, and sometimes as richly, treated, as that of the principal front. No situation, or object, seems too mean for the display of taste; and the *fontaine* alone, itself, and by the choice of its position, has generally more beauty and art about it, than could be found during the longest search at the unsightly backs of our London houses. The grouping with foliage, or only with the trellis covering of walls, seen from the entrance, is, as we have said, charm-ing. Of the wooden doors, it may be affirmed that they display universally, result of an amount of design which is never given to such parts of a building with us. The joiner's work of English houses, may be as well framed and put together as supposed; though we have some doubts whether in this respect even, a superiority to French workmanship has not been too hastily assumed, and greatly over-stated. But not only our doors, but all our items of joiner's work, are just what can be described in a specification, and will not require the trouble of a single fresh drawing; the greatest flight of taste generally ends with "*bolection* mouldings," that is the requisite number of words about them. The mere panelling of French doors, and the casements of the windows, are matters of taste and design. Some of the external doors are marvellously rich in carving. Amongst the number may be named, the doors of the *hôtel* of Mons. E. Péreire in the Rue Faubourg St. Ho-noré. In many doors, iron-work is effectively introduced; and in many, there are panels of coloured marbles. One of the richest doors of the last-named class, that we have seen, is that of an ordinary house in the Rue de Rennes, the street that leads to the station of the Versailles railway on the Boulevart Mont Parnasse. The singularity of Paris to an Englishman, taking the trouble to visit the outskirts of the capital, would be the fact of the universal prevalence of decoration. How far it would be correct to assume, following a writer of one of the articles in the magazines of two or three years back, that Paris, the work of the period of the present reign, has "a show face" only, may be supposed from such facts as we have instanced. Some of the best architecture may be found in new streets running from the Rue de Rennes, and the Rue de Vaugirard. The limits of any pub-lication would not admit of representing a tithe of it.

It must however be admitted, that, throwing out the general evidence of *design*, the taste in ornament, the successful treatment of the *porte-cochère*, and some other attributes that we have spoken of, the French architecture is greatly at variance with our preconceived notions. We are reminded by the approaching opening of the Architectural Exhibition, that we have in nu-merous articles attempted to show the impor-tance of a certain grouping,—especially where the case was that of a many-storied building,—and of a division of the front by its decora-tive features into unequal divisions, as essential to the realization of proportion. We have also repeatedly spoken of an emphasized treatment of the basements of buildings. Much of our theory would have to be set aside, were we to assume the French system as correct. The ordinary street-architecture of Paris, above the *entresol*, is remarkable for the equality of its stories; and little attention is given to grouping stories to-gether. Of course, it may be said, the result is that the work appears what it is, a building of many stories; which last, moreover, in the build-ings of Paris, are more nearly equal to one another in importance, than the stories in the correspond-ing case of London houses. Still we do not see that the grouping of two stories of windows in some manner together, need at all contradict the ap-pearance which would have been given by the mere windows; the windows could hardly give anything else but the appearance of two stories.

In the basements there is not always soli-dity of effect. Where the ground-story is not devoted to purposes of trade, so much ground will have been given to make the ample width of a new street, or the street being an old one, will be so narrow, that there is hardly an inch of projection in lieu of base-moulding. Great cleverness, however, is sometimes shown in pro-jections, horizontal and vertical, which are not more than the quarter of an inch. In the Rue de l'Université, and the Rue de Belle Chasse, or about the Church of Ste. Clotilde, there are numerous excellent examples of architecture of the class which is different to that of the Boule-vard de Sebastopol. And the door-way or *porte-cochère*, is always most valuable as contributing to the solidity, and to the symmetry of the whole composition. The absence of much projection, or recession, in each front, except-ing that effect which is given by the *porte cochère*; universal balconies; terraces in front of the attic or mansard; constant iron rail-ings to balconies, and surmounting the cornice; and cantilevers and trusses which are inelegant in profile, are matters in which we certainly think our French brethren have something to learn, and something perhaps from us. On the other hand, it is so delightful to meet with evidence of an appreciation on the part of a whole people, of what is tasteful, as well as in the lower sense decorative and ornamental; to see that the archi-tect-artist has thought and worked, and the artisan has seconded him; and to have so much unquestionably that is good, that the architec-ture of Paris can never be wanting of charm in our eyes, without considering that it is seen in all the effect and beauty of architecture,—untar-nished, and with light, and a clear atmosphere; of which the want in London has been so often instanced as alone sufficient to account for de-ficiency of good architecture, and for lack of popular appreciation of the art.

THE BRADFIELD RESERVOIR FAILURE.

AT the conclusion of our last article we pro-mised our readers that we would return to the serious and lamentable accident to the Bradfield reservoir. We find that our remarks have re-ceived general approval, and been extensively circulated by the provincial and local press.

We remarked on the unsatisfactory appear-ance of the puddle, and this may be readily ac-counted for from the fact of there being no suitable clay for puddle in the neighbourhood, or, at least, in sufficient quantity, as appears by the observations of a local geologist (Mr. Sorby). "With reference to the nature of the material of which the embankment was constructed, I must say that, in my opinion, if it had been made of stiff clay, like that found in some parts of Eng-land, it would not have given way. So far as my knowledge of the neighbouring country en-ables me to determine, no such material could be procured there in any sufficient quantity." If such be the fact, and we have it here on the indis-putable testimony of a geological authority well acquainted with the district, we would ask, Why attempt to form an *earthen* embankment to sup-port such a large depth of water, when the principal material of which such embankments should be composed, the *sine qua non*, was not to be found in the district? Again, Mr. Sorby says, "The bursting of the reservoir was not occasioned by anything connected with the arrangement of the subjacent strata." On the other hand a *local* engineer, said to be an autho-rity, asserts,—

"In digging for the foundations of the puddle-banks, the contractor had to contend with great volumes of water issuing through the fissures of the watery strata underlying the lower part of the valley. Special engine-power had to be used to keep down the water, and a labour of somewhere like twelve months was required to cut off the streams and get a tolerably dry bed for the puddle-bank at the depth of 60 *feet*. Having made a good pud-dle wall, the company built their embankment with the *soil* from the sides and bottom of the valley above, thus *laying the strata of the open shelving rock*. The puddle wall appears to have been sufficiently thick and strong.

Possibly a somewhat broader foundation might have been better; but I do not in the least believe that the mere pressure on the embankment of any amount of water the dam would hold could have damaged it in the least. *The complaints made of the friable nature of the soil over, a the puddle bank, and forming the outer portion of the embankment, are childish.* The real cause of the bursting of the reservoir I take to be this. The rocky bottom and sides of the valley having been bared, the water, in pro-portion to its quantity and weight, found its way through the fissure of the rock into the courses of the springs, which proved such a serious obstacle to the laying the foundations of the puddle-bank. As the pressure became great, the water forced its way on and on, until it under-mined the foundations of the puddle bank, probably at last splitting it in two, and causing the crack at the top of the embankment. A remarkable circumstance to be taken into account in ascertaining the cause is, that about nine

o'clock in the evening, the water in the dam lowered 2 feet. This appears to be inexplicable, except on the supposition that the water found an inlet into the rocks. The rending away of the outer half of the puddle bank would naturally let down the top of the embankment *outwardly, as it was, in fact, let down*; and the water then rushing over the hollow thus made, would carry away the lower part."

So it appears this company were absolutely attempting to form a large reservoir to hold 114 millions of cubic feet of water, in a district where no water-retaining material could be found, and the substrata of the sides and bottom were rock, with, it is asserted, numerous open fissures and springs in it, which fissures would probably afford a passage for the water as fast almost as it would flow off the gathering ground. Is it not known, if not, it should be, that the proper site and substrata generally selected by our engineers for reservoirs, canals, &c., are compact, close, and impervious, such that will not permit water to percolate through or escape, even in infinitesimal quantities; and that if a spring is found within its area, it is generally carefully stopped or diverted (as was the case at Holmfirth, by Mr. Leather). Our canals are lined with puddle, &c., throughout, bottom and sides, in porous strata, so that they hold water like a dish; and why should not reservoirs be so also. We hear it also announced that the works of this reservoir had been examined and passed by a Government inspector, and that, as a consequence, it is stated the company are not liable for the damage occasioned by the failure. If such is the fact, that official and the Government have incurred a heavy amount of responsibility, one we are sure that will produce a very bad impression throughout the country, and shake public confidence in the professional judgment of the official, and the foresight and sagacity of the Government. In the support of our theory that the bank gave way from weakness, and the infiltration of water and consequent settlement, we may quote from a very sensible letter of Mr. J. Ibbotson, a corn-miller, and sufferer by the calamity. He says,—"The information was brought by S. Hammerton to G. Swinden, the company's foreman, about seven o'clock. We could trace with our light a crack running in a horizontal direction a distance of 40 or 50 yards along the embankment on the outer side, at a distance of 14 or 15 feet from the top. I said, What is the cause of this crack? G. Swinden and others were of opinion that 'it was caused *by the inner part of the embankment between the puddle-wall and the water subsiding a little owing to the water penetrating in,' and in consequence the top of the embankment inclined over towards the water.* At that time the opening would only allow of the fingers being inserted in the widest part. The double set of pipes which were in working order for drawing off the water were closed, and the water was a few inches below the level of the wash-weir. I said: Let us draw off the water as fast as the pipes will allow. It was a work of great labour for four or five men to raise the sluice by means of the screw, as well as some danger from the tremendous pressure of water, and the noise and tremour of the pipes when the sluice was being lifted were terrific. I went from the pipes to examine the crack, but perceived no change; and I observed that the level of the water was considerably lower on the inner side of the embankment than the crack on the outer side. I could not perceive any sign of leakage of water, but, owing to the darkness, we could form no idea as to whether the embankment was either sinking in any part or changing its contour." A few minutes before 12, they heard a shout and the roaring of the flood. It should be understood, that the reservoir was only filled on the 11th of March, and failed as described the same night. We think the evidence of this circumstantial observer and eye witness as to the early stages of the failure is conclusive against the theory of the leakage through the strata of the sides and bed of the reservoir, and the passage of the water under the puddle (60 feet deep) and seat of the embankment. It appears such leakage takes place at Rivington Reservoir, and passes under the embankments without doing any injury, or any attempt being made to stop it. But what would incline the top of the bank inwards, and necessarily open a crack on the outer side, but the pressure of the water inside the reservoir, filtering into and consolidating the inner part of the bank, carrying away the insufficient puddle (if that could be called puddle that existed) with it. We have also the evidence of another competent and practical person in support of our assertions, and line of reasoning, Mr. J. Drinkwater, a manager of water-works. He says,—"The sustaining bank of the dam, which is about 90 feet high, ought to have been 570 feet broad at its base, or in other words, have had an internal and external batter of 3 to 1 instead of 2 to 1 as at present, which would have left 30 feet for a footpath; also the waste weir should have been 180 feet long (120 feet longer than at present), besides increasing the diameter of the discharge pipes from 18 inches to 36 inches each. Instead of the earthwork being put together in consecutive layers of 3 feet at a time, and each layer being completed before another was laid on, it appears to have been rapidly executed, without the least attention to workmanship or consolidation. On examining the puddle wall in the centre of the bank, I found it both too slender in dimensions and too slight in workmanship. In order to resist the pressure resulting from such a depth of water, the puddle trench should have been 30 *feet* at bottom, and gradually diminishing to 15 *feet* at top, under the sod of the foot-path, being about 10 feet stronger than the present one at the surface. Instead of the puddle being joined to retentive earth at the foundation, and extremities of the bank, I found that an attempt had been made to attach the same to the soil, after the grass sod had been removed for about 3 inches in thickness. If this sample, which I observed near the waste weir, is a specimen of the whole, I am not surprised at Bradfield Reservoir, for unless the puddle which forms the water-tight part of the reservoir be united to good resisting earth, the water will undermine the foundations and ultimately cause the bank to give way. In addition to this, the clay appears to have been thrown into the trench regardless of any rule whatever, in lieu of being converted into puddle by being put together in 12-inch layers, and working each separate layer down to 9 inches, until it is finished. This plan was adopted in the foundation of Todd's Brook Reservoir, which I inspected in conjunction with the late Mr. Wood. This reservoir belongs to the Peak Forest Canal Company, and covers an area of 60 acres, with a cubical content of 47,412,270 feet. I adhered to this method when our two double three-banked reservoirs were made in 1839 and 1848." We quite agree with the principal part of these observations, and are glad to find that in the main they support what we have advanced, viz., that the bank was considerably too weak to support the hydrostatical pressure of the water, and composed of improper material; the puddle too weak, non-resistant, and badly made; and the provision for discharge of superfluous waters quite inadequate for the accumulations of so large a gathering ground after heavy rains and melting snows. If the theory suggested that the water of the reservoir escaped by fissures in the strata of rock at the bottom and sides be well founded, it does not set aside the ugly fact of the embankment being totally incompetent for the purpose for which it was intended; and arriving at this fact both by comparison, practical observation, and experience, and by the usual scientific formula adopted for ascertaining hydrostatical pressure, viz., by multiplying the area of the surface immersed in water in square feet by the depth in feet of its centre of pressure below the surface of the water, and by 62½ pounds, the weight of a cubic foot of water, and in comparison ascertaining the cubical contents and weight of the earth composing the embankment above that point, it would satisfy any unprejudiced person that the embankment was too weak to sustain the pressure, and as a necessary consequence failure was the result. This theory of the escape of the water by the crevices in the rocky strata is something like R. Stephenson & Co.'s theory of the "*side blow*." When the iron compound girder bridge, on the river Dee, Chester, failed under a passing train and many lives were lost, that theory was strenuously advocated and supported by many scientific men; but, nevertheless, it was miserably confuted and brought to grief by a few searchers after truth and subsequent experiments, published in our journal.

But the cream of the affair was, that although the principles contested were asserted to the last to be good, the remaining part of the Dee Bridge was propped up, and all other bridges of similar construction on other railways were also propped, showing that in that instance *theory* was lamentably at fault.

In our search for truth, in that case, we have reason to believe we "did the State some service;" and in the present case also we have endeavoured, by bringing judgment and experience to bear, to enlighten, to the best of our ability, the minds of the public, and to show the cause of this accident, so lamentable in its consequences.

We omitted to mention in our last, that the Bradfield Reservoir was commenced on the 1st of January, 1859, and that it was filled on the 11th of March, and failed about midnight of that day. In addition to the supply of the inhabitants of Sheffield, it had to allow the mill-owners on the Loxley 10 cubic feet per minute, as compensation for the loss of water.

We are collecting information on the subject of large reservoirs that have been constructed in various parts of the country, and may have something to say on it.*

FRENCH AND ENGLISH ENGINEERS.

A PAPER on the organization of the *Corps Impérial des Ponts et Chaussées* in France was read at the Society of Arts on the 16th. In the course of it the reader said, one great cause of the efficiency of the service of the engineers is, however, to be found in the body of conducteurs, or clerks of the works, whom they employ, and who are engaged upon the field operations, the superintendence of the workmen, the measurement of the works done, and the preparation of the drawings that are sent out from the engineer's office. The nomination of these men is rather singular, and takes place somewhat after this fashion:—The engineer receives a young man into his office, without salary at first, and he brings him up to the details of his business: at a certain time the men present themselves for examination as conducteurs, and they become embrigadés if they can pass that ordeal, which is made to embrace the whole range of sciences that are concerned with the practice of civil engineering, such as geometry, the theory of numbers, logarithms, the drawing of plans, levelling, taking out quantities, measuring work, the superintendence of it, and generally all that would be required for carrying works into effect. They become then conducteurs embrigadés de 4me classe, and they pass through the ranks of the third, second, and first classes, in the order of their seniority generally; but they may mount in grade more rapidly, in proportion to their merit or their patronage. By the law of the 30th October, 1850, it was provided that the sixth of the places of the engineers should be reserved to the conducteurs that had been in the service for the space of ten years, and who could then pass the examination that the engineers were subjected to; but this provision has hitherto been perfectly nugatory, for since its promulgation there has not been a single promotion from the body of conducteurs. The utmost they can aspire to is to be allowed to perform the functions of a civil engineer, whilst they retain their old rank. They would be regarded as intruders if they forced themselves into the society of engineers, as the equals of the latter, by taking advantage of the letter of the law. The consequence of this state of affairs is, that the pupils of the Ecole Polytechnique have practically the monopoly of the Government employment in the place of the Ponts-et-Chaussés, for the conducteurs do not aspire to that title, let them be ever so learned or ever so capable; and thus the French revolution has perpetuated the inequality of conditions, by giving the monopoly of the profession to those that can afford to pay for the education that is given in the schools—a strange commentary upon the doctrines of equality that the revolution was intended to inaugurate.

There is a very great inconvenience arising from the strictly theoretical style of education that the young engineers are called upon to go through, that consists in the desire the bulk of them possess to distinguish themselves by the construction of works of a monumental character, without any regard to the conditions of economy that would be applicable in the majority of cases. The principle of the French law is, that the architect is responsible for the solidity of the building that he may put up, against any defects of construction or erection, for the period of thirty years; and though the Ingénieurs des Ponts-et-Chaussées do not come under the strict application of the law, owing to their not working for a commission, yet the tendency of the law is to produce a great degree of strength, and a solidity of execution, that may be traced in all the works they execute. The administration

* Errata, in last, for "Ogden" Brook, read "Agden;" and for "coal" engineer, read "canal" engineer.

equires, in addition, that no work should fail: he engineer that risks much is looked upon as dangerous and troublesome man. There is very inducement, therefore, for the engineer to rect "monuments," and the character of the vorks of the Ponts-et-Chaussées is marked with he grandeur and the magnificence that was ormerly the distinguishing mark of the Roman ngineers; but the cheap and expeditious sys-ems that prevail in England and America are egarded with dislike and contempt. One other bjection may be made to the French system, in he total absence of original thought that it evelopes. The best subjects, as they call them, re obliged every year to travel in foreign ountries, and the works that are done in rance are generally the productions of civil ngineers and the somewhat despised race of rchitects. The Ingénieurs des Ponts-et-Chaus-ées do not attempt to produce any new style—ney only seek to construct "monuments" that hall last for ever, regardless of cost. The ten-ency of the body of the Ponts-et-Chaussées to his style of work is also, to a great extent, ssisted by the publication of a journal of the ody, that appears about six times a year, under e name of the *Annales des Ponts-et-Chaussées*, nd is characterised by the excessive love of eory, and the abuse (if I may say so much) of athematical and other scientific knowledge, at may be reproached to the whole of the esent school of French engineers. The mem-rs of that profession who communicate the formation that is inserted in this journal, are, fact, obliged to treat every subject which they ndertake in the most abstract manner, as ough they constructed or designed works for e sake of resolving problems of science, in-ead of endeavouring to answer the questions at might arise with the purpose of construct-g the works economically: they cultivate ence as the end of their labours: they do t look upon it as the means to the end. The me observation may be extended to the bulk French scientific works, whether they be ought out by the Ingénieurs des Pont-et-aussées or by the ingénieurs civils, for the ter are obliged to follow the example set by ir rivals, and to employ a great amount of ence on the simplest operations of their pur-t. Yet there is a great advantage in thus ostituting the indications of theory for the e-of-thumb processes that are still too preva-t here; and the contrast that is presented ween the French engineering journals and English productions of the same kind, is but le to the credit of our scientific and prac-al men.

The ultimate consequence of the strict system promotion that prevails in France is, that all t relates to the general direction of the public rks of that country is obliged to be transacted ough the body of the Ponts-et-Chaussées. . . . e distinction between the Ingénieurs des nts-et-Chaussées and the conducteurs is a manent and ineffaceable one, that will always a standing reproach to the system that would vent a man from rising by his own merits to foremost ranks of his profession.

Yet, although I am myself fully aware of the onveniences of the French system of orga-ing the public works of that country; though now the great expense that the nation is put on account of the want of practical knowledge, from the deficient technical education of the ineers that the Government is obliged to ploy, from the fact that no man can there rise n the ranks, let his merits be ever so great, from the mania that the system fosters for structing monuments that should last for ever; I have seen such confusion and such waste asioned by the system that prevails in England, ecially in the appointment of Government ials in similar matters, that I should be ost inclined to prefer the French system of Ponts-et-Chaussées to the ignorance and in-petence that prevail here in Government es. The engineers of the Ponts-et-Chaussées thoroughly acquainted with the subjects y have to pronounce upon, and they all feel though the reputation of their body were rusted to their safe keeping; whilst in England nomination of the engineers of the Govern-at is entirely regulated by favour and caprice.

n the discussion that followed, Mr. Haywood gineer of the City Sewer Commission) said he not gather from the paper that Mr. Burnell any conclusive opinion as to whether the em in France was better than that in land, or the reverse. With a great deal Mr. nell had said he fully concurred, but the root of the whole question of the organization in this country of a corps corresponding to that of the Ponts-et-Chaussées lay in the political condition and habits of the people. Whether it would be desirable or not, there was little probability of its being done in our time. He must confess that being tolerably well acquainted with France and her institutions, he never went there without regretting that some system could not be established in this country by which more unity of action in engineering matters could be obtained, especially with regard to the metropolis; but he could not see any intermediate condition between the present local-government system and the institution of a corps somewhat similar to that of the Ponts-et-Chaussées. If that corps was tested by the grandeur of its works, it was far in advance of the English: on the other hand, if the results were tested by the activity of commercial enterprise, then the French system was far behind ours. They had then to choose between the two. With regard to the works of the engineers in France, his conclusion was that their aqueducts, docks, high roads, and canals, were laid out better than our own, and also that the workmanship in them was superior to ours. With regard to the originality of their works he did not feel he could give an opinion. As to their scientific investigations he was inclined to place a higher value upon them than Mr. Burnell had done. Undoubtedly the first series of engineering publications he was acquainted with was the *Annales des Ponts-et-Chaussées*. He knew nothing in this country approaching them; and they formed a scientific literature of which any nation might be proud. There was one thing he could fully endorse,—that was the very high tone of honour amongst the engineers themselves. Their official pay was exceedingly small; but he believed a body of men with a higher professional tone did not exist. They did not aim at acquiring large fortunes, inasmuch as scientific men generally got in France that which they could only obtain here by becoming wealthy—they got high honour and social position. He happened to be at the New Year's levée of the Emperor, and he then inquired what was the precedence of the Corps des Ponts-et-Chaussées on such an occasion. He was told that the engineers took rank before colonels in the army, which was an evidence that their standing was fully acknowledged. But that was not the case in this country. There were brilliant exceptions, such as Faraday, and some others, who, although they never sought for wealth, were still so distinguished that they could not be overlooked; but the great mass of professional men in this country were generally measured by the depth of their pockets. That was why they struggled to make money as quickly as possible, because money was the passport into society. The engineers of the Ponts-et-Chaussées had an entirely different tone of feeling. He knew many of them personally, and could speak of them in the highest terms. There was one remark in the paper about the architects which struck him. He understood Mr. Burnell to state that they were responsible for what was called the well-designing of their work for a period of thirty years. The period was a long one, but he thought it would be a wholesome thing if some such rule were acknowledged in this country. It was true, a man was responsible for what he did, because, if he did not perform his duty, remedy might be had against him at law; but most persons would rather bear the loss than have recourse to the remedy. Then, again, the French system had its disadvantages. All those who practised as engineers in that country must have gone through the Ecole Polytechnique, and thus have been in some measure educated by the State, and so become naturally subject to State control. After all he felt that he could not say with certainty which system he preferred, there were so many elements involved in the question; but he would say he never went to France without coming back bitterly regretting that our present system did not, with our huge wealth and great commercial enterprise, produce results more worthy of the nation. If a few remarks on a subject, now becoming one of great interest in this country, were not out of place, he would say a few words as to the system of subways formed in Paris, which would serve as an illustration of the great care with which such works were carried out in France. His remarks would apply to Paris, Lyons, and other large towns. In the whole of the internal arrangements of those towns the French were beating us hollow: they were building better houses, forming better thoroughfares, putting up better lamp-posts, giving more light, and in all arrangements which affected the health of the community they were considerably in advance of this country. With regard to the main sewers of Paris, they were built in a style of magnificence which might be expected from a body who were not limited as to expense. He was one of those who thought the public works of large cities ought to be monumental, and not merely for the present generation. Surely it was an unworthy feeling that it was sufficient to carry out works which would last our own time, leaving posterity to take care of itself. That was part of the money-greed of the age; and in that respect our public works contrasted unfavourably with those of Paris. The large intercepting sewers of the French capital were made with footways on each side. Those along the Rue Rivoli and the Boulevart-Sebastopol were so large that a full-sized man could walk on the footway on either side with his hat on, so ample were the dimensions of these sewers. They were kept in a state of cleanliness that was surprising. The entrances were made highly ornamental, which he thought superfluous. The steps which led down to them were wide enough for two persons to descend side by side. A railway ran along the edge of each of the footways of the large sewers, and below that was the invert forming the sewer proper. An exceedingly well-devised apparatus travelled up and down this railway; and mechanical scrapers were used by which the bottom of the sewer was constantly cleansed. The whole of the gas and water pipes were covered with a black varnish or bituminous compound: it was true there were leakages, but very few. The smaller branch sewers were most of them 6 feet in height, and on each side of them might be seen porcelain figures marking the house-drains, with a small piece of white enamel about an inch square, which indicated that the proprietor of a particular house paid three francs annually for keeping his private drain clear. Everything was carried out on the same scale. When they contrasted this with the way things were done in London, without entering into the political question, with which he had nothing to do, but looking simply at the material results as they were presented in the capital and large towns of France, it made us ashamed on looking at our own metropolis; and when one knew as much about the expenditure in London as he did, as compared with the wealth, he must come to the conclusion that there was no town in France in which the inhabitants relatively to their means spent so little in keeping their city in decent and proper order as they did in London.

Mr. E. C. Tufnell remarked that the direction of the observations just made was altogether to depreciate English engineers below the French. He did not agree with that position, because there were many facts which went in contradiction of it. When the French desired to introduce any new engineering practice they almost invariably came to this country for the assistance of engineers. When railways were first commenced in France they sent for Locke and other English engineers to carry them out. We were the first country to introduce suspension-bridges. The French sent a deputation to this country from the Ecole Polytechnique to inspect what we had done. They returned to France, issued an elaborate report, stating that our suspension-bridges were erected upon wrong principles, and devising (as they thought) better ones. They erected a suspension-bridge in Paris, on their principles, but immediately upon its completion it tumbled down. Then, again, with regard to the Suez Canal, notwithstanding the predominance of French influence in Egypt, the Pacha sent to this country for engineering advice with regard to that project, and Mr. Hawkshaw went out to that country to make a professional report upon that great undertaking. Looking at these facts, he could not at all reconcile them with the views expressed by Mr. Haywood.

Mr. Frederic Lawrence said he did not feel the same difficulty that Mr. Haywood felt, as to which system he preferred. As an Englishman, he approved of a system which allowed talent to develop itself—by itself,—rather than a centralised system which tended to cramp the energies and fetter the originality of those employed; and he thought, if they compared the engineering works of this country with those of France, looking at the works themselves, they would see at once that our system was by far the best. Could the French engineers point to a Britannia Bridge? or, if they had anything resembling it, did they not copy it from us? Was not every

large engineering work in France a copy or modification of something previously done in England? He was surprised to hear Mr. Haywood speak so approvingly of the sewers of Paris. It might be that the sewer along the Rue Rivoli was better than anything we have in London; but why was it better? Because the French engineers came over here and saw what we had done: they adopted what we had done well, and improved where they felt they could improve. It was, however, only recently that sewers had been introduced into Paris; and, if that system were carried out all over the capital,—as was stated, regardless of expense—Paris might eventually be a better drained city than we could boast of. With regard to some of the details, he did not think Mr. Haywood, with whatever staff he could command, would care to have put upon him the task of fixing up the tablets he had spoken of, in the city sewers, indicating the numbers of the drains, and the sum paid by each private individual to have his drain kept clean. He had no hesitation in saying that, in his opinion, however admirable an institution the corps of Ponts-et-Chaussées of France was, it bore no comparison with the engineers of England; because, when he looked round, he saw the names of engineers who had carried out works which the corps of Ponts-et-Chaussées dared not have attempted. He, therefore, differed from Mr. Haywood; and had no hesitation in pronouncing the English engineers the first in the world; for, when any country was in difficulty, England was applied to for that valuable engineering counsel which could be obtained from no other country.

Mr. Haywood explained that his remarks had been misunderstood. He had dealt only with the broad features of the paper, and he had made no comparison between English and French engineers, as regarded their professional skill.

Mr. Lawrence understood Mr. Haywood to refer to the question of the two systems, and they must judge from the results whether one was better than the other.

Mr. Burnell said he had carefully guarded himself in what he had said against drawing comparisons between English and French engineers. Upon the question of the relative merits of the two classes, it was a singular fact that the French engineers had almost invariably consulted the English, and all the inventions that had altered the face of engineering science had arisen either in England or America. With regard to railways, it was well known they originated in England, and the same thing occurred with reference to suspension bridges. The merit of that form of bridge they knew belonged to Telford. Steamboats, the electric telegraph, and many other inventions, which had tended to advance civilization, were the results of the free-trade principles which prevailed in England, and of which he was a cordial supporter. The object of the paper was to call attention to the organisation of the corps of the Ponts-et-Chaussées, which he thought, for carrying out works necessarily in the hands of the Government, was superior to our system of appointing Government officers.

The Chairman (Mr. G. F. Wilson), in proposing a vote of thanks to Mr. Burnell, said he thought they must all, to a great extent, participate in the feeling expressed by Mr. Haywood, on comparing the style of the public works in Paris with those of London; and with regard to the sewers, if anything was calculated to mitigate that feeling, it was, as far as he was personally concerned, in the visit he paid to the great brick tank at Barking, covering an extent of eleven acres, which, for strength and excellence of execution, could hardly be surpassed, and which showed what could be done in England in the way of first-rate brickwork. He was afraid they could hardly expect to settle the question this evening as to the comparative merits of the two plans, and he thought they must be content with supposing that each nation had settled down instinctively into the particular system which best suited its own peculiar constitution.

PUBLIC WORKS AT HYDE AND DENTON.—The Local Board of Health at Hyde have made arrangements with the Public Works Loan Commissioners to borrow 14,000*l.*, which it is intended to lay out on an extensive system of sewerage. In Denton the authorities are expending 4,500*l.* in a similar manner, and are giving work to a large number of unemployed operatives.

THE LATE MR. RICHARD ROBERTS.

THE majority of those who are our readers, in or out of Lancashire, will at one time or another have taken some interest in the machinery of the cotton-manufacture. At the two International Exhibitions, there were few persons amongst the crowd, more interested in the working of the self-acting mule, than the members of our own profession. Mechanical engineering is separated by no defined line from civil engineering, more than the latter from what may have been considered the province of the architect. Naval architecture has usually been considered quite separate from what has been distinguished as civil architecture, which includes engineering; but civil engineers are now the naval architects.

The name of Mr. Richard Roberts, who was the author of that beautiful contrivance the self-acting mule, who touched and adorned each of the departments of modern engineering, and who invented machines that are of much importance in the construction of buildings in which iron is used, should not be left without a record in the pages of this journal. As the inventor of the Jacquard punching machine, for perforating rivet-holes, Mr. Roberts aided essentially the accomplishment of that great triumph of the combined efforts of many minds and hands, the Britannia Bridge; as he also aided it in other ways. The machine had its part in the realization of the more extended work, the Victoria Bridge, over the St. Lawrence, Montreal. This invention was followed by one of a duplex machine for punching holes for rivets, in angle-iron. The whole course of his life however was devoted to the invention of labour-saving tools and machinery, contrivances such as the authorship of them should procure the inventor similar credit for benefit conferred, to that which has been said to be due to him who causes two blades of corn to grow in the space where there had been but one. Mr. Roberts however only realized the return of too many inventors. Having made the fortune of some of his associates, and contributed,—if political-economists are to be respected, and facts taken,—to the welfare of a large increment of the population of England, he had gained at the time of his death, little but his reputation as an inventor, and a recognition of his merits in the shape of an all but realized provision for him by his friends. Before a sum that had been raised, could be applied to the object, and on the 11th inst., he died, being in his 75th year.

The biography of Mr. Roberts is full of interest, like the lives of most inventors with him, who have worked their way from humble origin. He was born in the parish of Llanymynech, near Oswestry, in Wales, on the 22nd of April, 1789. In this locality there are still mementoes of his inventive tendency and ability. He left his native place however, early, and in order to escape service in the militia. He got to London, where he worked in Maudslay's manufactory. He must have been young, perhaps not much more than twenty-one, when he was in Manchester, where, according to an account given to us by one who there assisted him afterwards in his avocations, he first procured employment in turning a wheel and thus furnishing what was the motive power of the machinery of a small engineering shop. The proprietor of this concern recognized Roberts's ability, but soon died. After that, it is said, Roberts married the widow, and became proprietor of the place. The Sharps, who were at the time dealers in iron, or in iron-manufactures, rather than machinists, appreciated Roberts's ability; and eventually, a partnership was formed, which became the firm of Sharp, Roberts, & Co., of the Atlas Works, celebrated throughout the world.

From about the year 1817, Roberts produced the planing-machine (now in the Museum of Patents, South Kensington), the slide-rest, slotting-machine, machine for cutting teeth of wheels, lathes, and self-acting tools of many kinds. These inventions and improvements, as it has been remarked, have contributed to the production since, of every species of mechanism, from the marine-engine to the railway-ticket press and the sewing-machine. The self-acting mule was an invention consequent upon an application to him, by master spinners, after the Staleybridge riots. On the introduction of railways, the firm became large makers of locomotive engines. Of these, 1,500 have been produced at the Atlas Works. Their manufacture was greatly aided by the use of standard templates and gauges, which had been applied by Roberts in 1825, in the manufacture of the mules. The system is the same as that now used for the Enfield rifle. A factory at Mulhouse, gas-meters, silk-looms, electro-magnetic apparatus, a balance (with moveable fulcrum) for weighing the proportions of metal to compound an alloy, and an improved form of windlass, were amongst his other works of various kinds. He also made turret-clocks. He gained a medal for one in 1851.

After some years' duration, the partnership of Sharp & Roberts was dissolved; and Mr. Roberts commenced a new concern in connexion with Mr. Fothergill and another person. This, however, does not seem to have answered; and Mr. Roberts, of recent years, was resident in London, where he practised as a consulting engineer. Here, he devoted much attention to the question of steam-navigation, and propulsion by the screw; and we believe it is recognized that independent credit is due to him for the suggestion, exhibited in model, of the two screws each worked by a separate engine, as well as of the two keels, the whole together being calculated to serve the efficient manœuvring of steam-vessels of war. In some of these and other inventions applied to ships, Mr. Roberts was concerned with Captain Symonds. The advantages of the twin-screw and double-keel system; and of the substitution, for outrigger < brackets of attachment of the screw, of screw-shafts led through trunks which are under the quarters and firmly secured to the bottom by vertical webs, were very clearly explained by Captain Symonds, at the session last year, of the Institution of Naval Architects.* As Mr. George Rennie has an independent claim to merit in connexion with the twin-screws, it may be well to quote from the Transactions of the Institution, what was said by Mr. Fairbairn at the last session. After alluding to defects of Captain Coles's system, from the liability of the cupolas to get jammed or crippled, he said:—

"These are considerations which appear to require careful attention on the part of Capt. Coles and the Government, before the plan is tried and confirmed, as the application of twin screw-propellers by Mr Richard Roberts and Capt. Symonds, appears to introduce an effective remedy for these evils. On this principle, the ship can manœuvre in any direction, and to any extent; by reversing the motion of one engine, the vessel can be turned round, with the whole of her broadside, in about the same time as the cupola with one or two guns. This power of motion in any required direction appears to me to be a desideratum in manœuvring ships of war, and is well entitled to the consideration of the Admiralty, at a time when science and its practical application may place the navy of England on a principle in advance of every other nation."

Mr. Roberts's name also, in connexion with a form of "non-fouling" screw, and an improved method of stepping and securing iron masts, was referred to by Captain Symonds at the same meeting.

Roberts's machinery was so remarkable for its perfect accuracy of fitting, that that which was really a merit, has been often spoken of in Lancashire, as though a fault. Proper attention being given in oiling and cleaning, such machinery would last all the longer; but then it was said, if machinery lasted eight or ten years, that was enough, since improvements were made in such periods, and it would be better to have new machinery with the improvements, than retain the old. It was thought therefore that more margin might have been left; and that, so, any carelessness, or dirt, would not have frequently entailed stoppage of the machinery. Mr. Roberts is mentioned in Smiles's "Lives of the Engineers," but with some errors as to facts,—those who knew him, tell us. We have therefore trusted to recollection, and to the information of friends, for such particulars as we have given.

THE BASILICA OF ST. CLEMENT, ROME.

THE researches in the ancient church, now subterranean to the more modern one of *San Clemente*, still continue, and supply proof that the whole interior, walls and pilasters, must have been originally covered with polychrome decoration. Among the many paintings of Scriptural and legendary subjects hitherto brought to light, the last-discovered are about the most interesting,—indeed, beyond comparison, the most valuable records of the school that flourished in Rome between the period of the Church's perilous retreat in catacombs, and that of the revival of art and intellect in the fourteenth

* "Transactions of the Institution of Naval Architects. Vol. IV. 1863. Office, 7, Adelphi-terrace, London." 4to. Pp. xxii, & 302, and table. Ten plates, & cuts.

century;—in painting, at least, almost the only important relics from the art of that interval, though in the department of Christian mosaics the treasures left by Mediæval schools are numerous in this city.

It is to be remembered, that the present conditions to which has been reduced the primitive church of St. Clement are ascribable to that fatal conflagration caused by the Normans, under Guiscard, in 1084, which swept over and totally devastated the entire region between the Capitol and the Lateran, where the antique basilica, with its convent (now of Irish Dominicans) is situate; and the more modern church is supposed to have been built very soon after that catastrophe, over the ruins which were thus concealed,—left buried, in fact, and forgotten for ages, under its structure. The last-discovered series of paintings are on a wall-surface above the actual façade, and seem to have belonged to the decoration of the narthex; these being indeed the most valuable, and of such merit in style and composition, that it may be inferred their discovery will be remembered as an event to lead to some modification of theories respecting the conditions of art before the Renaissance, or the precise period of its last and deepest decline in the so-called "dark ages." We here see illustrated the poetic legend of the martyrdom of Pope St. Clement, on the coast of Cherson, or the Crimea. After working as a slave with other Christian victims, in the stone-quarries, he was drowned in the Euxine Sea; but his body was miraculously preserved in a splendid temple built under the waters by angelic hands! And every year, on the anniversary of his death, the waves retreated, leaving a passage along dry ground for the faithful to visit and worship at that mysterious shrine! Once (according to the fable) it happened that a mother brought her young child with her on this solemn occasion; and, returning, left the boy in the temple, imagining he had followed with other children brought by parents to join in the same devotion. To her agony she found that the sea had flowed back, submerging, before she could retrace her steps to, that martyr's shrine. On the next anniversary, she returned, entered with other worshippers, and there, to her unspeakable joy and astonishment, lay her lost son asleep before the tomb, unscathed, and unconscious, till he awoke in her arms! This story is represented in three distinct scenes. On one side is an external view of the city, with the name *Cersona* over a gateway. From it is emerging a procession of worshippers, headed by the bishop, in sacred vestments, with the crozier, but no mitre on his head. In the central compartment is the temple, like a fantastic pavilion, supported by slender pillars in the midst of the sea, here indicated by an ample wavey surface bestrewn with large fishes. Within appears an altar, having two lighted tapers on its *mensa*, and three lamps suspended above. Here we see the figure of the mother twice, in different actions, first bringing in her child, and again discovering him asleep before the altar, where she kneels, as the boy awakens, to leap into her arms,—an affecting scene expressively rendered. Above the mother's figure are the words written in form of a cross, *mulier videca*. Below this picture is the inscription explaining its subject: "*Integer ecce iacet repetit qve previa mater*," —wanting only the first four letters here supplied; and, in a lower compartment, another group evidently intended for the family who ordered this picture as a pious offering—a father and mother, a little boy and a girl, led by another female, each carrying a peculiarly-formed taper, no doubt to offer at the altar,—the names of all being written beside the several figures:—*Beno, Domna Maria, Puerulus Clemens, Attilia, Ge*, the last incomplete. In the midst of this group, within a circlet, is the half-length figure of St. Clement, holding the sacred volume, and raising one hand to bless; a large nimbus round his head, his countenance remarkably noble, and full of apostolic benignity,—the features finely regular. Below, the epigraph, in Leonine verse, "ME PRECE QVERENTES ESTOTE NOCIVA CAVENTES;" and laterally to the group, another inscription, which may be read (filled up in its sundry abbreviations) as follows: "*In nomine Domini ego Beno de Rupiza pro amore beati Clementis et redemptione animæ meæ pingere fecit*" (*sic*). That this family, here represented by Beno de Rupiza, its head, was noble and belonged to a period in the eleventh century, and that the pictures executed by their order in this church may be referred to the latter years of the same century, is the conclusion to which Signor De Rossi arrives in his interesting report on the last discoveries at S. Clemente (*vide* the "Bulletin of Christian Archæology" for January). Higher on the same wall surface must have been painted another composition belonging to the series, lost by the demolition of this part to give place to the modern building above; and that its subject was the miraculous preservation of St. Clement's body in the temple, is evident from the extant inscription, much injured, but easily restored as follows:—"*In mare submersum tumulum parat Angelus istum.*"

In another part of the same subterranean church has been recently found the hitherto-covered half of a picture whose other moiety had been brought to light some time previously, and whose subject is clearly explained by the words legible below, as the transfer of the body of St. Cyril from St. Peter's to this church, where his tomb has been reached in the course of the works now progressing. This saint was a celebrated Greek missionary of the ninth century, who was sent from Constantinople to preach the Gospel to the Slavonians, ultimately settled at Rome, where he died, and was interred with great honours. In the funeral procession here represented, his body is carried on a bier, in pontifical vestments, the head still crowned by the nimbus: a pope, walking between two bishops, and several other ecclesiastics follow, one of the prelates, as well as the pope beside him, also distinguished by the nimbus; and among sacred symbols appear two croziers, a large jewelled cross, and three standards, consisting of banners pendant from small crosses, in form like the *labarum* (the only instance of the introduction of this last in any known paintings of very early date): beside the bier, are two thurifers swinging large censers of globular form; and, near its head, walks a female, whose dishevelled hair and vehement action seem to express the most passionate grief. At the picture's right side, appears another subject, distinct in itself, though not divided from the former,—the celebration of Mass by the same pope at a low altar, on which lies an open book with certain words from the Roman liturgy still in use; but no ornament or symbol, neither cross nor tapers are seen. Pendant lamps alone illuminate the rite, hanging from a species of ædicula, perhaps meant for a perspective view of this church's interior, the three narrow arches here introduced to represent its division into nave and aisles. The inscription below may be read (with some restoration).

The figure distinguished by the nimbus, walking beside the pope, may be the brother of St. Cyril, Methodius, also revered as a saint; and the pontiff himself, Nicholas I., elected 858, and canonized, who was the first to encircle the papal mitre with a regal diadem, as in fact here represented, wearing a tiara of a *single* crown, which he is said to have assumed in sign of *temporal* sovereignty. In this picture, therefore, we have the earliest extant representation (as De Rossi has shown on sufficient grounds) of the original pontific tiara, long before that prouder symbol, the *triregno* (or triple crown) had been invented. As to costumes, we are reminded by these groups generally of the Classic, rather than the Mediæval, excepting, indeed, the ecclesiastical personages, whose vestments are almost identical with those worn at the altar still. The rest are clad according to fashions that may be considered early modifications of those proper to Classic antiquity. The *paterfamilias*, named Beno, wears a tunic reaching to the knees, a mantle clasped over the right shoulder, like the antique lacœna, and short beard with moustachios: the females are in vestments of ample folds, flowing down to the feet, with hair low on the head, parted over the brows, and in some instances (as the Maria, Beno's wife), a short veil added to the other details of a dress remarkable for graceful simplicity. The modest style of sacred ornaments, where any sanctuary is represented, and the absence of images, even of the crucifix, convey tacit reproach against the tawdry and theatrical decorations now fashionable in the Italian church. Copies of all the more noticeable paintings among this series have been taken by order of the worthy prior of the Irish Dominicans, Father Mullooly, who has sustained the costs and risks of the excavations here in a manner entitling him to general gratitude; these copies, to be presented to the Pope, executed by an artist named Ewing, of English descent, though Roman by birth, with skill and fidelity are deserving of praise. As to the colouring of the originals, one is struck by its surprising freshness, and by a certain degree of harmony. The drawing does not, indeed, indicate much knowledge of anatomy; but the draperies are, for the most part, well designed, many of the countenances full of earnest character, some beautiful; perspective, in the architectural details, about as defective as is generally the case in the art of the fourteenth century. The above-mentioned, and most of the other compositions, those more complicated at least, hitherto uncovered in the researches on the spot,—as the mass of St. Clement, the story of St. Alexius, the group of the first successors of St. Peter,—are obviously of the same period, and may be inferred to be by the same hand.

Rome.

THE MOSAIC WORK IN WOLSEY'S TOMB HOUSE, WINDSOR CASTLE.

SIGNOR SALVIATI is proceeding rapidly with the enamel mosaic work in the vaulted roof of Cardinal Wolsey's tomb-house, Windsor Castle, under the directions of Mr. Gilbert Scott, R. A., for Her Majesty the Queen. The surface of the panels to be covered by the mosaic work is upwards of 2,000 square feet, and more than a half of the whole is already fixed.

The cartoons have been designed and drawn by Messrs. Clayton & Bell. All the mosaic work was executed in Venice, and is fixed by Venetian artists, who came hither for the purpose. The roof, as most of our readers know, is groined, and the spaces between the groins are filled with enamel-mosaic pictures, on gold-enamel ground. Each long panel has a half-length figure of an angel whose head is surrounded by a gold nimbus, and, as well beneath as above every figure, there are ornaments representing foliage, clouds, &c.: the other panels along the centre of the ceiling contain the Prince Consort's crests, with the motto *Treu und fest*, his initial, medallions, devices, and other ornaments.

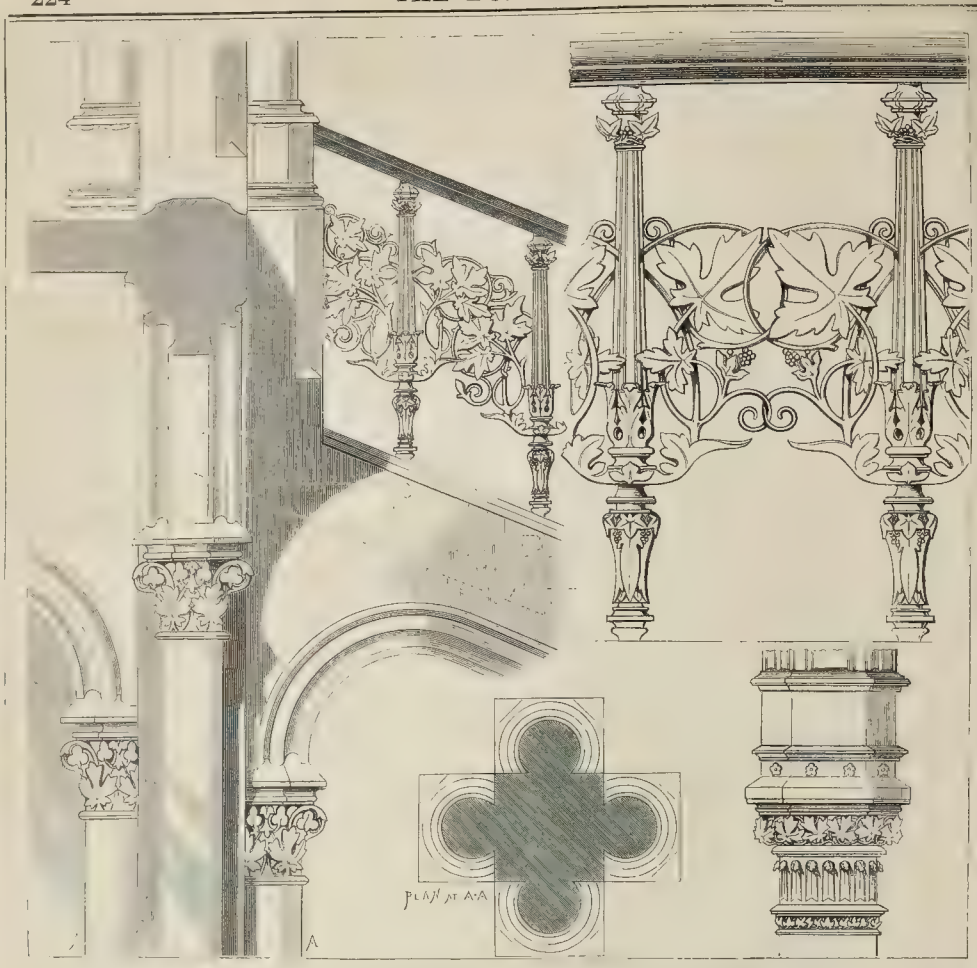
The roof is divided into two parts: the first we may call the *secular* or *heraldic* part, and the second (east end of the chapel) the *sacred*. In the whole there are 92 angels, each holding a shield. The 64 angels of the first portion are holding shields bearing the arms of the Prince Consort and his family, and the other 28 angels of the second part hold shields with the various emblems of Our Lord's Passion.

The large number of tints, and the improved quality as well of the coloured as of the gold enamels, are very noticeable, particularly the different tints which the gold enamel is capable of receiving, and the successful use of it (ruby-orange and variously-shaded colours) in the wings of the angels, in the *gloria* round the heads, in the shields, crests, and many other important places. The execution of the whole work will occupy, it is stated, no more than *ten* months, dating from the date of receiving the first part of the cartoons (July 1863), till the complete fixing on the roof.

Considering the extent of the work, upwards of 2,000 square feet, as we have already said, this speed is very remarkable, and speaks strongly for the organisation of Signor Salviati's establishment. We shall make a personal inspection before long, and speak more decisively as to the effect of the work.

THE DUCHESS OF KENT'S MAUSOLEUM.

ON the 16th, being the anniversary of the death of the Duchess of Kent, the Queen and Royal family repaired to the mausoleum of the Duchess at Frogmore, where the statue of her Royal Highness (a cast, shortly to be replaced in marble) was uncovered. The statue, which is by Mr. Theed, and was modelled under the superintendence of the Prince Consort, represents the Duchess standing. It is on a pedestal of imperial red Portuguese marble, and is placed in a temple over the chamber containing the sarcophagus.



Over the statue is the following inscription:—

"Her children arise up and call her blessed."

The following lines, by Mr. Tennyson, are also inscribed:—

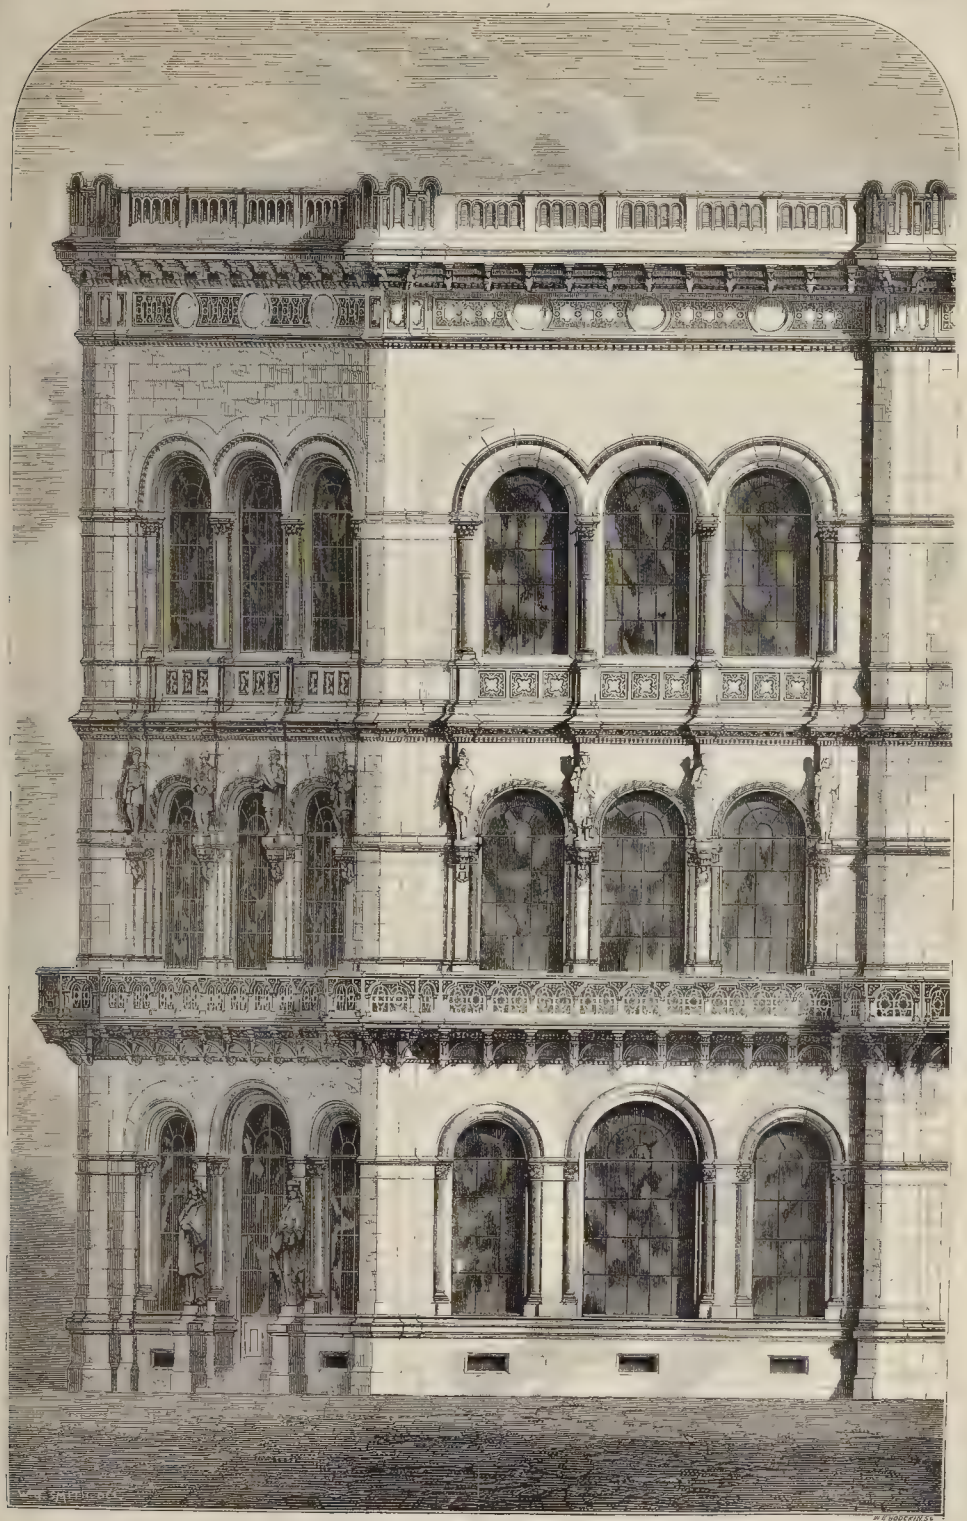
"Long as the heart beats life within her breast,
Thy child will bless thee, guardian, mother mild;
And far away thy memory will be blest
By children of the children of thy child."

A view and descriptive particulars of the mausoleum will be found in our nineteenth volume (1861), p. 531.

THE BANK AND EXCHANGE, VIENNA.—*Details of Staircase.*

SHAKSPEARE MEMORIALS.

THE London Committee have at length advertised their first list of subscriptions (about 1,700*l.*), with intimation where donations may be paid. They have lost five good weeks, as it seems to us. Let us hope, however, that all interested in the movement or for the adornment of the metropolis will at once send their names,—those who are willing only to give shillings as well as those who will give pounds. ——A meeting has been held in Holborn to receive a deputation from the London Committee and appoint a local committee in the joint parishes of St. Andrew and St. George the Martyr. The deputation consisted of the following gentlemen: Messrs. W. K. Sawyer, G. Linnæus Banks, C. H. Elt, and J. C. Jeafferson. Appropriate addresses were delivered by the chairman and the members of the deputation, after which a number of names were read as forming the nucleus of a local committee. —— At Stratford, the site of the present market house has been determined on as the best for the statue.——The Manchester subscription now amounts to 1,600*l.*——Extensive preparations are being made at Bury, in Lancashire, by amateur dramatic performances in the Athenæum, on the 22nd and 23rd April, under the patronage of Lord Stanley and the local gentry. The pieces to be performed on both evenings are "As you like it," and "Taming the Shrew." The whole of the scenery has been painted by local artists, and the costumes are to be supplied by a London costumier. The proceeds are intended to be devoted to the erection of some simple memorial of the event. Several architects are actively engaged in forwarding the necessary arrangements; one of whom, Mr. Lawrence Booth, is the honorary secretary.——At Frankfort-on-the-Maine considerable interest is being manifested. It is understood there are to be a banquet, some orations in English and German, and a play in the evening at the theatre—Shakspeare's "Winter's Tale"—which will probably be in English.



THE BANK AND EXCHANGE, VIENNA.

PROMINENT amongst the modern buildings of Vienna, some of which were described in our recent series of papers titled "Going Along," is the large building erected for the purposes of the Bank and the Exchange. In a former volume will be found a view of one frontage of the building, with descriptive particulars.* We now add a view of part of the flank, and some details of the staircase, stone and metal. The building was commenced in 1856, from the designs of Herr Ferstel (also the architect, it will be remembered, of the Votive Church in the same city), and was finished, with the exception of the interior coloured decorations, in 1859. The fronts are wholly of stone. With a general agreement between the two fronts, considerable variety will be found on comparison in the details.

* Vol. xviii. p. 464.

THE RAG COLLECTING BRIGADE.

THE waste which is made in a population of nearly three millions of people would, if properly attended to, prove an enormous source of profit. Look, for one instance, to the great loss which at the present time results from the waste of materials used for making paper, a matter of much consequence, for we are now obliged to buy enormous quantities of rags for paper making from abroad. For the purpose of preventing this, the Rag-collecting Brigade, in connexion with the London Ragged Schools, has been formed at Albion-place, London-wall, where at the present time there are more than thirty boys and youths, who, with the trucks to which we have before referred, collect a considerable quantity of rags. The advantage is great to poor boys, and produces also a national saving. For instance, although this Rag-collecting Brigade has been established but a very short time, there have been paid up to last Christmas 12*l.* in wages to boys who, but for this institution, would have been dangerous vagabonds upon the London streets. Besides, they have collected, by four trucks only, in nine months, 49,818 bottles; of paper, 38 tons 19 cwt. 1 qr. 15 lb.; rags, mixed, 9 tons 18 cwt. 2 qr. 22 lb. There are also various rags and bones, carpet, cloth, fat, &c., metals, and rope, altogether making a weight of goods collected by these lads of 82 tons 3 qrs. 27 lb. Besides this, there have been about 70*l.* worth of stuff purchased which was not bought by weight; and the committee have good reason for believing that more than one-half of

THE VIENNA BANK AND EXCHANGE.—Herr Heinrich Ferstel, Architect.

this material would never have found its way into the market but for the facilities which the brigade affords. The materials collected are of the most varied description; — cocked hats, hearse-trappings, old aquariums; in one bag a million of postage-stamps; and in a lot of rubbish was found a Bank of England cheque-book, which was at once forwarded to the Bank: in another were found half-a-dozen pairs of new stockings, which were duly returned to the owner.

The committee express a belief that much of the present waste is caused by the objection which many persons have to deal with the marine-store keepers. Even some servants do not like to go into these persons' shops, which, for the chief part, are places for the encouragement of dishonesty; but in connexion with this brigade there can be no objection. A fair tariff is made, and the collection of waste paper, grease, bones, broken glass, rope, carpets, &c., is, besides the money value, the means of saving lads from destitution, and putting them in the way of earning a proper livelihood.

The boys who form the brigade have been selected from the Shoeblack Brigades and Ragged Schools. At first, a great difficulty was felt in finding a suitable and central depôt; but this was at length obtained in Albion-place, London-wall, at a rent of 77*l.* per annum. It has been fitted up at considerable cost, and an excellent manager has been appointed, who well understands the business, and was himself reared in a ragged school. There are other expenses which now press; but such is the promise, that before long it is believed this institution will be carried on at a considerable profit.

The plan of operation is, that to each truck is assigned a district, the bounds of which are not to be passed except in especial cases. Before commencing perambulation, bills announcing the aims and objects of the brigade are distributed from house to house. The boys assemble at seven in the morning, family prayers are conducted by the superintendent, and breakfast is provided. Then the trucks, each attended by a collector and two assistants, start on their rounds. To be a collector, a boy must be a fair reader and writer, his wages varying from 7*s.* 6*d.* to 10*s.* 6*d.* a week; but he cannot be appointed to this post till he has 20*s.* in the Shoe Brigade Bank, as a guarantee for his honesty. The assistants who act under his control get from 6*s.* to 7*s.* a week. If the rounds lie near the depôt, they make two or even three loads in the day; but in some instances it is four or five o'clock before they reach home with the first load. The collector is furnished with a tariff of prices: he leaves a receipt for all goods purchased, and obtains a signature on the counterpart for cash paid to the vendor, so that nothing may be surreptitiously bought or sold. At first the boys met with many repulses; but as the system becomes better known the difficulty decreases. The districts most worked have been Islington, Barnsbury, Canonbury, Highbury, Kingsland, Brompton, Camberwell, and Walworth.

The great majority of the boys employed are of a class who would find much difficulty in obtaining employment elsewhere. The first boy engaged was the youngest of three brothers, two of whom had been transported, and he seemed in a fair way of following in their footsteps; but here he was received when every other kind of employment seemed closed to him, and he conducted himself so well, that he attracted the notice of a gentleman, who took him into his warehouse, where he bids fair to do well.

The number of boys employed up to last Christmas was twenty-two; but there can be no doubt that more than ten times this number might be usefully engaged. The wages paid during nine months were 424*l.* The average expended daily by each truck was 13*s.* 9*d.*, and the number of separate transactions was 9,000.

At the present time there are seven trucks and thirty-four boys at work; and experience shows that each truck requires a floating capital of 50*l.* The weekly purchases per truck now average 5*l.*; and it is some eight or ten weeks before the stuff is sorted, sold, and paid for. Notwithstanding, the trade balance-sheet shows a profit of 240*l.*, which is more than swallowed up in the sums paid in rent, manager's salary, and wages of experienced sorters to instruct the boys, &c., none of which would have to be increased if there were ten or fifteen trucks instead of the present number; and between 200*l.* and 300*l.* are required to place this depôt on a permanent and self-sustaining footing. We trust that this aid will be forthcoming, and that thrifty housewives will keep their rags for the brigade.

ARCHITECTS' BENEVOLENT SOCIETY.

THIS society is quietly doing good work so far as its means permit. We would advocate its claims on the profession, and we cannot do this better than by printing, *in extenso*, the report, the adoption of which at the general meeting on the 9th inst. was moved by the president, Professor Smirke, R.A., and seconded by Mr. Chas. Fowler:—

"The period has again arrived when it becomes the duty of the council to report progress to the general body of members, and to submit a statement of the financial condition of the society.

The council apply themselves to the annual task with mingled feelings of pleasure and pain.

It will be seen by the statement about to be laid before the meeting, that the amount of subscriptions received during the past year exceeds that of the preceding year, and the arrears due are very considerably less. The demands, however, on the charity, have been heavy. Fourteen cases have been relieved, and the sum of 358*l.* has been distributed;—a much larger sum than the council has ever yet found it necessary to so appropriate during any one year.

On the other hand, it must be stated that the number of members has diminished by four. Considering the rapid increase in the number of those who pursue our profession, it seems a sad reproach that such should be the case, and that this society, founded on the purest motives, and whose funds are administered with the most scrupulous and unremitting care, should be left with such restricted means. During the past year we have sustained the loss of three distinguished members.

It is with deepest regret that we have to record the death of one of our earliest, warmest, and most liberal supporters, Mr. Cockerell. In his death the profession has lost one of its greatest ornaments, and this society one of its most valued friends.

It is with grateful feelings that the early members recal to mind the earnest and hearty personal interest he took in the foundation and establishment of the society, and the constant friendliness that he felt and repeatedly expressed towards it during its whole course.

In the deaths of Mr. Bunning and of Mr. Scoles, the society has also lost two among its much-honoured members.

It is with societies as with individuals: we can feel the loss of our earliest friends with the keenest regrets, for they leave a void behind them which cannot be fully replaced.

Among the cases relieved during the past year, several have occurred of great interest. One who was a Gold Medal student of the Royal Academy, and has since lived an active life under favourable auspices, yet now, when upwards of eighty years of age, is wholly without means of subsistence. Another most deserving case is that of a gentleman more than seventy years old, who, without stain on his character, is penniless. Widows equally destitute, yet with large families, are also on our list of recipients.

The perpetual recurrence of new cases such as these, and, indeed, their apparent increase in number, invite our most serious consideration.

It may be assumed, probably, that the profession never held so important a position in the country as it holds at the present time. Owing to the general prosperity of the people, new buildings are rising in every corner of the kingdom, and few are now erected without the aid of the architect. This was not formerly the case. Æsthetic considerations used rarely to enter into men's minds, unless when some great public work was about to be undertaken; and the result of this general consideration for art is very apparent in the poor and insipid character of architecture at the close of the last century in this country.

Those times are passed away. The general public have learnt what sort of a client the man usually has who is his own architect, and hence the horizon of our art brightens.

But let us not be too jubilant. Let us not, in the midst of comparative prosperity, forget the duties prosperity brings with it, nor shut our eyes to the sad sights of distress that lie ill-concealed beneath the surface of professional life. How many of our brethren are pining in want and sickness whilst we are in ease and comfort!

We should, indeed, regard it not as a mere duty, but as a privilege, to help to soothe the sorrows of these unfortunate persons.

Remember that we have it from the most unerring source that, 'without charity we are nothing worth.' Were this truth more practically felt by our profession, especially by those who are practising in the great provincial centres of the country, we should no longer have, from year to year, to urge on them so earnestly as we do the claims of this most excellent institution."

We cordially endorse this appeal, and hope to hear soon of a large influx of new subscribers.

FEMALE ART STUDENTS AND THE ROYAL ACADEMY.

TWENTY-THREE female students at the South Kensington and other art schools, all proposing to become professional artists, have addressed a memorial to the Royal Academy, complaining of the Resolution that was come to last year, that no more female students should be admitted into the schools of the Academy, and praying that liberty may be restored to female students to compete for admission into the schools of the Royal Academy, upon the same terms and conditions, in all respects, as are granted to, or imposed upon, male students.

The memorialists urge, —

"That the limited accommodation need not be made a ground for adhering to the excluding resolution (if it be otherwise an undesirable one). First, because the number of female students likely to become competitors will (at least for many years to come) be very small indeed in comparison with the number of male students, while the proportion of successful female competitors is, your memorialists fear, likely to be still smaller.

And secondly, because that inasmuch as your memorialists neither ask nor desire that any preference or favour be extended towards the female competitors at the entrance examination, the result will be that the entire number of students will not be increased."

They appeal to the fact that in many exceptional instances female sculptors and painters have attained to a high degree of excellence; and submit that it is sufficient for the present application to show that such success is possible, however rare; because by how much it is unusual, by so much greater need is there that female students should be deprived of none of the advantages which the more favoured sex possesses.

HOW BENEVOLENCE OPERATES AT MELBOURNE.

THE way in which charitable persons are sought out, and give aid to worthy objects, in Australia, is peculiarly characteristic. "The funds of the Albury Hospital being almost expended," says an advertisement in the *Border Post*, "and the closing of the hospital being imminent, it has been decided to hold a sale by auction, in aid of the funds; and it is earnestly requested that the burden of supporting this valuable institution may be shared by the residents in the district, as well as by the townspeople, on whom hitherto the hospital has mainly depended. Contributions of horses, horned cattle, sheep, pigs, poultry, or any live stock, furniture, ornaments, plants, books, farming or gardening implements,—in short, of everything new or old, are earnestly requested, and will be thankfully received:" Mrs. Walker Jones and other earnest workers, undertaking that task.

Then follows a "fifth list of contributions," among which are —Mr. Metcalfe, an opera-glass; Mrs. Richardson, two pairs of gold ear-rings and pincushion, pleasant sacrifice on the altar of charity; Mrs. Peard, gold ring and fancy work; Mr. Peard, brace of silver-mounted pistols; Mr. S. A. Meyer, a bench-screw; Mrs. Kelly, three pairs of fowls; Mrs. Burleton, 1*l.* 5*s.*; Mr. T. Keighran, a fat bullock; a Friend (by Mr. Day), a foot-bath, child's frock, three books, and 5*s.*; Mrs. J. Darby, eight geese, two turkeys, and a magic-lantern; Mr. J. Darby, 1*l.*; a Friend (by Mrs. Blackmore), a pillow, paper-knife, and Moore's Poetical Works; Mr. Bligh, a bag of oats; Mrs. Ogle, children's frocks, plants, and fowls; Mr. J. Nichols, handsome meerschaum pipe; Mrs. French, a fancy mat (2nd con.); Sebastian Schuback, a bag of wheat; a Friend, two pairs of satin boots, three pairs of coloured mittens, twelve yards of lace, knitting cotton, embroidery, cotton, and two pieces of stamped muslin (2nd con.); Mrs. Morgan, a spirit lamp and bread-plate; and so the list goes on. The contributions are, of course, afterwards sold.

THE HOTEL MOVEMENT.

A "LIVERPOOL Adelphi Hotel Company (Limited)" is being formed, with a capital of 100,000*l.*, in 10,000 shares of 10*l.* each. The object of this company is to purchase the Adelphi Hotel, at Liverpool, which is offered for sale in consequence of the death of Mr. Radley, the late proprietor. Its size, however, says the prospectus, is quite inadequate to the constantly increasing requirements of the public resorting to Liverpool, and it is an object of the present company to make such alterations and additions as will supply what is thus needed.——Another Liverpool hotel company is projected, under the title of "The London and Liverpool Hotel Company (Limited)." 120,000*l.* is the amount of its capital, in 6,000 shares of 20*l.* each. The company are said to have arranged to purchase the lease of the Washington Hotel, but they do not propose to enter into any building operations.—As we have before said, it is (or rather was) to be hoped that new and more reasonable charges were contemplated by these new companies than the rapacious tariffs already in force; but now we have ceased to hope for anything of the kind, as not even promises of any such reform are held out in course of this movement. We regret to find that it has assumed so unhealthy a shape; and it requires little foresight to perceive that the only pockets which are likely to be filled by it are those of the old hotel-keepers, who are getting rid of their exhibitant and hence poorly-paying concerns to new companies, in getting up which they are themselves probably chief hands.

MODES OF SEPULTURE FROM EARLY TIMES.

A LECTURE on "Sepulture and Monuments from the Earliest Times" was recently delivered by the Rev. A. Dalton at the Chelmsford and Essex Museum. The lecturer, after alluding apologetically to the largeness of his subject, proceeded to state that there had been four chief or different modes of disposing of the dead:—1st, by burial; 2nd, by burning; 3rd, by exposure to the atmosphere and the ravages of the birds of the air; and, 4th, by launching the bodies on the water to be the food of fishes, as by the Hindoos; but he proposed to confine himself to the two first. The oldest records on this subject came from the Egyptians and the Jews; and, taking the Jew first, he proceeded to show that there was a sort of embalming with spices and gums, which were spread on a linen cloth; and the corpse, being dressed in a best suit, was swathed in this, something after the manner of the Egyptian,—the Jews not being buried in coffins, or if they were, they were open ones. In some cases the bodies were burnt, as in the cases of Saul and his son. The tombs were mostly hewn out of the rock. Generally, the Jews did very little in the nature of monuments to their friends, though they raised small pillars, as over Rachel's tomb; but very seldom were any inscriptions found on their tombs for many ages. He then came to the Egyptians, and described the process of embalming or mummifying. Common mummies were merely soaked in a solution of salt: others were embalmed in a more or less costly and artistic manner: the linen in which they were rolled sometimes amounted to 1,000 yards; and it was curious that upon these mummies had been found every form of bandage known to modern surgery. He then proceeded to explain and illustrate the funeral ceremonies of the Egyptians, and gave descriptions of the Pyramid of Cheops, and the tombs of the kings at Thebes. Passing on to the Greeks and Romans, he said, the former, when a person died, washed and perfumed the body, dressed it in a white robe, with a chaplet of flowers and evergreens, and then laid it on a couch outside the door,—the type of our modern lying in state; and it was then conveyed to the tomb, accompanied, as among the Jews, by hired howlers.

The Greeks buried, as well as burnt their dead; in the latter case preserving the ashes in cinerary urns. The poor were more often buried, as burning was an expensive process,—not in the earth, but on it, the body being laid down at full length, and the earth or tomb raised over it. With the early Romans the preparation of the body was similar to that of the Greeks; but the lying in state was not exactly the same. He then passed to the burials of the early Christians in the catacombs of Rome, in which the implement of martyrdom was often found sculptured on the tomb; and, coming to our own country, a description was given of the British funeral modes and monuments. He called attention to Bartlow Hills as specimens of the tumuli raised by the Romans over their dead. In the neighbourhood of them, as well as in other places in Essex, there had been discovered the graves of Roman children. Anglo-Saxon usages were next explained, followed by those of the Normans, and the gradual development of the altar tombs of the succeeding period, the lecturer concluding with descriptions of those of Queen Eleanor and the Black Prince.

STRIKES.

THE navvies at Sunderland, employed in the construction of the tunnel on the new line, from Pallion to the Lambton Drops, have left work, because the contractor would not accede to their demand for shorter hours. Since an accident took place at the tunnel, the men have only worked eight hours a-day, for which they received 4s.; but now that the tunnel has been rendered safe by timber-work, the contractor wished the men to work (as they had previously done) from six o'clock in the morning until half-past five in the evening for the same wage. To this the men demurred, and they were therefore paid what wages were due to them, and left the place.——The engine-builders employed by Messrs. Marshall Brothers, of South Shields, are on strike till their employers follow the example of Mr. Rennoldson, who acceded to his men's application for an advance of wages. There are nearly one hundred men on strike. At North Shields none of the engine-builders are on strike at present.——The joiners at Cockermouth have given notice of their intention to cease working unless their masters advance their wages from 20s., the present rate of payment, to 22s. per week; and also allow them to leave off work at four o'clock on the Saturday afternoon.——A Birmingham paper says, that various and serious differences have arisen between the builders of that town and the workmen in their employ; that propositions and counter propositions have been made concerning the matters in dispute; and that as neither of the parties seem inclined to give way, it is greatly to be feared that this disagreement will terminate in a general strike, commencing on the 1st day of May. Let us hope not.

NEW CARLISLE-BRIDGE COMPETITION, DUBLIN.

AFTER a discreditable delay, the Selection Committee have given the first three places to the undermentioned designs, and in the order given, viz.:—1. Messrs. Page & Turner; 2. Lanyon, Lynn, & Lanyon; 3. May & Pole.

They add in their report,—

"We deem it right, at the same time, to draw attention to design No. 11 (in stone), motto, 'In Memoriam,' and to observe that, while it occupies a high place in our estimation as a work of great beauty and artistic merit, we have felt it incumbent on us to exclude it from competition in consequence of the greater part of the conditions set forth in the instructions to competitors not having been complied with."

The report is signed, Richard Griffith, J. G. M'Kerlie, and Samuel Downing.

VALUE OF LAND IN THE CITY OF LONDON.

A PROSPECTUS recently published gives the following statement of prices realised by properties in London sold within the last seven weeks:—

The auction mart (freehold), containing an area of about 5,800 square feet, sold for 115,250*l.*; which gives an average of 20*l.* per foot.

The leasehold premises No. 80, Lombard-street, occupied by the Colonial Insurance Company, containing only 1,080 feet, sold to a well-known banker for 30,000*l.*, subject to a ground-rent of 500*l.* per annum for sixty-one years; which, allowing for purchase of freehold, and deducting value of new building thereon, gives 37*l.* per square foot.

The leasehold premises in Finch-lane, lately occupied by the London and Middlesex Bank, containing only 680 feet, realised 10,100*l.*, and this subject to a ground-rent of 500*l.* per annum; which, allowing for purchase of freehold, and deducting value of new building, gives about 30*l.* per square foot.

LONDON VEHICLES.

THE changes in the manner and appearance of the carriage traffic of the metropolis, during the last quarter of a century, is very marked; and amongst these changes the most important, perhaps, were the introduction of the Hansom cab; the swift-running Pickford's vans; the heavy covered waggons which convey merchandise, &c., from the docks to the City warehouses; the Parcels Delivery Company's carts; and more recently the improved and enlarged style of omnibuses drawn by three horses. Mr. Shillibeer, who started the first omnibus in the metropolis, has a painting of this public carriage: it has three horses, and is large, and very much of the same appearance as those which have been only recently introduced, except that there is no accommodation for passengers in front. At present there seems to be a retrogression to close boxes of the very narrowest calibre. The other day we saw several of the steam fire-engines turning out, and rattling along the streets; a striking picture, with their steam and smoke, brightly polished steel work, firemen, and horses. The last and most important of these changes is being accomplished by the advance of railways into the heart of the population and the busiest neighbourhoods. Now the locomotive has made its way to Pimlico and Charing-cross, and soon its noise and whistle will be mingled with the notes of the bells of St. Paul's.

AN AMATEUR ON MODERN BUILDINGS.

SIR,—The true principles of architecture should be the same everywhere. The fundamental principles, at which not even the little-minded critics of the present day can cavil, are truth, appropriateness, and beauty. Truth leads the way; appropriateness is certain to follow; and together they will form true beauty,—the beauty which the Greeks conferred on their buildings and which the Edwardian architects conferred equally on theirs.

If we wish truth to show itself in the piles of buildings we are now everywhere erecting, we must at once abandon stucco. Stucco, rusticated in imitation of stone, is a trick fit, if fit at all, only for gin palaces. May I ask your readers if any of them have seen the *improvements* (ill-treated word!) in Bloomsbury, about Russell-square. I have the misfortune of residing in that locality, and have seen them progress. I have seen pieces of wood stuck in the bricks, and projecting, covered with plaster, and made into a cornice. Then there are massive keystones in square-headed windows, the keystones being constructed on the same principle, or rather on the same unprincipled plan as the cornice. Then the whole is surmounted by a balustrade, which sets off the dirty chimney-pots, of all shapes and sizes, which appear in the background. But I am happy to say that, in the city of London, I see buildings which restore my peace of mind. Take, for example, the warehouses erected for Messrs. Moses & Davis, in Cheapside. This, with the exception of the ground-floor and cornice, is of brick; not a brick building *à la* Baker-street, but one of the most richly ornamented buildings in the city. Take another example, a much plainer building this time,—Messrs. Prew's establishment in Holborn: this immediately strikes the eye as being a satisfactory building, though its ornament is very slight.

A great element of truth in architecture is, in my opinion, the distinct division of the different stories, giving to each its proper adornment, and not carrying columns or pilasters up the whole front of the building. I consider the various façades of St. Paul's Cathedral far more beautiful than those of St. Peter's, at Rome; and for this reason, that in the former each of the two stories has its own separate order, while in the latter one gigantic order is placed over the two stories.

If we consider various buildings in London, we shall see which are the most pleasing to the eye. Take the Goldsmiths' Hall, for instance, a ponderous building; its ornament, so freely bestowed, being inadequate to the task of giving it an appearance of lightness. This ponderousness is produced entirely by the columns round it, which extend up the entire building. Similar to this is the Gresham College, at the corner of Basinghall-street, which is treated in precisely the same way. The Mansion House is another building of the same class; and the Royal Exchange would have been much more handsome if the order had been omitted in its flanks, and confined entirely to the principal front. I do not see any objection to a portico *in antis* covering more than one story. The portico is something more than a mere ornament: it is too large, and too prominent a feature for that: its ostensible purpose is for protection from the weather, and has therefore nothing to do with the stories and windows of the building to which it is attached. It is not my object here to discuss its use, abuse, or disuse; but if its use be not very great, I may venture to suggest that the sooner it is done away with in London the better; for not one portico in twenty is made as beautiful as the importance and size of the feature demands.

The London and Westminster Bank is a happy example of a regular entablature, with architrave, frieze, and cornice placed over two stories of windows, without the other parts of the order to support it. The space between the windows is occupied by rusticated piers. Now, if these piers extended from the basement to the entablature uninterrupted in any way, they would become equivalent to pilasters, and the whole façade would be as faulty, in this respect as any of those mentioned above; and if they were to be divided into two stories, the lower one would cease to be a part of the whole, supporting the entablature, which would entirely depend upon the upper story, and become in consequence disproportionately large. But both these extremes are avoided by taking a middle course. The taste and skill of the talented architect caused him to introduce a string-course,

without ornament, which runs along the whole façade between the two stories, and which passes through the piers,—dividing them, it is true, but not sufficiently so to disconnect the upper and lower portions. They are divided into two stories, but still remain one whole, and that forms a beautiful façade.

One of the latest new erections in the City is that in Threadneedle-street, for various companies, of which you gave a view in your last number. It contrasts favourably with its neighbour the Telegraph Office, which, besides being daubed over with stucco, has no bold horizontal lines to mark the different stories. Opposite these buildings, in Cornhill, is one of great beauty, belonging to the Universal Marine Insurance Company, which serves to illustrate the principle I am advocating. Many others might be instanced; some almost entirely without ornament, yet beautiful, simply because this great element of truth (which is beauty in itself) is observed.

It may be noted that Sir Christopher Wren usually preferred to put two rows of windows in his churches—the lower and smaller to light the space under the galleries—to having one row, which would be cut in two by a hideous gallery.

In conclusion I must draw attention to a warehouse in Newgate-street, nearly opposite the hall of Christ's Hospital, in which the horizontal and perpendicular lines are both very bold, giving the building a very peculiar appearance, by cutting it into oblongs and squares of various dimensions. This should certainly be avoided; for, though checks do very well for tablecloths and trowsers, they do not suit the fronts of buildings, even though the buildings themselves are for the sale of such goods.

Ex stirpe.

MURMURS FROM THE SEA-SIDE.

In last Saturday's *Builder*, in the article headed "Variorum," is a notice of a little book on Smoky Chimneys. *A propos* of them, will you allow me to describe to you some chimney-pots which I saw at St. Leonard's, and which were designed to prevent the smoke returning down the chimney in windy weather? Around the pot at equal distances, four conical tubes are placed wide mouth downwards, with openings at the top into the large central tube, so that the smoke, if beaten back by the wind into the pot, may escape by these tubes instead of returning into the room. I am unable to speak from experience of the efficacy or otherwise of this arrangement, but the superintendent of the works where they are made (in Hastings) assured me that he had never known one to fail, and that they are especially effective when placed upon the short chimney-shafts of attic chambers.

In addition to their alleged merit of curing smoky chimneys, they possess the great recommendation of being pleasing to the eye. Generally speaking, a red clay chimney-pot is a most unsightly feature to a house, but these are really picturesque, especially when seen against the deep blue sky that usually smiles above a seaside or country town. For stone or stuccoed houses the pots are baked white; but the form is not so appropriate for that as for the Elizabethan red. Great variety of outline can also be obtained by arranging the chimneys in stacks of 3, 4, and 6; and again, by placing the pots diagonally on alternate stacks, and square on the intermediate ones.

The manner in which house building is progressing in and around Hastings and St. Leonard's is something marvellous. Rows of good houses are springing up in all directions, with plenty of small ones too; and for miles out the downs and fields are studded with buildings in all stages of construction. The inhabitants attribute part of this bustle and excitement to the Princess's recent visit; and one line of houses, facing the sea, and very near to "Bo-peep" station, whither St. Leonard's now extends, attests the fact by bearing for its name "Sandringham Place."

While writing about St. Leonard's, the *Builder* being a general reformer, I will touch upon a subject wherein there is scope for amendment, there as elsewhere—the enormously long morning service to which, in some churches, congregations are condemned to listen.

Last Sunday I went to St. Mary Magdalen's, having learned that the Bishop of Carlisle was to preach in behalf of the "House for Invalid Gentlewomen." Not because I run after Bishops as such, but the church named chanced to stand conveniently, and, better inducement still, I much approve of the worthy charity for which he was to plead. Bearing in mind the unusual length of the preceding portion of the service—second lesson having been seventy-five, and the Gospel fifty-four verses long—one would have thought the Bishop would have endeavoured to make his sermon particularly short and pithy. Instead of this he rambled on (I must say it), in a feeble voice and uncertain manner, until all one's charitable enthusiasm was entirely extinguished; and not until one o'clock, when we ought all to have been on our way home again, did he touch upon the charity for which he stood there to bespeak our aid. After the sermon was ended, the collection was made from pew to pew; a lengthy process, that necessitated the slow and measured reading of the whole of the offertory sentences, and then we had to listen to—*praying* it was out of the question, fatigued as we were by that time—the prayer for the church militant. Not until a quarter past one o'clock were we allowed to escape again into the fresh air.

People really do not go down to the sea-side to be shut up in a narrow pew of a small and crowded church to listen for two hours and a quarter to "vain repetitions." Oh! that we could have, somehow or other, a little more of the soul and a little less of the body of religion bestowed upon us by our clergy!

A Seaside Lounger, but not an Idle One.

ZINC ROOFS.

A correspondent some time since asked for information as to the right way to lay zinc. I shall be happy to give him the information, for there is more importance in the mode of laying and the arrangement of woodwork than is yet generally known. Many roofs are spoiled for want of care in these points.

After getting good falls and drips, I lay every sheet of zinc perfectly free for contraction and expansion, and in such a manner, that in the event of alteration or cuttings in roofs, the sheets, 8 feet by 3 feet, can be taken up and relaid without injury to the metal.

I lay none but Devaux's pure Vieille Montagne zinc, and refuse the work unless the proper thickness is allowed, viz., No. 13 as the minimum, and 14, 15, and 16 as the best gauges I prefer to employ. Good zinc thus laid is quite as lasting as lead, if the woodwork is arranged according to directions given.

I covered the Victoria Station, Pimlico, for Messrs. Devaux, and every sheet now lies perfectly free and unconfined: no wet has got in through the zinc since the roof has been covered. The skylights and iron gutters have let wet in on several occasions, but on examination it was found that the zinc was perfectly sound and watertight.

James W. Tyler.

ECLECTICISM IN ARCHITECTURE.

Sir,—Here is the question of the moment that some of the lecturers of the season, either at South Kensington or the Architectural Exhibition, should grapple with,—"*l'éclecticisme est la plaie de l'art*,"—that memorable motto of Lassus at the competition of Lille. Would that it had struck deeply into the minds of our architects. It is the "sore" we have suffered from for the last ten years, and we are still in full state of disease. Our architects rush to France and Italy, are struck with the grandeur of French and Italian Gothic, and come home and build churches and domestic buildings with as much French character as they can introduce. They entirely forget that Gothic grew up in every land, province, and even county, in accordance with the materials at hand, the wants of the people, continuing the traditions as heretofore practised, expressing the national mind and poetry fully, and being every way in harmony with the surrounding scenery. It seems to me to be monstrous to design a village church with pretension in many details of a French cathedral, and to set that down on the banks of the Thames in Berkshire. The whole thing is out of place. The true little Berkshire church is just the very thing required for the spot. On the score of reason, it appears so unreasonable to introduce foreign effects into England. I want to know who would go and build a Berkshire church in Pisa or Carcassonne. To build a Belgian town-hall in England is absurd, since the very municipal constitution is wholly different; and, moreover, they are used for different purposes, to say nothing of the inappropriateness of style. Moreover, I see in this eclecticism a total want of all love for national tradition and poetry. No man can be thinking of his own poetry and traditions when he is thinking of the grandeur, massive magnificence, and superabundant richness of detail of French Gothic. Our architects say French Gothic is so grand. Yes, I know it; but it is the very quality all out of place in English scenery, and a quality having no tradition in this country. Here our scenery is small, confined; our architecture is homely, without any pretence. There can be no prospect for good architecture so long as our architects are not Englishmen!

It is common in modern work to see all the pretentious grandeur of a cathedral, the superfluity of ornament and detail, given to a parish church. Our modern architects cannot do village work: they do not seem to be able to build a Sussex or Berkshire village church. The love of French grandeur and massiveness has entirely ruined their taste for simplicity. Cardinal Wiseman is to lecture on the future of English architecture; will he grapple with these points?

A. W. T.

SANITARY MATTERS.

Wellingborough.—Any one who has watched the march of improvement in Wellingborough during the last ten or twelve years, remarks a local paper, cannot fail to be struck with the progress the town has made. Perhaps the sanitary improvements are the most numerous, and the best carried out, of any. A glance at these may not be uninteresting, as no one knows how long the drainage of the town was a disgrace and a nuisance. The rising generation know little or nothing of the filthy cesspools, the surface drains, and the manure-heaps which were allowed to exist under the eyes and noses of the inhabitants of Wellingborough of bygone years. The principal parts of the town were very bad in this respect, and the yards, byways, &c., were abominable in many instances. It grew to such an extent, that a reformation was imperative, and the establishment of the local Board of Health, and the laying down of the new sewerage, were the result. There was a good deal of bungling in the undertaking, which elicited (and not unnaturally) a considerable amount of grumbling among the ratepayers, in consequence of the unworkmanlike manner in which the work was done. Penurious landlords growled at the expense, and tenants grumbled at an increase of rent. But the thing has worked well in spite of all obstacles: the town is well drained; and few, we imagine, of either landlords or tenants now regret the alteration, or would like to go back to the undrained past.

Guisbro'.—A meeting of the ratepayers of Guisbro' has been held in the Toll-Booth, for the purpose of considering the desirability of adopting a general system of drainage throughout the town, either upon the plan submitted to the inhabitants by the late Mr. Richard Mason, C.E., or upon some other approved plan. The hall was crowded to suffocation, popular interest in the question having doubtless been much intensified by the awfully rapid rate of mortality which has characterised Guisbro' for some time past, and more especially during the last twelve months. The following resolution was carried by a large majority;—"That it is the opinion of this meeting that the town absolutely requires a system of town drainage; and that steps be taken at once to carry out that most necessary and desirable object." Afterwards the following resolution was carried *nem. con.*;—"That a committee of the following gentlemen (viz. 37 of the representatives of all kinds of property in the town) be formed, and requested to consult some practical engineer, with a view of carrying into effect the plans of the late Mr. Mason, C.E., or some other plan equally effective; and also to obtain estimates and discuss the most advantageous mode of carrying out the drainage of the town, reporting the results of their labours to a future general meeting of the ratepayers."

Llanelly.—Fever and smallpox are prevalent in this place, several persons having recently died from these epidemics.

Sanitary Reform.—The registrar-general has recently brought under the notice of the authorities of the great cities of Europe a plan for securing returns of diseases and of the weather, simultaneous with those of London. Vienna, which is the seat of one of the greatest medical schools of Europe, has already responded to his application: he expects to receive from that city a regular series of returns, which cannot fail to afford interesting comparisons with those of London. Vienna is about to adopt (not before they were needed) many of the sanitary improvements which have proved efficacious in England; and Dr. Glatter, a zealous officer in the city council, will be able to measure their effects on the reigning disease and the rate of mortality.

AYLESBURY.

IN consequence of the proposed erection of a new Corn Exchange on the site of the White Hart Hotel, in the Market-place, as we mentioned recently, the central block of buildings now called the Market-house is to be removed, and the space left open, which must improve the surrounding property, as well as also the health of the inhabitants. A correspondent writes,—"This old building is a copy of the Temple of the Winds, at Athens, but this fact will not save the doomed structure, which is neither useful nor ornamental. The White Hart is one of the oldest inns in the county. In Cromwell's time it was kept by one Gilby, a Parliamentarian, zealous for the cause of the Protector. One night a way-worn traveller sought rest and refreshment; but mine host soon found out the rank of his guest, who proved to be the Earl of Rochester, flying for his life. Gilby informed the earl it was his duty to arrest him, but the earl's promises overcame the innkeeper's scruples: he assisted him to escape, and after the Restoration was substantially rewarded. The casual visitor to Aylesbury fond of old paintings will find some old portraits in the smoking-room of the George Hotel. Among them is one of the celebrated Countess of Pembroke, sister to the Duchess of Cleveland. These portraits, if not original, are very excellent copies, and worthy the attention of the connoisseur."

CHURCH-BUILDING NEWS.

Lowestoft.—The foundation of the new Bethel, which is situate in Commercial-road, was laid on the 26th of October last by Mr. Edward Leathes, and the building was opened for divine worship on the 4th instant. The building was neatly decorated by Miss J. W. Gowing. The cost of the erection, including the land, was about 530*l*. The building is designed in the Early English style of architecture, and consists of a nave and chancel. The nave is lighted by a five-light window in the gable, and double lights in every bay: the chancel window is in three lights. The glass used is the rough cathedral plate cut in quarries, with a tinted margin. The roofs are open, with stained and varnished timbers. A system of ventilation has been adopted by match boarding on the under side of the rafters. Open benches are used, with oak-stained seats and backs, and cast-iron stands of a Gothic pattern. As soon as the walls are thoroughly dry, it is proposed to embellish them with suitable passages of Scripture. An appropriate external feature has been added to the nave gable, in the form of an anchor, with cable complete, carved in relief upon a stone shield, with the words "Sailors' Bethel" thereon. Mr. James Balls, mason, executed the carving. The committee purpose, immediately funds permit, to build a class-room in the rear of the building, for which a space has been left. The edifice was designed by Mr. W. O. Chambers, of Lowestoft, architect, under whose superintendence the church has been erected. The contractors were Messrs. J. Newson, jun., T. Tuck, and C. Scarlett, the fittings being supplied by Mr. J. W. Ling.

Bovinger.—The parish church of Bovinger, near Ongar, has been re-opened after considerable alterations in the chancel, which were carried out under the direction of Mr. Chancellor, of Chelmsford. The work, carried out by Mr. Brown, of Bocking, consists of a new arch of Bath stone, carved oak stall seats, encaustic tiles, and a timber roof, the cost of which has been defrayed by the rector, the Rev. W. M. Oliver.

Buckingham.—The ceiling of the church, with its ornamentation, is found to be in such a decayed state that immediate repair has been found necessary, and the church is now filled with a scaffolding and repairs are going forward.

Birchington.—At a meeting of the church restoration committee, Mr. C. N. Beazley, the architect, attended to submit to the meeting the result of an interview with Messrs. Gascoigne & Godden, of Canterbury, the builders. It was determined that the works should be commenced immediately after Easter, and the contracts were to be signed in a few days. The chancel will be restored, new roofed, and seated, at the expense of the Dean and Chapter of Canterbury. The tower and spire will be repaired, and the bells re-hung, towards which the Trinity Board have contributed a grant of 100*l*. In the nave and aisles the roofs are to be thrown open, repaired, and re-tiled. The floor will be levelled. New open sittings of uniform character will be placed, affording accommodation for 542 (double the number of the present sittings). The cost of this part of the work will be about 1,200*l*., of which about 700*l*. or 800*l*. have been already got together.

Shipton-on-Stour (Worcestershire).—For the erection of buildings at the Cemetery, in accordance with the design of Mr. W. H. Knight, of Cheltenham, the contract tendered by Mr. H. Parker, of Shipston, builder, has been accepted, at the sum of 1,500*l*., the work to be completed by November next. The buildings, with the exception of the lodge, will be of stone, and consist of two chapels, one for the Church of England, the other for Nonconformists, with a tower and spire, central dome 70 feet in height, and a porter's lodge at the entrance gate. The land purchased for the cemetery is on an eminence, and commands a view of the surrounding district.

Hadlip (Worcestershire).—The church here has been restored. Mr. W. J. Hopkins, consulting architect to the Diocesan Church Building Society, furnished the plans and superintended the work; and Mr. Warner, of Malvern Link, was the builder. The chancel has been rebuilt, and lengthened eastward. The east window is a triple-light Early Decorated. Windows of single and double lights are in the south and north walls. The roof is open timber work, with arched principals, and of the same height as the nave roof. A vestry on the north of the chancel opens thereto by a segmental pointed arch, and a similar arch separates the nave from a new transeptal chapel on its south side. A two-light Decorated window has been opened in this chapel, and the windows of the nave are of the same style, single and double lights, the former being old remains and the latter new work. A portion of the walls of the nave is old, and so is the tower. The latter stands at the west end, is of nearly the same width as the nave, and through its base is the principal entrance to the church. The church is warmed with a hot-water apparatus supplied by Messrs. Badger, of Worcester. Externally the roofs and main portion of the walls are new, tiling parti-coloured.

Gloucester.—"It is understood," says the local *Chronicle*, "that an attempt is being made in earnest to carry out a thorough renovation of our beautiful cathedral. We hear that the Lord-Lieutenant had a conference with the dean and resident canon on Tuesday last. As this first meeting was strictly private, we have no means of ascertaining what occurred. It is, however, believed, that an immediate appeal to the county was determined upon, and that the Lord-Lieutenant, the Lord Bishop, the Chancellor of the diocese, and Mr. Holt, the registrar, gave promises of liberal contributions."

Cheltenham.—The friends of the Rev. George Roberts are about to build a new church. It is estimated that 10,000*l*. will be required, and 3,000*l*. have been subscribed towards that sum.

Hyde.—Exertions are now being made for the erection of a church in the parish of St. Thomas, wherein divine service may be performed in a more seemly manner than is possible under existing circumstances. The architect for the new church is Mr. J. Medland Taylor, of Manchester, who has prepared designs for a church to seat about 800 persons. The material is stone, to be obtained from local quarries, for the most part with dressings of Hollington stone.

Gateshead.—The committee of the proposed Church of St. James have resolved to call in the aid of Messrs. Austin & Johnstone, of Newcastle, architects, to prepare plans (in accordance with the instructions of the Incorporated Church Building Society) for a church to accommodate at least 530 persons, and at a cost which should not exceed in all 2,500*l*.

STAINED GLASS.

St. Michael's, London.—Ten cartoons have been ordered for one of the great windows in the new church of St. Michael's, London, from Moritz von Schwind, an artist who prepared some of the glass paintings in Glasgow Cathedral.

Springfield Church (Essex).—A painted glass window, representing Faith and Hope, has lately been inserted in this church by Mr. R. W. Peacock, to the memory of his brother, Mr. Mark Beauchamp Peacock, late solicitor to her Majesty's post-office. It was designed by Mr. Holland, of St. John's, Warwick.

St. Matthew's Church, Hastings.—A stained-glass window has just been presented to the church of St. Matthew, Tivoli, by members of the congregation and other friends, in testimony of their esteem for the Rev. John Cumberlege, B.A., who built this church in 1861. The subject is the "Ascension." Messrs. Clayton & Bell, of London, were the artists.

Rodmell Church, Sussex.—Six stained glass windows, executed by Mr. Wailes, of Newcastle, have recently been placed in the little village church of St. Peter's, Rodmill. Five of these have been presented by Mr. B. G. Windus, of Tottenham, Middlesex, the sixth being the gift of the rector, the Rev. P. de Putron. The subjects of two windows, on the south side, are from the parables of "The Good Shepherd" and "The Sower:" the third, near the baptistery, is "The Presentation of our Lord in the Temple." The three larger windows are placed on the north side, each containing two medallions, the subjects of which are taken from the Old and New Testaments, type and anti-type, "The Crucifixion" with "The Sacrifice of Isaac," "The Resurrection" with "Joseph being taken out of the Pit," and "the Ascension of our Lord" with "The Translation of Elijah."

Little Ellingham Church, Norfolk.—A three-light memorial east window has been put up in this church by Mr. F. Preedy. The principal subjects are "The Agony in the Garden," and "The Ascension," with four other Scriptural subjects in the side-lights. The work of restoration at this church has been done under the direction of Messrs. Mallinson & Healey, of Bradford, architects.

Christ Church, North Shields.—The family of the late Mrs. Coppin are placing a window in this church, in remembrance of their mother. Mr. Wailes, of Newcastle, is the artist. The centre piece is illustrative of obedience to parents, and the two other groups are "Feeding the Hungry" and "Clothing the Naked."

PROVINCIAL NEWS.

Brighton.—The widening of the King's-road and Junction-road, from Ship-street to the western entrance to the Chain-pier, is under consideration. The computed cost of this work is nearly 10,000*l*. The King's-road, opposite Market-street, must be widened 40 feet, and farther on in proportion (remarks the local *Herald*, while speaking of it), so as to make one wide sweep of promenade and roadway from one end of the town to the other.

Ipswich.—At a special meeting of the town council, the Town-hall committee report was read, the conclusion of which is as follows:—"Your committee therefore recommend that a new town-hall, museum, and library should be erected upon the site above referred to, namely, that of the present town-hall and adjoining property; that the council should authorise the expenditure of a sum of money, not exceeding 10,000*l*., for the erection of such town-hall, museum, and library; that a committee be appointed by the council to settle the details of the accommodation required in the proposed new buildings; that advertisements be issued inviting plans for the proposed buildings; and that the committee be authorised to expend a sum not exceeding 200 guineas, in one or more premiums, for securing such plans." After some discussion the report was approved of, and the sub-committee of the Estate and Paving and Lighting Committee were appointed to carry out the report.

Norwich.—The report of the St. Andrew's Hall restoration committee presented to the corporation states, that the subscription fund realised the sum of 1,437*l*. 11s. The total outlay connected with the restoration and improvements amounted to 4,489*l*. 6s. 6d., and the payments made on account of such expenditure to 2,323*l*. 18s. 8d., leaving a balance unpaid of 2,165*l*. 7s. 10d., of which in the opinion of the committee 1,741*l*. 6s. 5d. might be fairly charged upon the tonnage revenues, the balance, 424*l*. 1s. 5d., to be provided by the city committee from corporate funds. After some discussion the report was received, and the committee, consisting of the parliamentary, and bye-laws and finance committees, was appointed to consider the best mode of paying the debt, with the power of taking the opinion of counsel, and to report to the council thereon.

Doncaster.—The race committee, by a majority of seven to four, have recommended to the town council certain alterations at the stand and enclosure, which will ultimately involve a sum of at least 1,500*l*.

Books Received.

"How 'Nicely' we are (locally) Governed," with especial reference to Shoreditch, St. Luke's, and Bethnal-green. By One Who Knows. (147, Fleet-street.)

This pamphlet is coarsely written, and doubtless exaggerates greatly; but it reads, nevertheless, as if there were quite enough truth at the bottom to call for the interference of a more independent class of ratepayers than those who now usually take office. The writer asserts that the head-money, 5s. a day, allowed to members of committees when making "surveys," is an inducement to an improper class. One quotation will serve to show the straightforward character of the writer's charges:—

"The monster evil connected with our present representative system will be found amongst those who take office ostensibly for the public good, but actually to 'work the oracle' for certain contractors. The ramifications of this kind of duty pervade the whole mass to an extent that the uninitiated would hardly dream to be possible. We frequently see the sums tendered by able contractors passed over by some of the highest Boards, simply because they are not (query, confidentially?) known. This, when interpreted, must be taken to mean that the extent of their 'bleeding' capability is untried. Your 'sure' contractor is a great card with the needy scheming people who can talk, are dabsters at 'jobs,' and have abjured all squeamishness. When all other sources of refreshing gain are dried up, or become devastated, it is blandly hinted to the contractor that discount for the patriot's little acceptances would be esteemed, and forthflows the yellow clinking rill, never, probably, to return to its parent source, for somehow it never is 'quite convenient' to the patriot to regard the date on the stamped paper thus adorned with his signature."

VARIORUM.

"Fast in the Ice," "Fighting the Whales," and "Away in the Wilderness," are the titles of three little books forming part of "Ballantyne's Miscellany," published by Nisbet & Co. The object of the Miscellany, according to the preface, is to place within the reach of the working classes, information now only to be found in expensive books, and this object is carried out very well. A little tale is worked up in each volume so as to convey the information in an attractive form. The books will please boys of all classes.——"Curiosities of Savage Life." By Jas. Greenwood (S. O. Beeton, Strand). In two smart volumes (first and second series), Mr. Greenwood has brought together from various sources a large amount of interesting matter concerning savages of all countries. Treated of under the head of subjects, as "Warfare," "Incidents of personal Peril," "Religious Rites," and so on, the various countries are not kept very clear; but be that as it may, it certainly makes amusing reading. Each volume has nine illustrations, printed in colour, besides a considerable number of wood-cuts. ——The illustration-producing-power of the Messrs. Dalziel is immense. Their "Illustrated Series of Standard Works" is but one example, though a great one. This includes "The Vicar of Wakefield," now in progress; and "The Arabian Nights' Entertainments" (Ward & Lock, Fleet-street), both very fully illustrated and very cheap. Touching the first of them, the engraving is certainly better than the designs. The Vicar and his family are old friends of ours, and we do not find their likenesses in any of the illustrations of Part No. 1. The group at the head of Chapter I., in fact, is enough to deter any man, with an instructed eye, from turning over another leaf. It is simply abominable. In the "Arabian Nights'," too, we are forced to confess that very few of the illustrations give us any pleasure, notwithstanding the excellent names on the title-page. The sooner the Messrs. Dalziel have a little serious talk with their artists the better.

Miscellanea.

Artificial Rainbow.—M. J. Duboscq, it appears, has contrived for the French theatre a method of imitating the rainbow, of which *Cosmos* speaks highly. M. Duboscq employs an electric light, obtained with the aid of 100 Bunsen elements. The first lenses of his optical apparatus render the rays from this source parallel, and transmit them through a rainbow-shaped hole in a screen to a double convex lens of very short focus, from which they pass to a prism, and emerge with sufficient divergence to make an effective rainbow on a screen about 6 yards off. This rainbow is said to be brilliant even when the whole scene is lit up.

Accident.—A building in the course of erection, in George-street, Pontypool, and intended for a warehouse, has tumbled down. A workman received considerable injury.

Church Building Acts. In the Commons last week, in reply to Mr. F. Powell, the Attorney-General stated that it was intended to introduce a Bill for consolidating and amending the Church Building Acts and New Parishes Acts shortly after Easter.

New Pier for St. Ives.—The works of the new pier will be commenced forthwith. Mr. Robertson has contracted to construct it for 15,500*l*. It will be 600 feet in length, commencing from the Castle Rocks, and is to be completed in August, 1865.

Public Parks and the Value of Surrounding Property. In connexion with the recent debate on the Hulme and Chorlton Public Park, in the Manchester City Council, and also with the suggested public park at Warrington, and that forming at Oldham, the following statement is worth notice:—The central park in New York has cost that city nearly 1,500,000*l*., and it has increased the taxable valuation of the surrounding property nearly 5,500,000*l*.

Railway to Cape Clear.—We are told that Mr. Forsyth, engineer to the Board of Works, has been inspecting Cape Clear, where it is the intention of the Board to erect a pier and breakwaters in the south harbour. The work is estimated at 6,000*l*., of which sum Sir Henry W. Becher has contributed 500*l*. We are informed, on good authority, says the *West Carbery Eagle*, that Mr. Forsyth inspected the adjacent islands with a view to the extension of the West Cork Railway to Cape, *viâ* Baltimore.

Victoria Tower.—In reply to a question in the Commons last week, Mr. Cowper said that the Thames Embankment Commissioners had made a valuable recommendation for the enlargement of the space near the Victoria Tower, and for the extension of Old Palace-yard to the river bank south of the Tower, by which the wharves and buildings in the neighbourhood would be cleared away, and all elements of danger removed. This recommendation, however, involved the expenditure of a large sum of money, and therefore he was unable to say when he should be able to submit a proposal to the House.

Electric Telegraph Companies.—It may be useful to our readers to know that an Act of Parliament (26 and 27 Vic., c. 112) was passed last session for regulating the construction of electric telegraphs. Under the 22nd section of this Act, where telegraph posts are placed within ten yards of a dwelling-house, or the wires across an approach to a dwelling-house, without the consent in writing of the owner or occupier, it is competent for either owner or occupier to give notice to such company to remove the posts and wires, and unless the posts or wires are removed, or the differences arranged, to send a copy of the notice so given to the Board of Trade, who will make "inquiry and examination," and "hear and determine the matter of objection." The decision of the inspector from the board is to be final, and costs are to be awarded against the company, or not, as he may direct.

Bolton Fish Market.—A new fish-market is about to be erected in the immediate vicinity of Bolton market. The basement and sub-basement of the new edifice will be divided into ice cellars, cellars for cleaning and storing fish, and all the requisite conveniences, and will also have two shops on the side which faces Bridge-street. The ground-floor will be devoted entirely to the purposes of the fish-market: it will measure 113 feet by 34 feet inside, and be divided with light ornamental iron screens into the requisite number of stalls, having a side entrance in Rushton-street, and the principal one in Corporation-street. The sides of the building will be arcaded both internally and externally, the piers and dressings being of stone, and the intermediate spaces of red brick, with the exception of the basement, which will be built entirely of rock-faced stone. The market will be lighted principally from, and ventilated by, the lantern, which extends from end to end of the roof. The roof itself will be framed with wrought-iron elliptical principals, springing from carved and moulded stone consoles, connected with longitudinal beams: over these boarding will be fixed to carry the slates. Mr. J. W. Best, of Bolton, is the architect. The outlay will be between 4,000*l*. and 5,000*l*.

A Liverpool Chapel Builder.—Mr. George Pennell, of Liverpool, has given to the Primitive Methodist Connexion four chapels and five houses, all of which are situate in Liverpool, and are worth about 5,000*l*.

Map of Seat of War in Jutland. Mr. Wyld, of Charing Cross, has published a map of the Environs of Fredericia, and the country around the Little Belt, on a good large scale, although the map is small in itself. The references are clear, and the positions of the Austrians are marked.

Brussels.—The Bishop of Oxford is to lay the first stone of the new English church here on Tuesday, the 5th of April. It has been long contemplated, but a site has only lately been obtained after great difficulty and very large expenditure. The church is to be built of the Antwerp bricks, is to accommodate about 700 people, and is to have a lofty tower and spire. The site is in the Rue des Drapiers, leading out of the Avenue de la Toison d'Or. Mr. R. J. Withers is the architect.

The Shrine of St. Manchan.—At the last meeting of the Royal Irish Academy, Sir William Wilde read a paper "On the Shrine of St. Manchan." He exhibited the ancient shrine, which was at the Dublin, London, and Kensington Exhibitions. It exhibited much interest in point of its artistic excellence. He had thought a great deal on the subject of restoring it, and summoned a jury, consisting of Dr. Petrie, Dr. Todd, the president, Mr. West, and Mr. M'Carthy, and he had, to the best of his skill and ability, with their assistance, effected a restoration, which he exhibited amidst applause.

The "Victoria Park," Belfast.—The *Newsletter*, commenting on our paragraph as to the proposed park for Hulme and Chorlton-upon-Medlock, Manchester, at a cost of 30,000*l*. says: "From the foregoing, the people of Belfast can form some idea of the large amount of money required to *purchase* a site for a public park in other places; yet here, in this good town of ours, although sixty acres are lying waste, under the ridiculous title of 'The Victoria Park,' nothing is being done to form them into what they were intended to be."

Lecture at the Handbridge Workmen's Reading-room.—We have given a specimen of the sort of musical entertainments given at the workmen's clubs, and may now show what sort of lectures are occasionally given. On this occasion Mr. Davidson, the lecturer, who had previously given several lectures on animated nature, devoted his discourse to man himself. First he sketched and explained the skeleton. Then he showed the position and action of the lungs in respiration. Then followed a rapidly sketched view of the front of the chest and arms, showing the action of the muscular system; also, by means of tapes, he showed how the tendons act on the various joints. Next he proceeded to add, within the previous sketch, the brain and spinal cord, showing the origin and action of the nervous system. The skull came under consideration, and was compared with that of the monkey tribe. This necessarily led to "faces," in connexion with which theme Mr. Davidson sketched the sensible face, the inquisitive face, the peaceful face, the combative face, &c., showing the alteration made in the expression by the modification of any one feature. The lecturer went into the subject of the influence of alcohol on the stomach, liver, blood, and brain. You have seen, he continued, how the excessive use of spirits and strong drinks destroys the coating of the alimentary canal, and injures the digestive powers—mixes with the blood, which, poisoned and infected, rushes on like a stream of fire to the brain,—the brain! the source of thought and action. The man is maddened, is driven to acts of violence, and becomes degraded to the level of the brute. But this is not all! Worse still,—the malady thus brought on ends not with ourselves, but is carried on to your children—those sacred charges, those lovely flowers in the garden of life given to cheer and bless us. Yes, in them does the physical and mental weakness engendered by our own neglect of the laws of health re-appear, and they become stunted either intellectually or bodily. Our wives, whose lives have become a portion of our own, whose every thought and feeling is devoted to us,—do men think of them and of home when they drown their hearts and their brains, and outrage the laws of health? The lecturer at the close was greeted with three hearty cheers, which showed well how his instructive lecture was appreciated.

OXFORD CORN EXCHANGE.—The new exchange has proved so great a success that the directors recommend a dividend of 20 per cent. on the first year; and that for the future the charge for stands, with desks, be reduced from three guineas to two guineas per annum, including admission.

THE BRISTOL ACADEMY OF FINE ARTS.—The new exhibition of the Bristol Fine Arts Academy is one of the largest known for years, and the paintings are said to be of a high order. The number exhibited is 150 in excess of last year; the oil-paintings being 334 and water-colour 147. There are many local works exhibited; and many metropolitan artists are also exhibitors. At the Graphic *Conversazione*, which is considered the formal inauguration of the exhibition, a large and fashionable company attended. The principal object of attraction in the corridor on the "Graphic" floor was a large painting by Turner, lent by Mr. E. Fripp.

THE BRADFORD RESERVOIRS.—Sir George Grey has stated in the House of Commons, that the mayor of Bradford has informed him that the fears expressed by Mr. Ferrand, in the Commons, as to the Doe Park reservoir, are much exaggerated; that some repairs are going on at the reservoir; and that with the concurrence of the engineer instructions have been given to draw off the water, so as to prevent the possibility of accident while the repairs are going on. He further informs Sir George, that the engineer of the Bradford Corporation is Mr. Leather, of Leeds, and that he had nothing whatever to do with the construction of the Sheffield reservoir. Sir George had no information as to any other reservoirs belonging to the Bradford Waterworks. Mr. Ferrand, however, still insists that the Bradford reservoirs are in an alarming condition.

A PEOPLE'S HALL, CLUB, AND INSTITUTE FOR BATH.—A public meeting, convened by the mayor in consequence of a numerously-signed requisition, has been held in the Guildhall, to consider and adopt measures for the erection of a people's hall in Bath. There was a good attendance, including the mayor, who presided, the recorder, and several members of the People's Hall Committee and the Penny Reading Association. The following resolutions were passed by acclamation:—That it is desirable to promote the erection of a people's hall and club, with the following objects;—1, A large room for lectures, concerts, readings, and other means of improvement; 2, Smaller rooms for meetings of clubs, friendly societies, classes, and committees; 3, Facilities to the people to obtain tea, coffee, and, if possible, more substantial meals; 4, A reading-room and free library; 5, An office for a trade and service register; that a company of limited liability be formed, called the Bath People's Hall and Club Company, Limited, to consist of a capital of 6,000*l.*, of which 5,000*l.* shall be raised in shares of 1*l.* each, and 1,000*l.*, if possible, in donations; that the site which appears most eligible is the whole or part of the White Hart premises, and that a strong representation be made from this meeting to the town council, stating the desirability of erecting a people's hall and club, and requesting them to deal liberally with the promoters; and that the management of the affairs of the company be invested in twenty-one directors, two-thirds of whom shall be tradesmen and operatives, the directors to be appointed by the shareholders as soon as one-half the capital has been subscribed.

UTILIZATION OF GAS IN COKE BURNING.—At the Selly Oak Nail Works, Birmingham, a new system of coke burning has been adopted, whereby the offensive and pernicious gases which usually escape to taint the atmosphere and injure vegetation, are turned to good account, according to the *Midland Herald*, by being conveyed to a neighbouring furnace or fire, either for blast-heating, generation of steam, or other purposes where they can be usefully consumed. The new process consists in connecting a series of coke heaps with flues leading into one main flue communicating with the steam-boiler, the draught of which produces a beneficial effect; for as the coal heaps are lighted for burning into coke, the gas and sulphur thereby produced are drawn to the main flue, and from thence to the boiler, where they ignite and pass in streams of flame among the fines of the boiler, generating steam with very slight use of slack. There is a complete removal from the coal of all sulphurous properties, and thousands of tons of coal now considered of no use, may thus be converted into strong and good coke. The invention is patented by Messrs. J. & C. Hawkins, of Walsall.

BLACKFRIARS BRIDGE.—The construction of the temporary wooden bridge across the Thames, at Blackfriars, is so far advanced towards completion, that it is confidently expected to be opened in the first week of April.

EXTENSION OF SUNDERLAND PARK.—At a meeting of the Sunderland town council it has been resolved to complete the purchase of ground belonging to the North-Eastern Railway Company, for the extension of the park, the sum of 10,000*l.* being voted for that purpose.

THE NEWCASTLE-UPON-TYNE SURVEYORSHIP.—For this office, as we have before stated, there were 53 applicants, from the list of which seven were selected for further reduction. The council last week proceeded to the election, and the voting was as follows:—Mr. Parsons, 14 votes; Mr. Fulton, 12; Mr. Lamb, 11; Mr. Britton, 8; and Mr. Stephens, 3. A vote was then taken for the three highest, which gave—Parsons, 17; Lamb, 16; Fulton, 15. The final voting was—Lamb, 26; and Parsons, 22. Mr. Lamb was consequently elected.

NEW ENGRAVING PROCESSES, SUNK AND IN RELIEF.—Some curious experiments, executed before the Emperor and Empress of the French by M. Dulos, are thus described in *Galignani's Messenger*:—A sheet of copper, drawn on with lithographic ink, is subjected to the voltaic pile, by which it receives a deposit of iron on those parts not covered by the ink. The ink is then removed by means of benzine, and the sheet is then in the state of an engraved copper-plate—that is, the design is sunk into the plate, and the deposit of iron constitutes the lights. The plate is now dipped into a bath of cyanide of silver: under the action of the galvanic current, silver is deposited on the copper, and not on the iron. The plate is then taken out, and mercury poured upon it. Now, since mercury exercises no action on iron, it can only attack the silver which has filled up the lines originally made with lithographic ink. Hence, where those lines are, we now see mercury standing up in relief. Plaster of Paris is now poured over the plate in this condition, and thereby an impression is obtained in which the reliefs made by the mercury are reproduced hollow. [Why the ink was removed, or silver deposited, in this case, is not clearly stated.] By the aid of the pile copper may be deposited on this impression, and the hollows will then come out again in relief. One thus obtains not only a plate which may be printed from, but a matrix which will give an indefinite number of plates. For typographic engraving, the sheet of copper, after being drawn upon, receives a coating of silver, which only goes upon the metal, leaving the lithographic ink untouched. The ink is removed, as before, by benzine. The surfaces which are thus laid bare are oxydised, and mercury is again poured on the plate. This metal recoils from the oxydised lines, and collects on the silver, making reliefs where the lights ought to be. An impression in plaster is obtained as before, and the electro-chemical plate which is to be used for the printing has the lines of the drawing in relief as required.

THE ADYTIC LOCK.—In this lock, says the *Worcester Herald*, security against picking is sought and obtained, not by complication of the interior, but by absolutely closing the works of the lock from all observation and from all manipulation with any picking instrument. In the first model the key or check is conveyed into the lock by means of a kind of slotted piston, which moves through a collar or bearing, which, being somewhat longer than the slot, as a matter of course cuts off all communication by means of any instrument used in an attempt to touch the works from the outside. In the second model this object is still more effectually achieved by means of a secondary bolt, which, having in its centre a key-hole or receptacle for the check, enables the same to be introduced to this inner key-hole, provided the latter be brought into coincidence with the outer key-hole of the front plate and door. In order that the check so introduced may pass into the lock itself, it is necessary to move the secondary bolt, which, at the same time that it conveys the check into the lock, also bolts up the outer key-hole, thus closing all access from without, even to the inner key-hole. This same secondary bolt can never be brought into such a position as to allow even an air passage to the lock, thus rendering gunpowder of no more avail than picks to effect an entrance. But perhaps the most novel and valuable feature in this new system of lock-making is the certain retention of a false key or check on its first introduction.

DR. ESSELBACH, superintendent of the Persian Gulf telegraph, had been ill with fever for several days, and the triumphant success of the laying of the telegraph so affected his mind as to produce temporary insanity. In one of his paroxysms of madness he jumped overboard and was drowned.

NEW PATENT-OFFICES.—In reply to a question put by Lord A. Churchill to the First Commissioner of Works, Mr. Cowper said he had been in communication with the Commissioners of Patents with the view of finding more extended accommodation both for their offices and their museum. There was, however, great difficulty in making a suitable arrangement. At present no site had been found. That between Fife House and the proposed embankment of the Thames was not at present available, and could not be disposed of until the river works had made greater progress, and streets had been laid out on each side in connexion with the embankment.

UTILIZATION OF THE METROPOLITAN SEWAGE.—A meeting of the Ward of Portsoken was held, on Wednesday in last week, Alderman Sir Francis Graham Moon in the chair; when resolutions supporting the scheme of Mr. Thomas Ellis and his tender for the sewage were unanimously agreed to, copies being ordered to be forwarded to the chairman of the Metropolitan Board of Works, and the town clerk, for presentation to the Corporation of London, and to each member of the House of Commons, Corporation of London, Metropolitan Board of Works, Metropolitan vestries, and district boards of works.

IMPROVED DWELLINGS FOR THE INDUSTRIAL CLASSES.—The first ordinary meeting of this association was held on Saturday, at the Mansion House. The Right Hon. Lord Stanley, M.P., took the chair, supported by several influential men and members of the corporation. Lord Stanley said that most of the circumstances relating to the society were told in the report. The sum of 100*l.* had been paid in part payment of the purchase-money, 840*l.*, for eight small freehold houses, known as Hamilton-row and Hamilton-place, Bagnigge-wells-road. An agreement for a lease of ninety-nine years for a piece of land close to the Tunnel Pier, Wapping, had been come to with the governors of the Bridewell Hospital. The Board was also negotiating for a lease of eighty years from the Metropolitan Board of Works for a plot of ground in Redcross-street, closely abutting on New Southwark-street, Borough. Further negotiations had been entered upon to obtain sites at King's-cross, Victoria-street, and in Shoreditch. The subscribed capital of the society was 27,200*l.*, and upwards of 3,000*l.* had been received in advance of calls, on which they were receiving 5 per cent. Some delay in building had been occasioned, but without any loss of money. There had been some difficulty in finding sites, but this had been partially surmounted. The estate in the Bagnigge Wells-road had been obtained upon the most favourable terms. This plot was about 4,000 square feet, and the estate at Wapping, upon which buildings would be erected to cost 7,075*l.*, was 19,000 square feet. These were very conveniently situate for the purposes for which they would be used. The Southwark estate had a 56 feet frontage, and was in extent 28,000 square feet. Those at Wapping were paying up to the present time, upon an average, about 8 per cent. They proposed to put up there three blocks of houses, and the remainder in obedience to the demand of the neighbourhood. The buildings proposed to be erected would accommodate sixty families. The contract had been entered into for the buildings at Southwark, which would involve an expenditure of 3,000*l.*

TO ARCHITECTS.

THE Advertiser, who has just completed his articles with a gentleman in the country of good general practice, wishes for an ENGAGEMENT in London. Address R. K. "Suffolk Chronicle" Office, Ipswich.

TO ARCHITECTS AND SURVEYORS

THE Advertiser, a Young Man just leaving an Architect's Office, desires an immediate RE-ENGAGEMENT, where he will have the opportunity of becoming practically acquainted with building, surveying, inspecting works in progress, measuring up work, taking out quantities, &c. Is a good draughtsman and penman, a neat and quick tracer, and has a little knowledge of estimating. A small remuneration only required, the Advertiser's chief object being improvement as above. First-rate references City preferred.—Address, TEMPLUM, Post office, Throgmorton-street, City.

AN expert accurate Surveyor, Leveller, and Contourer, used to extensive Railway, Estate, and Sanitary Surveys, requires EMPLOYMENT. He is a fair draughtsman, and was thirteen years on the levelling, detail, and examination departments of the Ordnance Survey.—Address, H. R. Post-office, Southport, Lancashire.

A COMPETENT BUILDER'S CLERK, of great practical experience, a first-class estimator, measurer, &c.; well acquainted with builders' and contractors' accounts, and used to extensive works, is open to an ENGAGEMENT. References, &c. unexceptionable.—Address, W. W. Post-office, No. 31, Kingsland-crescent, Kingsland-road, N.K.

TO BUILDERS, &c.

A YOUNG MAN, aged 23, of seven years' experience (apprenticeship) in a Builder's Office, wishes for an ENGAGEMENT.—Address, G. C. T. 19, Grosvenor-row, Pimlico, S.W.

TO MASTER PLUMBERS, BUILDERS, &c.

A STEADY Married Man wishes a PERMANENCY; is a good Jobbing Plumber, and to fill up time with Painting and Glazing Good references. Address, A. B. 17, Drummon-street, Euston-square.

A GENTLEMAN, having a thorough knowledge of Gothic construction and ornamentation, as applied to furniture, and having also a complete practical knowledge of the cabinet and upholstery business, seeks an ENGAGEMENT as MANAGER or ASSISTANT.—Address, A. Z. Onwbyn's Newspaper Office, 1, Catherine-street, Strand.

TO LARGE CONTRACTORS.

AS TIME or BOOKKEEPER.—Thorough knowledge of Theodolite and Level. Unexceptionable references.—Address, B. V. Peel's Reading Room, Fleet-street, E.C.

TO ARCHITECTS, BUILDERS, AND SURVEYORS.

A PARENT is desirous of PLACING his SON, aged nearly 16 (who is well educated, intelligent, and has a taste for drawing), with a highly respectable and old-established Firm in good pool practice, whose business comprises the above branches, or at least two of them, and where he could reside with the principal. Most unexceptionable references will be given and required.—Address, G. E. care of Engall, Sanders, & Engall, Cheltenham Auction Mart.

TO BUILDERS AND OTHERS.

A FOREMAN BRICKLAYER is open to an ENGAGEMENT as YARD FOREMAN, or to Carry out Buildings. No objection to rod work, having his own scaffolding.—Address, A. 12, Alma-road, Junction-road, Upper Holloway, London.

A BUILDER'S SON, brought up to the bench (aged 20), of steady Christian character, is in want of a SITUATION in an Office. Can keep a prime cost, manage a set of books, is of valuable service in measuring, estimating, drawing, &c; quick and accurate in figures, and possesses a good knowledge of geometry.—Address, W. T. Rev. E. Illingworth, South-street, Hammersmith, W.

TO BUILDERS AND CONTRACTORS.

A THOROUGHLY Practical Bricklayer is open to an ENGAGEMENT as WORKING FOREMAN or otherwise. First-class references from last employers.—Address, Y. Z. 22, High-street, Brighton, Sussex.

TO ARCHITECTS OR ENGINEERS.

A YOUNG GENTLEMAN desires a SITUATION as DRAUGHTSMAN. Well acquainted with general office duties. High testimonials.—Address, A. T. B. Post-office, New Wandsworth, S.W.

LAND SURVEYING.

A THOROUGHLY COMPETENT LAND SURVEYOR desires an ENGAGEMENT on Railway Work, or to Survey by the acre (or otherwise). First-class references.—Address A. Z. Post-office, Rowland's Castle, Hants.

FOR CONTRACTORS and RAILWAY COMPANIES.—2,000 BARROWS FOR SALE.—Barrows, Keys, Trenails, Bushes, Sleepers, &c. and all other Contractors' Plant.—Apply to W. P. FRANCE, 20, Bridge Wharf, Paddington.

GUTTA-PERCHA MILL-BANDS. The Gutta-Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving bands, Lathestraps, &c fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractability and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Basses, Union joints, Flasks, Bottles, Bowls, Toilet trays, Curtain-rings, Galvanic Batteries, Tablotype Trays, &c. &c. manufactured by the Gutta-Percha Company, and sold by their Wholesale Dealers in town and country.
THE GUTTA-PERCHA COMPANY, PATENTEES,
18, WHARF ROAD, CITY ROAD, LONDON.

Crucible and Cement Clay, Wholesale and for Exportation.
EVERY ARTICLE MANUFACTURED AT THE ABOVE WORKS.
N.B. These goods are supplied to the largest Steel Smelting, Armour Plate, and Crucible Works in the World, to which references can be given on application.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr. ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and hardness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees, 17, Millbank-street, Westminster

BRICKS, PANTILES, AND PAVINGS.

Illustrated Price Catalogue, of numerous Designs, in various styles (free), on application to

COTTAM & CO. IRON WORKS,
2, WINSLEY STREET, OXFORD STREET,
LONDON, W.

PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862, AWARDED FOR EXCELLENCE.

The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.

It is an entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 3 feet wide is equal to an ordinary Range 8 feet wide.

Extracted from the "London Daily Telegraph," May 19th, 1862.

"INTERNATIONAL EXHIBITION, CLASS 31.

"Of the most recent inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of their Ranges is the placing of the OVEN and ROASTER one above the other, instead of *side by side*; and the ROASTER is constantly replenished with fresh air."

INVENTORS AND MANUFACTURERS,
JONES & ROWE, WORCESTER,
AGENTS FOR LONDON: HARRISON, SON, & WILSON

AWARDED 1862
ESTABLISHED 1744.
AUSTIN'S IMPERIAL PATENT SASH
and BLIND LINES.
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

JOHN BOARD & Co. beg to inform Builders, Contractors, and Merchants that they continue to manufacture CEMENTS and BLUE LIAS LIME, at Dundaff, near Bridgwater, and from increased appliances to their works, are enabled to execute orders for the same to almost any extent.

HYDRAULIC LIME and ROMAN CEMENT, manufactured by LLOYD JONES & CO. Halkin Works, Holywell, Flintshire. The Halkin Hydraulic Lime is the same as used in the construction of the Liverpool Docks, Manchester, and various waterworks, collieries, and mines throughout the country, being so long celebrated for its strong cementitious and connecting powers for masonry in water. Can be supplied by rail or water to any part of the kingdom, either in lump (loose), or ground, and in barrels and bags. The limestone can be had in full cargoes, also their cement in barrels, which is of a very superior quality and warranted pure. Orders to be accompanied by a banker's reference. Apply at the Works; or to E. & W. AARON, Agents, 56, South John-street, Liverpool

PURE HYDRAULIC LIME, Manufactured from the best HALKIN MOUNTAIN LIMESTONE, same as supplied for the construction of the Liverpool and Birkenhead Docks.
The HOLYWELL LIMESTONE COMPANY are prepared to deliver the above, in lump or ground, packed in bags, into waggons, at the Holywell Station of the Chester and Holyhead Railway, or on board vessels at Greenfield Wharf, Chester River.
Prices and particulars furnished on application to Mr. EVAN EVANS, Manager, Parry's Mine Works, Holywell, Flintshire.
The Company guarantee the quality of the Lime to be equal to that used by the Engineer of the Liverpool and Birkenhead Docks.
Agents wanted. No applications attended to without a banker's reference.

and see Specimens at the Office of
Messrs. FINDER, SIMPSON & SONS, 39, Saville-row, London, and at the Museum of Practical Geology, Jermyn-street, W.

This stone (which is a perfect oolite) is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to plane it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

*** The above WEATHER STONE is 1s. 9d. per cubic foot, delivered in London.

W. & J. FREEMAN, Merchants in the various descriptions of STONE, GRANITE, and SLATE, for Engineering and Building Purposes. Supplies direct from the Quarries, by vessel or railway. Direct communication with the principal ports for EXPORTATION. Wharf prices and estimates for special contracts, including quarry work or other labour, forwarded on application.—Office, 27, Millbank-street, London, S.W.

LOVEGROVE'S PATENT DOUBLE AND TRIPLE JUNCTIONS AND INSPECTION SHAFTS for small Sewers and Drains, by the use of which the Sewers and Drains may be examined and cleansed without disturbing the surface of the ground; adapted also for ventilation of Sewers and Drains.
DRAWINGS, WITH PRICES, WILL BE FORWARDED FREE, ON APPLICATION.

CHEAP, LIGHT, AND DURABLE ROOFING.
CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.
1st. It is a non-conductor—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the Timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.
INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.
CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and
DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c. preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.
Samples, testimonials, and full instructions, on application to
CROGGON and CO. 2, DOWGATE-HILL, London; and 2, GOREE PIAZZA, Liverpool.

CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862.
By Her Majesty's  Royal Letters Patent.
F. McNEILL & CO. of LAMB'S BUILDINGS, BUNHILL ROW, LONDON,
Manufacturers and ONLY Patentees of
THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.
Patronized by
HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY,
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK.
And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland, at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses, and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen, who have exclusively used it, sent free to any part of the town or country. DRY HAIR FELT, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with a good article, and in lengths best suited to their roofs. The original works where the above roofing is made are F. McNEILL & CO.'S Manufactories, LAMB'S BUILDINGS, BUNHILL ROW. Roofs covered with McNEILL'S FELT to be seen at the CAMPS of ALDERSHOTT, CURRAGH, SHORNCLIFFE, and COLCHESTER, upwards of Three Millions of Feet; also the GREAT EXHIBITION BUILDING of 1862, of nearly One Million Feet. A Liberal Discount allowed to the Trade.

HUBBUCK'S PATENT WHITE ZINC PAINT.
By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.
ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.
CHEAPNESS. Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."
THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

The whole to be sold and cleared positively in three days. May be viewed one day previous. Catalogues on the Premises; and of the Auctioneer, King-street, Hammersmith.

MARINE RESIDENCE, with 24 acres of Land, distinguished as Appley House, an important Freehold Property on the Coast, at Ryde, Isle of Wight. With immediate possession.

MESSRS. FULLER & HORSEY are instructed by the Trustees to SELL by AUCTION, at the MART, London, on WEDNESDAY, JUNE 15, 1864, at TWELVE o'clock, in one lot, APPLEY HOUSE and ESTATE, an important freehold property, situate within a few minutes' walk of the pier, at Ryde, Isle of Wight, possessing singular natural advantages as a residential estate, with numerous sites for the erection of villas, so greatly in demand in this much-admired watering place, Appley being now the only land available for such a purpose with a sea view, in close proximity to the seashore, near the town of Ryde. The estate is literally within a ring fence, the northern boundary being girt by the sea, and secured by a strong substantial esplanade in a line with the principal esplanade of Ryde, leading to the pier. The land here, which rises precipitously, is covered with a thickly-wooded plantation, the removal of which would (if desired) enable the owner to build a terrace of houses on the esplanade, without at all interfering with the privacy or views of the higher portion of the property. The surface of the land is undulating, rising to the house on the north side, sloping towards the south, and then rising again to a considerable elevation, commanding very extensive and uninterrupted views from far beyond Southend, on the east, extending to Southampton water on the west. The residence, which was enlarged and improved by the late owner, is approached by a carriage-drive through parklike grounds, with two lodge entrances from the Appley road, and from the St. Helen's turnpike-road, near St. John's church.

The internal arrangements comprise a suite of three reception rooms, well proportioned dining room and gentleman's room, numerous principal and secondary bed chambers and dressing rooms, bath room, work room, nursery very complete domestic offices, and capital arched cellaring, an ample supply of spring water from a deep well, and large underground tanks for soft water. In the front and rear of the house are the north and south lawns, noted for the luxuriance of the grass, and other choice shrubs and trees; the whole encircled by rich park-like land, studded with stately timber, including many very fine oaks, chestnuts, limes, and elms; the latter towering high and forming with the rookery established on their branches, a conspicuous object from Ryde Pier. At a short distance from the house are modern stables and farm buildings, including a dwelling house for the gardener, stalling for four horses, double coach house, cow-house, cart-house, laundries, pitting and fruit rooms, a range of forcing and succession houses, large walled kitchen garden, with choice wall fruit trees, and espaliers, and a well stocked orchard. The Appley road forms the southern and western boundary of the estate, and affords a large available frontage, while the land itself contains valuable stone for building and brick earth, and the remarkable air that at present complete seclusion of Appley House need be but little if at all deteriorated with, by judicious building operations under the control of the proprietor. The increasing value of building land at Ryde, abundantly confirmed by the fact that all marketable land has within the last few years been let at high rents for building purposes; the singular natural advantages possessed by this property, its sea frontage, and proximity to the pier, combine to render this estate deserving attention, either as a building speculation alone or combined with the possession of one of the most charming marine residential properties in the Isle of Wight. Printed particulars, with plans, are in course of preparation, and may be had of Messrs WALLIS, House Agents, and at the Pier Hotel, Ryde; at the Portland Hotel, Southsea; the George Hotel, Portsmouth; of Messrs. THOMAS & HOLLAMS, Solicitors, Commercial Sale Rooms, Mincing-lane, London, E.C.; and of Messrs. FULLER & HORSEY, Bullter street, London, E.C. to whom all applications to view the property must be addressed.

On the KNUSTON ESTATE, Irchester, Northamptonshire, the property of A. J. Gulston, esq.—To TIMBER MERCHANTS, BUILDERS, and OTHERS.

MESSRS. PENDERED & SON are favoured with instructions to SELL by AUCTION, on THURSDAY, the 7th of APRIL, 1864, upwards of 600 TREES, of first-class quality, viz. 200 elms, many of dimensions of more than 100 feet each, 100 ash, many from 40 feet to 50 feet each; 250 beech, long, straight, and clear, from 80 to 100 sycamore, alder, and other timber—particulars in next week's paper.

Important Sale of Extensive Freehold Estates in Oswaldtwisle, near Blackburn.—Preliminary Notice of SALE by AUCTION.

MR. GRUNDY begs to announce that he will very shortly offer for SALE by PUBLIC AUCTION, in Lots, the several FARMS and PROPERTIES forming the Stanhill Estate, together with other Properties adjoining, all situate within the Township of Oswaldtwisle, in the Parish of Whalley, and County Palatine of Lancaster, and containing together upwards of 300 acres of good new and productive land. Full particulars and plans will shortly be published, and further information may be obtained on application to Messrs. WETALL, BROTHERS, Whiteash Mills, Oswaldtwisle; also on application to the Auctioneer, No. 83, King-street, Manchester; or on application at the Offices of Messrs. ROBINSON & SON, Solicitors, Blackburn.

21st March, 1864.

To Builders and Others.—70,000 best Purple Slates.

MR. BUCKLAND will SELL by AUCTION, at MERTON'S WHARF (Barry, Brothers), Millstreet, Rockhead, Bermondsey, on WEDNESDAY, MARCH 30th, at ONE o'clock, in suitable and convenient LOTS, a CARGO of about 70,000 best PURPLE SLATES, direct from the Quarries, in North Wales, of various sizes.—Catalogues may be had on the Premises, and at the Auctioneer's Offices, 89, Cannon-street West, City; or will be sent by post on application.

MARBLE CHIMNEY-PIECES, &c. for SALE by AUCTION.

MR. R. E. GUDGEON will SELL by AUCTION, at the CORN EXCHANGE, Winchester, on WEDNESDAY, MARCH 30th, 1864, upwards of TWENTY MARBLE CHIMNEY-PIECES, in statuary, veined, black, rouge royal, and other marbles; about 200 of white and yellow deals, some prime old oak suitable for church furniture and carving purposes; about 300 scaffold poles, and 50 dozen of ropes; a force pump; about 30 feet of wrought-iron palisading, with standards and gate; and sundry useful articles. Sale to commence at ONE o'clock. Catalogues may be had at the Auctioneer's, Piazza, Winchester.

BROOKS & SCHALLER'S AUCTION SALES of ESTATES, HOUSES, GROUND RENTS, REVERSIONS, ANNUITIES, ADVOWSONS, &c. will take place at GARRAWAY'S, on the FIRST and LAST TUESDAY of each month. A nominal charge of £2 per cent. on the purchase money.

The INDEX, published Monthly, of Estates, Country and Town Houses, Shootings, &c. to be Let or Sold, is issued free on application.—AUCTION and ESTATE OFFICES, 25, Charles-street, St. James's, London.

IMPORTANT to COAL PROPRIETORS, CAPITALISTS, and OTHERS.—The owners of valuable MINES of COAL, lying within and under a compact freehold estate of upwards of 1,200 acres, situate within three miles from the important manufacturing town of Blackburn, Lancashire, are prepared to treat for the absolute SALE of the COAL, or to enter into favourable arrangements for leasing the same for a term of years. Good turnpike roads intersect the estate, and the same is within very easy distance of railway and canal.—For further particulars apply to Messrs. ROBINSON & SON, Solicitors, Blackburn.

A FREEHOLD MANSION TO BE SOLD. The elegant Furniture may be had at a valuation. There are four reception-rooms, two being 50 feet in length; eleven best bedrooms; excellent domestic offices and four cottages; suitable servants' offices, extensive ornamental grounds, with green houses, in all 28 acres; gravelly soil; near Sunningdale Station, South-Western Railway, half a mile from Windsor Park, and fifty minutes from the Waterloo Station.—Apply to J. MAY, Esq. Solicitor, 67, Russell-square.

SANDOWN, ISLE of WIGHT. Opening of the Railway. BUILDING LAND, opposite the proposed Pier, and in full view of the magnificent Bay, on leases for 1,000 years.—Apply to Mr. WITHERS, Timber Merchant, Sandown.

FINE CLAY PROPERTY.—TO BE LET, on Royalty, sixty miles from town, with every convenience, and siding laid down into North Western Railway.—Apply to C. W. ORFORD, 58, New-street, Birmingham.

BUILDING LAND TO BE LET, on advantageous terms, for 99 years, situate at Merton, Surrey within 10 minutes' walk of the Wimbledon Station, or 45 minutes of the City.—The plan of Estate can be seen, and particulars obtained, upon application to Mr. EDWIN SHAES, Surveyor's Office, Christ's Hospital, Newgate-street, from TEN till FIVE o'clock.

WESTMINSTER CHAMBERS, opposite the India Offices in Victoria-street, and close to the Houses of Parliament.—OFFICES and CHAMBERS TO BE LET.—Apply to Messrs. BANKS & BARRY, 27, Sackville street, or G. S. SIDNEY, Esq. Secretary to the Mutual Tontine (Westminster-chambers) Association, Limited, No. 39, King-street, Cheapside, E.C.

UPPER NORWOOD.—TO BE LET, close to the Palace, ELIGIBLE SITES for Small Villas, a class of building in great demand. Advances if required.—Apply to Mr. GREEN, 25, College-hill, Cannon-street, E.C.

LORDSHIP ROAD, Stoke Newington.—TO BE LET, on Building Leases of 99 years (at low ground rents), several PLOTS, eligible for semi-detached villas and terraces.—Apply to Mr. RODDA, Bouverie-road, Church-street, Stoke Newington.—N.B. Bricks delivered on the estate at low prices.

BRICK EARTH.—TO BE LET, on Lease, LAND, containing good Brick Earth, situate three miles south of London.—Apply to Mr. W. H. DEAN, Surveyor, 33, Fenchurch-street, London, E.C.

TO MANUFACTURERS and OTHERS.—Very eligible PREMISES at Rotherhithe, TO BE LET, or a long LEASE TO BE SOLD, at a ground rent, comprising a range of buildings, with folding gates, and numerous dwelling rooms, including a house and shop, and will be divided to suit a purchaser or tenant.—Apply, by letter only, to Y. Z. Mr. Fisher's, 4, Dover-road, Borough, S.E.

THAMES BANK, PIMLICO.—Extensive PREMISES, with the partial use of a Private Dock entering from the Thames, suitable for a Builder's Establishment or a Factory, TO BE LET on LEASE for a long term at a moderate rental.—Apply to Messrs. SCURRY & WRIGHT, Surveyors, 6, Salisbury-street, Strand, W.C.

ABBEY WOOD, near Lessness Heath.—Eligible FREEHOLD LAND TO BE LET, in large Plots, for the Erection of Villa Residences. Term 99 years. Advances if required. For plans and particulars apply to W. WILLIAMSON, 9, Essendon-terrace, Morden-road, Plomstead, S.E.; or to Mr. ROBERTS, Architect, 55, Laurence Poultney lane, City.

BUILDING LAND in the best part of St. John's Wood.—A choice PLOT, with Road and Sewer along the whole frontage, surrounded by finished property of an excellent description, occupied by first-class tenants, TO BE LET at a moderate rent.—Apply to IFOLD & HUGHES, 33, Manchester-street, W.

TO BUILDERS and OTHERS.—WATFORD, Messrs. STUCKAY & PHIPPS have TO LET, on a building lease, a most desirable PLOT of LAND, near the Station, with a frontage of 230 feet to the main road. For full particulars as to class of buildings, rent, &c. apply at 48, Cornhill, E.C.

SEAFORD, near NEWHAVEN, SUSSEX. To Builders and Others.—Eligible PLOTS for BUILDING, with full sea view, and comprising every advantage, TO BE LET on Building Leases for 99 years. The railroad is to open in less than a month, and it runs directly into the centre of this beautiful and sheltered watering place. For plans and particulars apply to Messrs. WM. G. HABERSHON & PITE, Architects, 30, Bloomsbury-square, London, W.C.—Mr. OCKENDEN, Bailiff of Seaford, will show the ground.

MONEY.—IMMEDIATE CASH ADVANCES on FREEHOLD and LEASEHOLD PROPERTY, REVERSIONS and ANNUITIES, WINE, SPIRIT, and TIMBER WARRANTS, DEBENTURES, SHARES, &c.
Mr. RICHARD CROSSLEY, 17, Moorgate-street, Bank, E.C.

TEN THOUSAND POUNDS READY TO BE ADVANCED by the TEMPERANCE PERMANENT LAND and BUILDING SOCIETY, on Freehold or Leasehold Property, for any period of years not exceeding fifteen, the mortgage being redeemable by equal monthly instalments. Interest (in addition to a small premium), 5 per cent. on the balance each year.—Apply to HENRY J. PHILLIPS, Secretary, Offices, 34, Moorgate-street, London, E.C.
NOTE.—More than a quarter of a million pounds sterling have been advanced upon house property alone.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION (Incorporated by Act of Parliament, 1850), 14, RUSSELL STREET, Covent Garden, W.C. ADVANCES from 100l. to 1,000l. upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, no competition or auction, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.
EDWARD HARPER, Secretary.

BY Order of the Secretary of State for India in Council.—Notice is hereby given, that TEN JUNIOR APPOINTMENTS in the Engineer Establishment of the Department of Public Works in India will, in the year 1864, be open to PUBLIC COMPETITION.

The Competitive Examination will accordingly be held in this Office in the month of JUNE next. Full printed particulars of the conditions on which Candidates will be admitted to the Examination may be obtained at this Office, on application, either personally or by letter, addressed to the "Under Secretary of State for India," India Office, London, S.W

India Office, 10th July, 1863.

SCIENCE and ART DEPARTMENT of the COMMITTEE of COUNCIL on EDUCATION.—The Examinations of Science Schools and Classes, by the Science and Art Department, commence on the 2nd MAY, and, with the intermission of Whitsun week, last till 4th JUNE. Applications for the examination of a School or Class must be made not later than the 16th APRIL. The form to be filled in (Science Form No. 119), will be furnished on application to the Secretary, Science and Art Department, South Kensington, London, W. But candidates in London or the neighbourhood who may not be near any place where a local Examination Committee has been formed, may be examined at the South Kensington Museum, by sending in their names and stating the subjects in which they wish to be examined, before the 15th APRIL.—By order of the Committee of Council on Education.

THE PAINTERS' COMPANY'S EXHIBITION of DECORATIVE and IMITATIVE WORK will take place in JUNE, 1864, with Two extra Prizes of Five Pounds each for Decoration.—Terms to be had (from Eleven till Two) at the Hall, 9, Little Trinity-lane, City. Applications to be made for space before the 21st APRIL.

NEW ZEALAND EXHIBITION, 1865. The Commissioners appointed by the New Zealand Government hereby give Notice, that an EXHIBITION of RAW MATERIALS, Machinery, Manufactures, and Fine Arts, will be held in the City of Dunedin, Province of Otago, New Zealand, in JANUARY, 1865, when rewards for merit, in the form of honorary certificates, will be given in the several sections, with the exception of Fine Arts Space will be reserved for Exhibitors from the United Kingdom and her Colonies, the Continents of Europe and America.—Copies of the decisions, forms of application for space, and further details may be obtained from the undersigned.—By order,

JOHN MORRISON, Agent for the New Zealand Government.

New Zealand Government Agency, 3, Adelaide-place, King William-street, London, February, 1864.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72–74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand; and also for the consequent more extensive execution, by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work.

72–74, Bishopsgate-street Within, November, 1863.

BILLING'S PATENTS.—CHIMNEY TERMINALS.—THROAT VALVES.—NOTICE to ARCHITECTS.—The Proprietors of these PATENTS have given the Widow an Interest in the same, and have considerably reduced the prices of the Articles, trusting that by so doing these useful Inventions may be introduced more generally in all new Buildings.—For prices, apply to the Manager, Mr. TYLER, 12, Abingdon street, Westminster, who will also afford any information, he having been for many years engaged with the late Mr. BILLING, in the practical curing of Smoky Chimneys.

COMPETITIONS.

BOROUGH of IPSWICH.—To ARCHITECTS.—The Corporation of Ipswich are desirous of receiving DESIGNS for a TOWN HALL, including a Municipal Library, A premium of 100 guineas will be given for the design which in the opinion of the Council is the best; and a premium of 50 guineas for that which in their opinion is the second best. Both the premiated designs are to become the absolute property of the Corporation. The plans, specifications, and estimates must be distinguished by a motto or device, and be accompanied by a sealed envelope, containing the name and address of the competitor, bearing a corresponding motto or device to that on the plans, &c.—Plans of the site, with printed statements of the rooms and conveniences required, and of the conditions to be observed by competitors, may be had on application to the Town Clerk. The competing designs, &c. must be delivered at the Town Clerk's Office, Museum-street, Ipswich, on or before the 23rd day of MAY next.

S. A. NOTCUTT, Town Clerk.

Ipswich, March 24, 1864.

ARMY CONTRACTS.—TENDERS will be received at this Office until TWELVE o'clock, Noon, on TUESDAY, the 26th APRIL, 1864, from persons who may be willing to enter into CONTRACTS for SUPPLY FLOUR (RATION and HOSPITAL) and MEAT, in such quantities as may be required from the 1st JUNE to 30th NOVEMBER, 1864, for the use of Her Majesty's Forces stationed at Aldershott Camp and within the command.

The above being three distinct Contracts, separate Tenders are required for each description of Flour, and for Meat.

Forms of Tender and Conditions of Contract may be obtained on application at this Office, by letter addressed to the Senior Commissariat Officer, or in person, between the hours of TEN and FOUR o'clock.

The Tenders must be properly filled up, signed, and delivered at this Office (under closed envelope, marked on the outside "Tender for Army Supplies"), and no Tender will be noticed unless made on forms obtained from this Office, and delivered by the hour appointed

Commissariat Office, Aldershott, 30th March, 1864.

TO SEWERAGE CONTRACTORS and Others.—TOWNSHIP of TRANMERE, CHESHIRE.—The Local Board for the District of Tranmere are prepared to receive TENDERS for the CONSTRUCTION of about 2,500 Yards of MAIN BRICK SEWERS, and about 7,100 Yards of PIPE SEWERS, with the necessary Junctions, Branches, Man-holes, Gullies, and Ventilating Shafts. Plans, Sections, and Specifications, &c. may be seen on application to Mr W. A. RICHARDSON, C.E. Surveyor to the Local Board, on and after TUESDAY next, the 22nd instant and copies of the Specifications and a Form of Tender may be obtained on payment of 5s. Sealed Tenders, made on the printed forms only, to be addressed to me, and left at my office not later than THURSDAY, the 28th APRIL next. The Local Board do not hold themselves to accept the lowest or any Tender.—By order,

GEORGE LLOYD, Law Clerk to the Local Board.

Public Offices, Holt hill, Tranmere, March 4, 1864

SOUTHPORT HOTEL COMPANY (Limited).—Parties desirous of CONTRACTING for the WORKS necessary for the ERECTION of the HOTEL, may obtain the plans and Bills at the Office of Mr. A. D. COFFEY, Architect, 44, Princess-street, Manchester, upon the payment of Two Guineas, which sum will be returned to the competitors not engaged upon the finishing of the Tenders. The drawings will be ready for inspection on and after the 21st of MARCH. Sealed Tenders to be addressed to the Directors, care of W. SALE, Jun. Esq. Secretary, Messrs. SALE, WORTHINGTON, SHIPMAN, & SEDDON, Solicitors, Booth-street, Manchester, on or before APRIL the 21st.—The lowest or any Tender will not necessarily be accepted.

SOUTH NORWOOD.—To BUILDERS.—TENDERS are required for FINISHING the Two newly-erected VILLA RESIDENCES, Shurst-road.—Plans and specifications may be seen at Mr. ORWOOD'S, 12, City-road, on and after the 25th inst. to the 7th APRIL, between the hours of TEN and FOUR.—Further particulars may be known on application to Mr. H CARD, Surveyor, Lewes, where the Tenders are to be sent in on or before the 8th of APRIL. The proprietor does not bind himself to accept the lowest or any Tender,

CONTRACTS.

STAUNTON COMMON DRAINAGE.—To CONTRACTORS.—The Drainage Commissioners for the Arterial Drainage of Staunton Common are prepared to receive TENDERS for STRAIGHTENING, WIDENING, and DEEPENING the LETTON BROOK or LAKE.—Plans, sections, and specifications may be inspected at the Office of Mr. T. CURLEY, C.E. Broomy-hill, Hereford.—Sealed Tenders to be sent to the undersigned on or before TEN o'clock on SATURDAY, the 9th of APRIL next.—Printed quantities and forms of Tender will be supplied by Mr CURLEY.

J. F. SYMONDS, Clerk to the Commissioners.

15, Bridge-street, Hereford.

TO BUILDERS.—The Committee for carrying out the proposed Enlargement of St. Cuthbert's Church, Bedford, invite TENDERS for the EXECUTION of the WORKS, according to the plans and specifications prepared by Mr. PENROSE, Architect, which will be deposited at the House of JOSEPH MANTON, Parish Clerk, No. 86, The Grove, St. Cuthbert's, from MARCH 14th to APRIL 2nd, inclusive.—Any further information may be obtained on application to Mr PENROSE, Chapter House, St. Paul's Churchyard, London. Tenders, sealed and endorsed "Tender for the Enlargement of St. Cuthbert's Church," to be sent to the Rev. CHARLES TROLLOPE, Rectory, St. Cuthbert's, Bedford, by TWELVE o'clock at noon on MONDAY, APRIL 4. The Committee do not necessarily accept the lowest or any Tender. The contractor will be required to find security for the due execution of the works.

Bedford, March 10, 1864

TO CONTRACTORS and OTHERS.—The Board of Works for the Wandsworth District are desirous of receiving TENDERS for the CONSTRUCTION of the following SEWERS, in the parish of Clapham, viz. about 2,420 feet of 3 ft. 3 in. by 2 ft. 3 in. and 300 feet of 3 ft. by 2 ft.—one brick; and also for the LAYING of about 4,380 feet of STONEWARE PIPE SEWERS of various sizes. The specifications, plans, and forms may be seen, and all further information obtained, at the Office of Mr. C. W. JOHNSON, Surveyor, Manor Cottage, Larkhall-lane, Clapham, between the hours of TEN and FOUR. Tenders are to be sent in, under seal, to the Board as below, on or before TUESDAY, the 5th of APRIL next, and are to be endorsed "Tender for Clapham Sewers." Persons tendering must be in attendance at the Office of the Board on WEDNESDAY, the 6th of APRIL next, at FOUR o'clock p.m. when the Tenders will be opened. Security will be required for the due performance of the contract. The Board do not pledge themselves to accept any Tender.—By order of the Board of Works for the Wandsworth District.

ARTHUR ALEX. CORSELLIS, Clerk to the Board.

Battersea-rise, Wandsworth, S.W. 12th March, 1864

BRISTOL and PORTISHEAD PIER AND RAILWAY.—CONTRACT for WORKS.—The Directors of the Bristol and Portishead Pier and Railway Company are prepared to receive TENDERS for the CONSTRUCTION of about 16 miles of their RAILWAY, with Approaches, Works, and Conveniences. Drawings of the proposed works may be seen and after the 12th day of APRIL next, at the Office of the Company's Engineers, Messrs. McCLEAN & SHEEHAN, 2, Great George street, Westminster, S.W. or at the Secretary's Office, 6, Clare street, Bristol. Contractors who wish to Tender, may obtain lithographic copies of the drawings, bills of quantities, specification, and form of Tender, on application to the Engineers, or at the Secretary's Office, on payment of 5s. 5s. Tenders must be addressed to the Secretary, 6, Clare street, Bristol, on or before the 21st day of APRIL next. The Directors do not bind themselves to accept the lowest or any Tender

JAMES FORD, Chairman.

Bristol, March, 1864. J. F. R. DANIEL, Secretary.

TO IRON FOUNDERS, SMITHS, and OTHERS.—The Directors of the Rochester, Chatham, and Strood Gas Light Company are prepared to receive TENDERS, which must be delivered at their Office, 36, High street, Rochester before TEN o'clock in the forenoon of WEDNESDAY, 6th APRIL, 1864, for the SUPPLY of about 15 Tons of WROUGHT IRON TUBES, WROUGHT-IRON STRAPS, and SCREWED BOLTS and about 4 TEN CHESTER GATES. To be delivered free on their Works, Rochester.—The specification and form of Tender may be had on application at the Office of the Company, where also the drawings may be seen. The Directors do not bind themselves to accept the lowest or any Tender.—By order,

W. SYMS, Secretary.

TO TIMBER MERCHANTS and OTHERS.—The Directors of the Rochester, Chatham, and Strood Gas Light Company are prepared to receive TENDERS, which must be delivered at their Office, 36, High street, Rochester, before TEN o'clock in the forenoon of WEDNESDAY the 6th APRIL, 1864, for the SUPPLY of about 60 Loads of DANTZIC or MEMEL FIR TIMBER, in balks, varying from 12 inches square by 7 inches square, in lengths of 23 feet 6 inches, 29 feet 6 inches, 35 feet, 43 feet, and 45 feet, to be delivered free on their Works, Rochester. The specification and form of Tender may be had on application at the Office of the Company. The directors do not bind themselves to accept the lowest or any Tender.—By order,

W. SYMS, Secretary.

BARNSLEY LOCAL BOARD of HEALTH.—WATER WORKS DEPARTMENT.—CONTRACT No. 3.—To CONTRACTORS for RESERVOIRS, &c.—The Barnsley Local Board of Health are desirous to receive TENDERS for the formation of a large STORAGE RESERVOIR of about 17 acres in extent, to be situated immediately north-west, about two miles from the Town of Barnsley, on the West Riding and Lincolnshire Railway, in the West Riding of the county of York, together with West Moor Tunnel, Rising, Filter Beds, and other Contrivances, Pipes, and Appendages, may be inspected at the Office of Mr. RICHARDSON, Surveyor of the Local Board, St. Mary's-place, in Barnsley; and at the Office of Mr HAWKSLEY, Civil Engineer, 30, Great George-street, Westminster, on and after the 21st day of MARCH next, when the bills of quantities and other particulars may be obtained, on payment of two guineas for the same. Tenders are to be delivered at my Office on or before MONDAY, the 11th day of APRIL next, but the Local Board do not pledge themselves to accept the lowest or other Tender.

By order,

WM. H. PEACOCK, Clerk to the Local Board.

Barnsley, 4th March, 1864.

[For remainder of Contracts see next Page.

CONTRACTS.

TO CONTRACTORS and BUILDERS.—The Trustees of Watts's Charity at Rochester are desirous of receiving TENDERS for the CONSTRUCTION of certain ROADS and OTHER WORKS, in lieu of those on the New Line of Road, in the Ordnance Survey, in the parish of Chatham, Kent. Plans, sections, and specification of the proposed new Roads and Alterations, may be seen at the Office of Mr. Lemon, Solicitor, Rochester, on application on and after THURSDAY, the 7th instant, between the hours of TEN in the FORENOON and FOUR in the AFTERNOON. Tenders are to be sent in to the Office of Messrs. LEWIS & MARSH, High-street, Rochester, on or before SATURDAY, the 16th day of APRIL next, after which day no Tender will be received, sealed up, and addressed "To the Trustees of Watts's Charity at Rochester," and marked "Tender for Roads." The Trustees will not hold themselves bound to accept the lowest or any Tender. Any Contractor whose Tender will have to enter into and sign a contract, with two sufficient sureties as the Trustees may require, for the proper execution of the works. Such Contract is expected to be signed by the Trustees after the expiration of twenty days. By order of the Trustees.

Rochester, 18th March, 1864. J. LEWIS, Clerk.

TO SEWER PIPE MANUFACTURERS, &c.—The Local Board of Health for the District of Clayton-le-Moors, in the County Palatine of Lancaster, desire to receive TENDERS for the SUPPLY of SEWER PIPE, and SEWER TRAPS, together with the Bends, Junctions, and Special Pieces required for the Sewers and Drains for the Township of Clayton-le-Moors. Tenders may be sent, and Forms of Tender obtained, on application to Mr. RIDER'S Land Surveyor, Blackburn. Each Tender is required to be delivered "Tender for Sewer Pipes," addressed to MR. CLERK of the Local Board, Blackburn, Clerk to the said Board, not later than MONDAY, the 4th day of APRIL next.

Blackburn, March 22, 1864.

BLACKFRIARS BRIDGE. — Notice is hereby given, that the Bridge House Estate Committee will meet at the Guildhall, London, on FRIDAY, the 1st of APRIL next, to receive TENDERS for TAKING DOWN and REMOVING the present BRIDGE at Blackfriars, and ERECTING a NEW BRIDGE in lieu thereof. Tenders and the accompanying Plans, Sections, and Specifications, together with the Conditions on which the Works are to be executed, may be seen, and any information obtained, at the Office of the Engineer, JOSEPH CUBITT, Esq., No. 5, Great Winchester-street Buildings, London, until after MONDAY, the 21st MARCH instant. No Tenders will be received unless addressed to the Solicitor of the Bridge House Estate Committee, and sealed "Tender for New Bridge," and left at the Committee-room, Guildhall, London, before TWELVE o'clock, on FRIDAY, the 8th APRIL next, when the gentlemen whose Tenders may be selected to be in attendance at Guildhall on that day, at ONE o'clock precisely. The Committee do not hold themselves to accept the lowest or any Tender for the execution of the Works.

Guildhall, March 5, 1864. FERDINAND BRAND, Comptroller.

ST. PETER'S WHARF, WESTMINSTER, TO LET on LEASE—A Committee of the Governors of the Free Coal Trade will meet at the Hall of the Tallow Chandlers' Company, Westminster, on MONDAY, the 11th day of APRIL next, at TWELVE o'clock at noon, to receive TENDERS for the Letting or Taking on LEASE for the unexpired term of 21 years, from Michaelmas next, that WHARF and PREMISES, known as SAINT PETER'S WHARF, situate in MILLBANK-STREET, Westminster, at the corner of Abingdon-street, and in the occupation of Mr. Hebbs, and a Range of the Premises, in the tenure of Jennings, on the south of the said Wharf. Plans and Particulars of letting, and Particulars of the Agreement and Lease may be seen at the Office of Messrs. KEMPSON & TROLLOPE, solicitors, 19, Abingdon-street, and the Wharf and Premises to be viewed for letting, at the Office of Mr. W. B. GRIFFIN, Surveyor, No. 8, Parliament-street, Westminster. The Governors do not hold themselves to accept the highest or any Tender.

TO BRICKLAYERS.—Builders willing to CONTRACT for the ERECTION of a considerable extent of PARK WALLING, of Kent or Essex land Bricks, to be delivered, may hear particulars, on application to Messrs. LOCKWOOD & MAWSON, Architects, Bradford. Tenders for the Bricklayers are to be delivered, on or before MONDAY, APRIL 4, 1864.

CROYDON LOCAL BOARD of HEALTH. To CONTRACTORS and OTHERS.—Persons desirous of CONTRACTING with the Croydon Local Board of Health for the EXECUTION of a Length of MAIN SEWER, 3 feet by 2 feet, and the Works connected therewith, from the Borough of Croydon to Waddon, in the County of Surrey; and another length of such Sewer and Culvert, sewers, and the Construction of Filters and Engines for the Filtration of sewage; and also the Erection of a Filter-house and the laying down of land for the purposes of irrigation, at Penge, in the county of Kent, in accordance with the plans and specifications prepared by Mr. BALDWIN LATHAM, C.E., the Engineer to the said Croydon Local Board of Health, can inspect the plans, &c., at the Board Room of the said Local Board, at the Borough of Croydon, and obtain the last Printed Tender Form thereof. Tenders, duly signed by the Surveyor, are to be delivered at the Board Office, at the Town Hall, Croydon, on or before FOUR o'clock in the afternoon of TUESDAY, the 19th of APRIL next, when the Local Board of Health hereof will not hold themselves bound to accept the lowest or any Tender. By order of the Board.

April 2nd, 1864. HENRY RICHARDS, Clerk.

SECOND DURHAM MILITIA STORES, AT DURHAM.—The Magistrates for the County of Durham are desirous of receiving TENDERS for the completion of the requisite BUILDINGS and WORKS for the proposed STORE ROOMS and QUARTERS for a Second Durham Militia Regiment intended to be erected adjoining the present Militia Barracks at the village of Durham. The plans, sections, and specification of the proposed works may be inspected and perused at the Office of WILLIAM CROZIER, Esq., C.E., the County Architect, County Courts, Durham, on and after MONDAY next, the 28th instant. Tenders (properly filled up in every particular, and accompanied by a proposal for security), under seal and endorsed, "Tender for Second Durham Militia Stores," to be sent to deliver to the County Architect, not later than THURSDAY, the 7th APRIL next. The Magistrates do not pledge themselves to accept the lowest or any Tender. By order,

JOHN TIPLADY, Deputy Clerk of the Peace.

Durham, 23rd March, 1864.

TO PAVIORS and OTHERS.—The Commissioners of Sewers of the City of London, will meet in the Guildhall of the said city, on TUESDAY, the 12th APRIL next, at Half past TWELVE o'clock precisely, to receive TENDERS for RELAYING the CARRIAGE WAY PAVEMENT of the Minories, agreeably to a specification, which may be seen at this Office. Persons tendering are required to attend at the time and place aforesaid, when and where such Tenders will be publicly opened, and shall enter into and sign with the Contractor for the due performance of the Contract. The Commissioners do not hold themselves bound to accept the lowest Tender or any, to be received after TWELVE o'clock on the day of Meeting.

JOSEPH DAW, Principal Clerk.

Sewers' Office, Guildhall, 28th March, 1864.

TO BUILDERS.—Persons desirous of TENDERING for the EXECUTION of the various Works required in the ERECTION of a Second-quarter Battalion Drill Shed for Messrs. Tribe's Corps, at Lewes, can obtain plans and specifications at the Office of Mr. MONCKTON, Lewes, on MONDAY, the 4th APRIL, to SATURDAY, the 16th APRIL inclusive, between the hours of Ten and Two o'clock, at which latter time all Tenders must be delivered. The lowest Tender will not necessarily be accepted.

OLD SAINT PANCRAS ROAD, LONDON, N.W.

APPROVAL OF THE ROYAL VETERINARY COLLEGE.

THE MEDALS OF ENGLAND AND FRANCE,

And the Medals and High Recommendation of the Royal Agricultural Societies of England and Ireland.

SECURED BY EIGHT SEPARATE PATENTS. LATEST, 1863.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, with RACK & WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

THE HALTER BALL, ATTACHED BY A NEW IMPROVEMENT, WORKS NOISELESSLY, AND ALMOST WITHOUT FRICTION.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible,—advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

FIRE-PROOF CONSTRUCTION.—

FOX & BARRETT'S PATENT.

This improved system of fire proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one

Further information may be obtained of the Proprietor of the Patent,

MR. BARRETT,

12, YORK BUILDINGS, ADELPHI

LIGHTNING CONDUCTORS.

R. S. NEWALL & CO. Patentees of the COPPER ROPE LIGHTNING CONDUCTOR, supply the same, with the point and all staples, complete for fixing, at the following prices:—

CRYSTAL, BRONZED, AND ORMOLU CHANDELIERS, IMPROVED CRYSTAL STAR AND SUN LIGHTS,

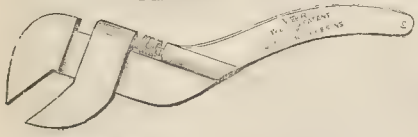
For Lighting and Ventilating Public and Private Buildings.

J. D & SONS beg most respectfully to inform Architects and the Trade, that having been solicited to open a West-end Branch, they have taken the DUDLEY GALLERY, EGYPTIAN HALL, PICCADILLY, and at an enormous outlay they have made it replete with every description of Lighting novelties, including REGISTERED DESIGNS of MEDIÆVAL GAS FITTINGS, CRYSTAL, BRONZED, ORMOLU, and ELECTRO PLATED Chandeliers, Brackets, Vestibule Lights, Bronzed and Iron Standards

SPECIAL DESIGNS PREPARED in perfect ACCORDANCE WITH Architectural Arrangements. Estimates furnished FOR THE LIGHTING and Fitting up of Theatres, Music-halls, and Public or Private Buildings with Gas, &c.

The usual trade discount allowed, as at their

MANUFACTORY and CITY SHOW ROOMS, 147, HOUNDSDITCH, CITY.



BY HER MAJESTY'S ROYAL LETTERS PATENT.

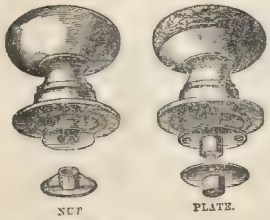
WILSON'S DOUBLE-ACTION SCREW SPANNER,

MANUFACTURED BY

JAMES HEELEY & SONS,

Mount-street, Birmingham.

The superiority of this Spanner consists in its novel and rapid mode of adjustment by a double action screw, and its new and convenient arrangement of curved handle and oblique jaws, which, combined with its superior strength and excellent workmanship, render it by far the best and handiest tool of its class hitherto produced. It is being extensively used by Engineers, Manufacturers, Machinists, and Railway and Steamship Companies, and can be had of all respectable Ironmongers.



SIMPLICITY, UTILITY, ECONOMY, AND DURABILITY.

THOMAS PUGH & CO.'S NEW PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE.

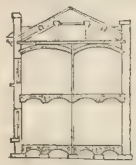
J. B. SCAMMELL & CO. (late Thomas Pugh & Co.)

WHOLESALE IRONMONGERS,

13, KING STREET, SNOW HILL, LONDON.

NUT PLATE.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in Public and Private Buildings, in Her Majesty's Patronage and Empire Abroad, and is universally acknowledged without one single failure. It is applicable to all Locks and Latches, both Rim and Mortise, and effects a most secure fastening, without any screw in the neck of the Knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture



New rich Designs in Glass, China, Brass, Bronzed, Gilt, Carved Woods, Inlaid, &c. &c. or to any Design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of Locks, Latches, Brass Furniture, and Ironmongery, required for Buildings, of the best quality manufactured, at the Lowest wholesale prices.

, Illustrations and Particulars sent on application.

WAREHOUSES FOR NAILS, PIPES, GUTTERS, &c. IN ST. JOHN'S COURT.

THE DENNETT ARCH.

Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G Scott, esq. for the New Foreign Offices. used in any form of work, curved, flat, turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness

Address to the Patentees,—A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL. "I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical occasion to test its efficiency as against fire, I can bear witness to its strength, and I think for economies of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost who ly free from lateral pressure

GEO GILBERT SCOTT, 21, Spring Gardens London."

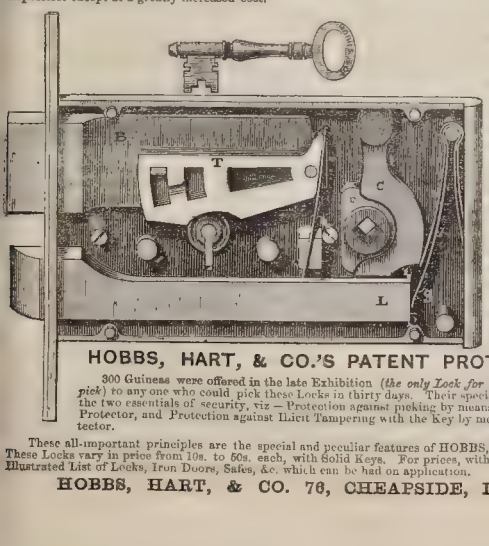
This Stove, also

CUNDY'S PATENT BRICK OVEN

Double Fall-down Bar KITCHEN-RANGE, and PATENT BRICK OVEN, Semi-close Range, also CUNDY'S Patent Original FIRE-BRICK Warm Air Ventilating STOVE, suitable for CHURCHES, HALLS, SCHOOLS, and STAIRCASES, can be seen in operation daily, at the SHOW-ROOMS of the Manufacturer, Wm. ADDIS, 6, 7, & 15, Leicester-street, Leicester-square, London.



WHEN CLOSED FOR BAKING.

A Prospectus, with full description and price of the above, will be sent per Post on application.

HOBBS, HART, & CO.'S

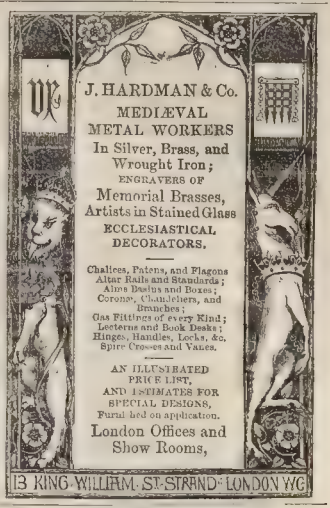
MACHINE-MADE LOCKS AND STREET-DOOR LATCHES.

These Locks are recommended for all purposes requiring good security combined with economy of price and durability of wear, as by means of machinery a faultless accuracy is arrived at, which by hand labour would be impossible except at a greatly increased cost.

Architects and Engineers are requested to notice that the security of these Locks consists in a series of Levers, that have to be raised to unequal positions by the bits of the key before the bolt can pass. These will bear comparison with those at treble their cost.

These Locks are made with from Two to Five Levers, and can also be made in suits to differ with Master Keys to pass.

The retail prices of Locks for Cabinet purposes are from 2s. to 4s. each; for Room Doors, 4s. to 9s. 6d. each; Street Door Latches, 7s. 6d. to 18s. each.



This Illustration represents the Two-bolt Four-lever Mortise, with Hobbs & Co.'s Patent Follower, price 8s.

HOBBS, HART, & CO.'S PATENT PROTECTOR LOCKS.

300 Guineas were offered in the late Exhibition (*the only Lock for which a Premium was offered to pick*) to any one who could pick these Locks in thirty days. Their speciality consists in their combining the two essentials of security, viz.—Protection against picking by means of their Patent Moveable Lever Protector, and Protection against Illicit Tampering with the Key by means of their Patent Nozzle Protector.

These all-important principles are the special and peculiar features of HOBBS, HART, & CO.'S Patent Locks These Locks vary in price from 10s. to 50s. each, with Solid Keys. For prices, with Changeable Keys, see 16-paged Illustrated List of Locks, Iron Doors, Safes, &c. which can be had on application.

SMOKY CHIMNEYS.
S. DEACON
Respectfully invites the attention of Architects Builders, &c. to his
PATENT LOUVRE CHIMNEY CAP,
which has been in use some time with perfect success, many curing chimneys where other caps have been of no avail.
The advantages attending this Cap are—it can be thoroughly cleaned by the machine when the chimney is swept, the brush being able to pass through the Cap without the liability of misplacing it, an increased up current, and the impossibility of a down one.
Prospectus, with testimonials, forwarded on receipt of Postage Stamp, by
S. DEACON,
59, ALMA STREET, HOXTON, N.
MANUFACTORY:
HEMSWORTH STREET, SAINT JOHN'S ROAD, HOXTON, LONDON, N.

SMOKY CHIMNEYS.
WOOD'S
PATENT CHIMNEY-TOP
Is simple in construction and certain in effect.
It has a good shape, is durable, and easily swept by the sweeps' machine.

BUNNETT & CO.

PRIZE MEDAL, GREAT EXHIBITION
FOR
REVOLVING
IRON
SHUTTERS.

No. 1.—Patent, Bank Quality, with best Worm and Wheel Gearing, 6*s.* per foot.

No. 2.—Patent, for Shops and Offices, with best Chain Gearing, 5*s.* per foot.

No. 3.—Patent, for Private Houses, without Gearing, raised and lowered with Balance Weights, 3*s.* 6*d.* per foot.

BUNNETT & CO. invite the attention of Architects and Builders to their recent Improvements in LIGHT REVOLVING IRON SHUTTERS for the WINDOWS of PRIVATE HOUSES, raised and lowered with graduated balance weights, without any gearing.

A matured experience, extending over twenty-five years, has convinced the Patentees that *no permanent dependence can be placed in any other*

SYSTEM OF

SELF-COILING SHUTTERS.

BUNNETT & CO.'s
Widely-known and well-appreciated
BANK SHUTTER

requires no comment, as it is in use in a large majority of the Banking Establishments, Goldsmiths' Shops, and Public Offices of the United Kingdom and the British Colonies; but the Patentees wish to make it known that they have recently completed extensive Additions to their

WORKS AT DEPTFORD,

and have erected new and most powerful Machinery with the view of meeting the largely-increasing demand for the

REVOLVING IRON SHUTTER,
With all necessary Despatch.

LONDON OFFICE,
17, QUEEN STREET, CITY;
GLASGOW OFFICE,
199, BUCHANAN STREET.

THE GREAT FIRE IN THE CITY.—"A closer examination yesterday of the track of the recent fire in Wood-street, shows in a striking manner how much it was confined to a class of buildings the interior arrangements and means of communication of which appear to have been made in defiance or ignorance of the principles which now regulate such matters, under the operation of the Metropolitan Building Act. The warehouses and offices which have perished seem to have been separated from each other by thin lath and plaster partitions for the most part, and only in one instance was there an iron door between one part of the interior of the same building and another, such as is now commonly used and made unpretty, indeed, in the construction of warehouses, as an invaluable means of shutting off communication in case of fire. That iron door, too, which remains uninjured, would have been completely effectual in arresting the flames in that direction, had they not penetrated by a vulnerable point into the part of the building which it protected.

THE USE OF IRON FOR SAFETY AGAINST FIRE was most conclusively proved by a very remarkable circumstance. The large and handsome warehouses of Messrs. J. & R. Morley, situate at the corner of Gresham and Wood Streets, overlooked by a large window on the ground floor at the back the little court in which the fire originated, and to which it was at first confined.

THIS LARGE WINDOW WAS PROTECTED ON THE OUTSIDE BY A REVOLVING IRON SHUTTER, AND THAT MORE AGAINST ROBBERY THAN FIRE.

On this occasion for some time the flames played fiercely, but harmlessly, about the outside of the window so guarded by the iron shutter. Had they once entered Messrs. Morley's premises at that point, the stock stored inside, and estimated at from 250,000*l.* to 300,000*l.*, would inevitably have been destroyed, if, indeed, the devastation would have ended in that one vast pile of building. Upon such a slender condition of safety did property almost fabulous in value, and belonging to a single firm, depend in this case."—*Times*, 2nd December, 1862.

THE REVOLVING IRON SHUTTER THAT ARRESTED THIS FIRE WAS MANUFACTURED IN 1849, BY
BUNNETT & CO., Patentees,
London & Glasgow.

WINDOW BLINDS.
E. ADKINS,
HIGH STREET, ST. JOHN'S WOOD,
REGENT'S PARK, N.W.
OUTSIDE SUN-SHADE,
AND
SPRING ROLLER MAKER
TO THE TRADE.
Patent Self-adjusting Venetian Blinds, requiring no Fastenings for the Cords.
Illustrated List of Prices on receipt of One Postage Stamp.

PATENT SASH-LINES.
H. & J. DOVE, 31, Ludgate-hill, London, E.C. beg to call the attention of Builders and the Trade generally to their low Price List for every quality of SASH-LINES, which will be sent on application, or a Sample Order will receive immediate attention. In all cases where the parties are not known, a reference in London is indispensable.—Established A.D. 1737.

WINDOW-BLIND MATERIALS.
H. & J. DOVE, 31, Ludgate-hill, London, E.C. Supply the Trade with every description of MATERIAL for inside and outside Window-Blinds; comprising Sun-blind Ticks; Linen Hollands; Buff, Green, and White Unions; Green, Crimson, and Blue Tammies; Fancy Printed Blinds, Cords, Tassels, &c.; also Webs and Lines for Venetian Blinds.—Samples and Price Lists sent on application.

WINDOW BLINDS.
VENETIANS, SPANISH, FLORENTINE, Patent "Helio-Scene," Wire, Zinc, Awnings, Door-blinds, Spring-rollers, Blind Ticks, Webs, and every article in the blind trade, manufactured expressly for the trade, on liberal terms.

A LARGE ASSORTMENT of STATUARY & COLOURED MARBLES, also ENAMELLED SLATE, and STONE CHIMNEYPIECES, at Prices to command their Orders.

CARVED TRUSS STATUARY MARBLE CHIMNEYPIECE, FROM £6. AND UPWARDS.

ESTIMATES WILL MEET WITH PROMPT ATTENTION.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

JAMES W. TYLER, CONTRACTOR FOR DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFING,

ON IMPROVED PRINCIPLES.

12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

Estimates furnished for every description of Zinc Roofing and Guttering, inclusive or exclusive of Timber or Iron Framing, in all parts of England.

Having for several years been actively employed in laying DEVAUX'S THICK ROOFING ZINC (the purest extant) upon the new principles introduced by Mr. Edmeston, Mr. TYLER can refer with confidence to work done as the best recommendation.

Good Zinc badly laid will spoil a roof, for there is much more importance in the mode of laying than is yet generally known, and parties who will intrust their work to Mr. TYLER will find that it is properly laid, as it is his only study, indeed to, and at no extra cost.

The Zinc tops made as slate or nothing as lead, if the woodwork is arranged according to Mr. TYLER'S directions.

THE LAND SECURITIES COMPANY

(Limited)
Capital, 2,000,000.
Debenture

His Grace the Duke of Marlborough, President.

The Directors of the International Financial Society (Limited), acting as a Finance Committee.

John Ramsden, esq. M.P.	William Durham, esq.

& SONS, 26 and 27, Berners-street, are prepared to supply Machine-made Patented SOLID PARQUET FLOORS 25 per cent. cheaper than they have been yet offered. Illustrated Catalogues and estimates free.

The Builder.

VOL. XXII.—No. 1104.

The Evidence on the Sheffield Reservoir Failure.

AFTER a very hurried investigation, the Jury has returned a verdict to exonerate from a criminal charge all parties concerned in the Bradfield Reservoir business, but accompanied by the following censure:—"In our opinion there has not been that engineering skill and that attention to the construction of the works which their magnitude and importance demanded." There was also the following recommendation, which we most cordially endorse:—"That in our opinion the Legislature ought to take such action as will result in Governmental inspection of all works of this character, and that such inspection should be *frequent, regular,* and *sufficient.*"

From the evidence it appears that Mr. John T. Leather, Leven-thorpe, Leeds, was the consulting engineer to the company: he prepared the plans and pecifications in the year 1858, and made a eneral examination of the country to see if he ould obtain water. The length of the embank-ent of the reservoir was 418 yards; thickness t base, 500 feet; width at top, 12 feet;* inner id outer slope, 2½ to 1; greatest height, 95 feet. 'uddle wall, 4 feet thick at top, getting wider y 1½ inch at every foot in depth, making 16 feet t base: there are 60 feet of puddle below the rface of the land, making the total depth of uddle 155 feet.

The area was 78 acres, contents of reservoir 14 millions of cubic feet, and the area of the athering ground 4,200 acres. There are two 8-inch pipes under the embankment; 55 or 6 lengths of pipe, 9 feet each, laid obliquely rough the bank, with sockets, and made with ead in the usual way: *they are laid 9 feet elow the surface of the ground,* in clay puddle 8 inches thick, and puddled round. The sluice-alves are at the lower end of the pipes, out-de the embankment. He says the original lan was not carried out, the strata being ound to be disturbed: "I examined the resent site before the embankment was com-enced." Is it meant that borings were taken f the present site? We should have thought hat even in the absence of borings, the nking of the puddle-trench, 60 feet deep and 5 feet wide, would have afforded an insight nto the sub-strata under the seat of the bank; nd as no defect was discovered, we may fairly onclude, with that *thorough* examination, the heory of the landslip suggested, now, is un-enable. Besides, if a landslip had taken place, it would show itself on the surface and in the embankment now. He saw the puddle-trench twice during its execution in 1861 and 1863. Of course, it is well known that puddling requires constant examination: each course, as laid on, should be properly inspected, but that is not the duty of a consulting engineer.

To form the bank, he said he used "rock, clay, shale, and soil." Clay and shale carefully laid on, in shallow lifts, and the large lumps broken, would form a sound and durable embankment; but stone and soil are most objectionable: stone would render the bank open and porous, and soil is easily compressed, and would be more usefully applied to the outer slope. The pipes, it appeared, were placed in the solid ground 9 feet below the seat of the embankment, and puddled round. It might be thought, if this were well done, no settlement could take place, as it is well known that, if puddle be allowed time to harden and consolidate, it will bear an enormous pressure: at many of our retaining walls of reservoirs, harbours, &c., puddle is laid underneath their bases, and we hear nothing of failures. It is well known to canal engineers, that a cubic yard of clay, cut from the solid, will not make a cubic yard of puddle, properly wrought, and this may be further hardened and consolidated by using a little fine gravel mixed with it. "The valves are at the lower end of the pipes, outside the embankment." That was a great mistake, as, in the event of failure or defect in the valves or pipes, there would be no means of shutting off the water. In works of this character, every precaution that the skill of the engineer can devise should be used, and the public safety placed beyond doubt.

"If the pipes burst they would have to be reached by excavation,"—a clumsy arrangement, and unworthy of the science of the age: surely strong culverts or subways, with manholes at intervals, could be used, the pipes being carried—not through the heaviest part of the embankment, but—round the ends in the solid ground. "The pipes are made double the usual strength:" they are said to weigh 18 cwt. each. Their thickness must therefore be about 1⅛ inch, and a well-made pipe of that strength would withstand an hydraulic pressure of a head of water equal to at least 700 feet: the pressure in this case was only 90 feet; indeed, less than 90 feet when the accident happened. We are very much disposed to look to some other cause for the accident than the failure of the pipes, from either internal pressure or external compression.

"I should think there could not be any unequal pressure on the pipes from the embankment: being laid in the solid ground the weight above could do no harm, the pipes could not be raised with pressure at the joints." The chief risk the pipes would run would be in crossing the puddle; and, if that was solidly and compactly made, as we before stated, we do not think that danger could be apprehended from that cause. Pipes and even culverts have been, and can be, run under heavy embankments of masonry, brickwork, and concrete with success, and we do not see the great engineering difficulty in this case.

"The Company have other dams (Rivelin, &c.) similar to this." We are glad to see that the Company are alive to their risks and responsibilities, as they have called Messrs. Bateman & Hawksley to report on them, and those gentlemen have expressed approval of their strength and efficiency: of these we may have something to say hereafter.

"The pipes were severely tested before they were put down, and it was almost impossible for them to be defective or yield at the joints. He never saw them do so in the streets," although under 500 feet head of pressure. We presume they were subject to the usual hydrostatic test, as no water-pipe ought to be used until it has undergone that process, and under competent inspection. We know carelessness is often shown, and the result is calamity.

"The pipes would discharge 10,000 cubic feet per minute, and it would take eight days to empty the reservoir." We should like to know the effect that a heavy fall of rain would produce over this large drainage area. With 1 inch fall of rain per hour (no uncommon thing on this range of high lands), when the stratum of earth was thoroughly saturated and surcharged with water, the produce would be 15,609,000 cubic feet. The 18-inch pipe would discharge 600,000 cubic feet per hour when the reservoir was full, and the weir (60 feet long), with a 4-feet depth of water over it, would discharge 6,149,280 cubic feet, making a total of about 7,049, 280 cubic feet; so the probability might be that almost double the quantity of water the pipes and weir could take away might be brought in a short period upon them, with no other provision made to let it off.

There ought to have been a by-wash constructed that could be used for the purpose of diverting and taking away any storm water, which is generally surcharged with extraneous matter,—in fact, one that could regulate effectually the supply of water to the reservoir. Mr. Leather says, he does "not think more means of outlet were required, as he devised a scheme which he thought sufficient." We should suppose the above calculations are conclusive to the contrary, as every provision should be made for such contingencies. "The strength of the bank is generally considered to be ten times the pressure against it." If the weight of the 90-feet head of water at the centre of pressure on the embankment is calculated for 300 feet in length, the extent of the chasm, and the resisting weight of the bank above that point, they bear a proportion of a little more than one and a half times: the weight of water being about 90,610 tons, the embankment 138,214 tons.

"I have had no instance of pipes giving way in my embankments." With that we express no surprise, because, if ordinary care and precaution are taken, and pipes of proper strength used, there is no fear of such failures. Telford and other engineers have adopted the practice, and extensive works of half a century old testify to their efficiency. "The embankment is merely to support the puddle-wall, which is the matter to keep out the water." To this opinion we are diametrically opposed: the embankment is not intended to support the puddle-wall only, but also the weight and hydrostatic pressure of the water. As well might it be argued that only rails and sleepers are intended to support the traffic of railways, and that embankments could be dispensed with. It appears to us that this unhappy fallacy has been at the root of all the mischief. *They were making a bank to support the puddle, not the water,* -therefore loose, porous, non-cohesive material, carelessly tipped into an embankment, would do; forgetting that the bank had to withstand an immense pressure of water. As well might we hope to make ropes of sand, or build castles on a quicksand.

"I can form no opinion as to the cause of the failure. There is a possibility of a landslip under the base of the embankment; but I do not think the pipes are broken." We should have thought, as we before stated, that after excavating so deep for the puddle, any fault or defect in the strata would have been discovered.

"The geological formation is just at the outcrop of the coal measure, and the commencement of the millstone grit," and the rocky strata inside the reservoir was bared to form the embankment. We suppose the witness to be the same Mr. John T. Leather who reported on the failure of the Victoria reservoir, Halifax, in a letter, June 15, 1850, a copy of which is now lying before us, addressed to the Town Clerk, Halifax. "The defects in the reservoir appear

* Holmfirth reservoir has a 16 feet top; inner slope to 1, outer 2 to 1.

to me to arise principally from two causes, viz. first, the loose and careless manner in which the irregularities in the bed of the reservoir have been filled in and levelled for the reception of the puddle; and second, the insufficiency of the puddle both in quantity and quality. These are sufficient of themselves to account for the incapability of the reservoir to hold water. To obviate these defects, I would recommend the whole of the bottom lining to be turned over, taking care the first course is well rammed, and adding as much new puddle as will effect a thickness of 2 feet, taking care that it is well worked by men who are experienced."

If this system and these recommendations had been carried out at Bradfield, the embankment would have been much stronger than it was left.

We have now gone through Mr. Leather's evidence, and we are forced to think that it is not so full and complete as it ought to have been. It is very desirable that failures like this should be thoroughly investigated, and the causes clearly shown for the benefit of the future.

We now proceed to look at the salient points of the evidence of Mr. Gunson, the resident engineer. He says, "We made the puddle-trench deeper than was intended, as there was a great flow of water from the sides, and we had to fit up engines of 20-horse power to pump the water, to enable the work to proceed, and this was continued for two years." This difficulty with the water ought to have made them doubly careful in the execution of the works. "The puddle-trench was very satisfactory in the bed of the river." No defects, it appears, in the strata—no probability of landslips. "The pipe-trench we dug out 9 to 10 feet deep, and perhaps as many wide." Why it was made so wide is not obvious, because it could only be required the width of the pipes and puddle, as it is very undesirable to have the strata underneath the seat of the embankment disturbed; the more compact and incompressible it is the better. "We put the earth into the bank with *barrows*, carts, and *waggons*, and we put 24,000 cubic yards of rubble stone at the outer slope, forming an embankment in itself of 50 feet high." We have no hesitation in saying that an embankment composed of such unsuitable, heterogeneous, and non-cohesive materials was wholly unfitted for a reservoir. This system adopted at the Agden reservoir should be immediately changed, unless we are to have another terrible catastrophe to shock humanity.* We have before us a specification for a reservoir embankment prepared at the instance of the late Mr. Telford. It is as follows: — "The inner slope of the embankment, for 4 feet in thickness of clay or marl, to be cut into pieces not exceeding 3 inches in diameter, and to be laid on in courses not exceeding 12 inches in thickness, and to be well rammed. When clay or marl is used for the other part of the embankment, to be carefully chopped into pieces, not exceeding 3 inches. The embankment is to be formed in regular lifts or layers of not more than 3 feet in thickness, each lift to extend the full width and length of the bank, before another is commenced." This was in good clay; no large lumps of clay, rough stones, or soil were used, except soil to cover the outer slope. And to prevent the possibility of slips, slopes of sufficient inclination were made, at least double that of the angle of repose.

Mr. Gunson feared the puddle wall would sink across the trench, and the weight of the embankment break the pipe; but if the puddle had been well made, and allowed to become of sufficient hardness, as before stated, we do not think such a circumstance could arise; and to lessen the risk, as he thought, he extended the puddle to 100 feet on each side of the puddle wall. "We made an arrangement to prevent water creeping along the pipes." He thought it effectual, as the sockets formed collars, and we think in a length of 500 feet of pipe, if they were laid on the solid, well puddled, and the puddle well punned underneath the collars, no water could percolate through. If the same pains had been taken to prevent water penetrating the inner slope of the embankment, and the bank had been of sufficient strength, we should probably never have heard of this serious accident.

"The pressure on the pipes in the town was five times what it was at the reservoir, and I have known the lead forced out of the joints." To remedy this, he had the ends that fitted in sockets cast a little larger, so as to dovetail in, and prevent the pipe and head from drawing at the joint. This is a good arrangement, and adopted generally for pipes placed under high-pressure. "The rain-fall in 1859 was 46 inches; 1860, 44 inches; 1861, 39 inches nearly; 1862, 40 inches. There is half a cubic foot gathered from each 1,000 acres in ordinary seasons, and the greatest flow over the gauge (18 feet wide) was 60 inches; the greatest in August, 1856, when 8·75 inches fell,* giving a maximum flow of 150 cubic feet per second per 1,000 acres," or 39,000 cubic feet per minute, or 2,340,000 cubic feet per hour from over the whole area, less than $\frac{1}{4}$ of an inch; the usual calculations are $\frac{1}{4}$ and even $\frac{3}{8}$ of the rain-fall, the ordinary flow off gathering grounds, particularly off those on this range of mountainous country.

"On the south side the dam we had an artificial cutting to divert the stream during the construction of the reservoir." That channel we could not see a vestige of; and we presumed that the water that had accumulated during the execution of the works had been passed through an opening left in the embankment. If such had been the case, it would have endangered it; many sea embankments have failed from too hastily closing in such openings. But if a bywash had been made to facilitate the execution of the works, why was it not left, as a safety-valve, for the permanent work? But, we presume, they thought the works so perfect, that they did not need it. "I don't consider it a hazardous proceeding to bare 10 acres of rock inside the reservoir." Mr. Leather, as we have elsewhere stated, thought differently at Halifax. "I don't believe that a single drop of water came through the bank; the water that came through was quite clear, while that in the reservoir was turbid." So it is evident the bank could not have been undermined, from fissures occasioned by landslips, or breakages of pipes in the base of the embankment, as it was so porous, full of large stones; but the presumption is the toppling over of the crest of the bank, as described so graphically by the press, was the first intimation of the failure.

"To guard against fractures in the pipes, they were made double the usual strength," and every precaution was taken in laying them; therefore the inference is, that the cause of failure does not lie there.

"I was on the spot on the 11th of March, which was a stormy day, to see the effect of a storm on the newly-filled reservoir and works. The water was only from 3 inches to 6 inches below the weir;" therefore the full pressure, or nearly so, was on the embankment,—suddenly placed on, and the result was immediate failure; and the deduction to be drawn therefrom is the one that we have advanced, just as a breaking weight suddenly placed on would fracture a girder. Landslips, pipe fractures, leakages, &c., would have been more gradual in their operations, and would have shown themselves in some way or other, and not occur so suddenly as in this case.

"I thought that the winds and waves playing on the embankment *had loosened the material of the inner slope; and, if so, the puddle wall would lean forwards into the reservoir, and thus cause the fissure below.* This was the theory set up by Thornton and others, as well as myself;" and this, we have no doubt, was one of the main causes of this lamentable affair. In answer to a question, "What time would it take to bare the pipes?" he said from six to eight months, and it would cost from 2,000*l.* to 3,000*l.* If we had such an occurrence in our neighbourhood, we should send for a good sewer contractor, to bring suitable plant, and a gang of expert navvies; and, in as many days as he named months, we venture to say we should have the pipes laid bare. "Where there is a will there is a way;" and such statements as these are not very creditable to the age in which we live.

"We tried to blast away the weir, but failed (the neck of the weir is 24 feet, and the length round the mouth, 60 feet), and while we were doing so the water rapidly subsided; it came over the top of the embankment." The pipes were then open, as he went to look how they were running below the valve-house. If there had been a fracture, there would probably have been a stoppage, and the water would have found vent some other way. The top gave way with the pressure, and it broke away with the scour and current of the water, crash following crash in quick succession, until the whole chasm in the bank gave free vent to the overwhelming and surging waters.

On the 10th of March the water in the reservoir was 2 feet 3 inches below the weir, and on the 11th it was 1 foot 3 inches, showing that it had risen a foot in one day; and it had, therefore, accumulated in that period 3,397,680 cubic feet, flowing off 4,300 acres, nearly 800 cubic feet per acre, rather more than $\frac{1}{4}$ of a foot ($4\frac{32}{75}$ inches), instead of 1-6th, as stated by Mr. Gunston, as the maximum rain-fall. The rain-fall that week was not very heavy; March 10th, 0·08 inches; March 11th, 0·06 inches; the former day fine, the latter showery, sunshine, and wind.

"The sluice-valves were raised about half-past 7 p.m.," so that before the accident occurred, five hours had elapsed, and if the pipes would discharge 10,000 cubic feet per minute (we believe they would do rather more), three million cubic feet had been discharged by means of the pipes, or nearly the accumulations of the past day. So if other means for discharge had been devised, such pipes, for instance, as we believe are in operation in the Manchester reservoirs,* the head of water might have been rapidly lowered, and probably this sweeping devastation prevented.

In cross examination he said, "that after this accident I should prepare means to let off larger quantities of water." After the steed is stolen, the stable is to be locked; but we should hope that in any future works of the kind carried out in this country, such precautions will be taken, and such skill exercised, as will place failure beyond the possibility of occurrence, so far as human means will avail. We are quite aware that engineering science has arrived at a point of excellence that this country has not hitherto possessed; and that for solitary failures, we must not condemn the whole profession. But it so happens in this country, as with our brethren across the Atlantic, "round men sometimes get into square holes, and square men into round holes." Unhappily for the country, we buy our experience at a very dear rate: such failures as this are very fatal, and very costly experiments in hydraulics.

We shall return to this subject, and analyze the evidence of Mr. Jackson and Mr. Robert Rawlinson, sent by Government to assist in the investigation. Some extraordinary revelations were made as to serious departures from the specification; and we hear it rumoured that attempts are being made to have the question opened again before a court of inquiry, as it is said some strong and important evidence as to the nature and cause of the accident was considered inadmissible on the late occasion.

* The work has been stopped, on a report from Mr. Rawlinson, as mentioned on another page.

* Greatest fall in one day near Sheffield, August 8th, 1859, 2·61 inches; ditto ditto, August 8th, 1856, 3·12.—Observation by D. Doncaster, jun., Broomhall.

* Two 4 feet in diameter, areas seven times more.

GREAT CALAMITIES.

THE INUNDATION AT SHEFFIELD.

When a small calamity occurs, we generally regard it as an event in the natural procedure of the world,—something which foresight and intelligence might possibly have averted, or may prevent from recurring. If a building fall through slovenly or faulty construction, we usually look to the bad construction as the cause; and agree that such incidents may be made less frequent if we use more care and resort to a better mode of building. Or if the inhabitants of a certain district are attacked by disease from the malaria of stagnant waters, we, of course, regard the malaria as the cause, and seek to avoid the evil in future, by an efficient system of drainage. But when a calamity on an extensive scale unhappily takes place, such as that which occurred so lately at Sheffield, by the failure of the Bradfield reservoir, and which, independently of the destruction to property, swept nearly 300 souls into the ocean of eternity, the general inclination seems to be to regard it with the wonderment which any grand event would excite. The falling of the calamity upon innocent classes leads to a searching inquiry, yet the cause of the failure remains undiscovered, the wonderment ceases, society is content to dream; and so calamities are suffered to pass without a true reading, and also without a true improvement.

The calamity referred to might certainly have been averted by means within the scope of human power. The Bradfield reservoir failed; and we have suffered simply from defective knowledge—that endless cause of inconvenience and trouble to man—in consequence of our arrangements being imperfect, or through a want of precaution and providence. Nature exacts a dreadful penalty for the neglect or transgression of her laws, and the penal cha-

racter of calamities is, perhaps, their most striking aspect. The attentive man watches it as a pupil watches for the meaning of a teacher, with the design of profiting by it. As a chastisement for error, he yields to it as no more than just, and turns contritely to the work which is before him for the advantage of the future.

It is particularly interesting to observe how nature punishes the *moral errors* on the part of great societies. Pestilence is usually bred among the masses of the wretched. From the hovels of the poor it spreads to the affluent, and even attacks royalty in the palace: many perish who have not failed to any signal extent in observing the rules of health; but while this has been attended to, social mischiefs have been left unremedied; hence evil has arisen. It is a nice and difficult question, but we must all admit that something is wanting in our social arrangements with regard to the less fortunate of the community. The system of individual interests is so far well when unaccompanied by jealous, selfish, and illiberal feelings: no doubt, independence is a noble word, and gives its possessor the means of displaying one of the brightest features of human character; and those who possess it are bound to use it to alleviate the misery of their less fortunate brethren. The laws of true society demand great mutual care and helpfulness, supplementary to self-helpfulness, yet not to supersede it.

If this be true, all great concentrations of misery are evils for which society is chargeable, and for which pestilence, crime, and every other resultant evil is only nature's appointed punishment. Let us so contemplate the public calamities of our time, and so resign ourselves to the penalties they impose; yet, not for one moment forget the duties which they place before us. May the lesson we have just received at Sheffield teach each of us that ignorance, selfishness, or perverseness will be certain to bring down on us a just chastisement; that defective knowledge, want of precaution and providence, will assuredly, if continued, exact a heavy penalty. It is true no one is infallible, but he will be nearest safety who, as science teaches, allows a right margin to balance against casualties.

VANDYCK IN ENGLAND.

"Rare artisan, whose pencil moves,
Not our delights alone, but loves!
From thy shop of Beauty we
Slaves return that enter'd free."
Waller to Vandyck, circ. 1638.

"Painters of history make the dead live, but do not live themselves till they are dead: I paint the living and they make me live."—*Sir Godfrey Kneller, circ.* 1712.

We now quit men in armour and garter robes, squerries, and pages, for white, blue, and yellow satins, pearl necklaces, vases of flowers, and fountains of water. We are now in the land of ringlets, fair faces, delicate hands, and delicious eyes. We have seen King Charles and his court as Vandyck saw them in the Blackfriars; we have now to take the court of Henrietta Maria to the easel of the king's favourite painter,—to that "shop of Beauty," as Waller calls it, where immortality of face was to be obtained as long as colours and canvas will endure.

It has been well observed by one of our earliest writers upon art,* that Vandyck was the first painter who put ladies' dresses into careless romances:—

"Hair loosely flowing, robes as free."

He certainly took the buckram and starch out of female costume; scorning to paint embroidery like Vansomer and Mytens, he gave up matted floors and thick variegated carpets, introduced silks and satins, and laid the foundation of a new school of female portrait painting.

Critics seem to agree that his female portraits are inferior to his male. This is not altogether true. In some cases he is fully up to every excellence he has caught in his male portraits. Two at least of his Henrietta Marias are perfection of beauty most perfectly rendered.

One duchess certainly sat to him, for dukes and duchesses were rare in England when Vandyck was with us. Vandyck's sitter was Mary Villiers, Duchess of Richmond and Lenox, wife of James Stuart, Duke of Richmond and Lenox. The duke was her second husband; her first was Charles Lord Herbert (died 1635), of the Pembroke and Montgomery blood. In the Vandyck room at Windsor is an exquisite full-length of her in white satin, with the attributes of St. Agnes, for she was gentler than Queen Christina, and did not want a canvas lion by her side. There is another portrait of her from the same inimitable hand at Hamilton Palace, in Scotland,—a full-length in white, attended by a Cupid, with an arrow in his hand. There is a third at Blenheim,—a female page presenting her gloves; and (marvellous workman was Sir Anthony), a fourth with Mrs. Gibson, the dwarf, by her side, at Lord Pembroke's, at Wilton. The picture at Burleigh (the Marquis of Exeter's), is "a good copy," by Ashfield.* The Windsor and Hamilton Palace pictures are in Sir Anthony's best manner, of great elegance, and carefully executed in a clear tone. Of this handsome woman read the pleasant prattling account which her mother —a Manners-Rutland — gives of her when a child:—

"She is very well, I thank God; and when she is set to her feet, and held by her sleeves, she will go sortly, but stamp and set one foot afore another very fast, but I think she will run before she can go. She loves dancing extremely; and when the saraband is playèd she will get her thumb and her finger together, offering to snap; and then, when 'Tom Duff' is sung, then she will shake her apron; and when she hears the tune of the clapping dance my Lady Frances Herbert taught the Prince, she will clap both her hands together and on her breast; and she can tell the tunes as well as any of us can, and as they change the tunes she will change her dancing. I would you were here but to see her, for you would take much delight in her. Now she is so full of pretty play and tricks; and she has gotten a trick that, when they dance her, she will cry 'Hah! hah!' and Nicholas will dance with his legs, and she will imitate him as well as she can. She will be excellent at a heat, for if one lay her down she will kick her legs over her head; but when she is older I hope she will be more modest. Everybody says she grows every day more like you."†

This pleasant girl lived to wed a third husband, the Hon. Thomas Howard (died 1678), brother of the first Earl of Carlisle, of the Howard family. Vandyck's Duchess, as St. Agnes, survived three husbands and an only son, and died in 1685.

Horace Walpole had at Strawberry Hill a full length of Frances Brydges, second wife of Thomas Cecil, first Earl of Exeter. Our great letter-writer bought it at Richardson the painter's sale. This lady was a daughter of Brydges, Baron Chandos of Sudeley, and was first married to Sir Thomas Smith, Master of the Requests, and Latin Secretary to James I. At the Strawberry Hill sale, in 1842, this full-length brought a sum that marked it for an indifferent example of Vandyck. In the British Museum is a clever and animated sketch of this lady in black chalk on green paper, seated. The countess died in 1663, aged 83, and is buried with the *Exeter* Cecils in Westminster Abbey.

Earl de Grey and Ripon has in London (as Lord Hardwicke has at Wimpole) a very fine full-length of Rachel de Rouvigny, Countess of Southampton, wife of the Lord Treasurer Southampton, the son of Shakspeare's patron. Walpole and Granger call Lord Hardwicke's the original. The picture has been well engraved in mezzotinto by M'Ardell.

At Apethorpe (Lord Westmorland's, in Northamptonshire) is a full-length in white of Rachel Fane, Countess of Bath, daughter of Francis, first Earl of Westmoreland. She was twice married, —first to Henry Bourchier, Earl of Bath, and secondly to Lionel Cranfield, Earl of Middlesex. Waagen, calls it "an elegant picture in his latest silvery tones." Mr. Fane De Salis, of Dawley Court, near Uxbridge, has a duplicate of the same lady, painted in 1636; and a full-length in black (still finer) of her first husband, the Earl of Bath.

At Lord Radnor's (Longford Castle, in Wiltshire), is a fine full-length in white satin of Catherine Wotton, Lady Stanhope and Countess of Chesterfield, mother of the handsome Earl of Chesterfield of De Grammont's Memoirs. Another at Blenheim. There was one in white among the Wharton-Walpole pictures.

"Such killing looks, so thick the arrows fly,
That 'tis unsafe to be a stander by."
Waller ("The Triple Combat").

This lady was a wit; had three husbands, and was Countess of Chesterfield in her own right. Vandyck looked at her with more than pictorial eyes. Read what follows:—

"It was thought that the Lord Cottington should have married my Lady Stanhope. I believe there were intentions in him, but the lady is, they say, in love with Carey Raleigh. You were so often with Sir Anthony Vandyck, that you could not but know his gallantries for the love of that lady; but he is [has] come off with a *coglioneria*, for he disputed with her about the price of her picture, and sent her word that if she would not give the price he demanded, he could sell it to another that would give more."

This was Carew Raleigh, Sir Walter's son, born during his father's imprisonment in the Tower. The king appears to have obtained it for a time; for in his last letter from Hampton Court he thus writes:—"There are three pictures here which are not mine, that I desire you to restore; to wit, my wife's picture in blue, sitting in a chair, you must send to Mistress Kirke; my eldest daughter's picture, copied by Belcamp, to the Countess of Anglesey; and my Lady Stanhope's picture to Cary Rawley."

Anne Villiers, Countess of Morton (d. 1654), daughter of Sir Edward Villiers (half-brother of Villiers, first Duke of Buckingham) and wife of Robert Douglas, eighth earl of Morton (d. 1649), may be seen, not to Vandyck's advantage, at Althorp and Petworth. Waller's New Year's Day verses to her at Paris are as fresh as ever. Lord Grandison, of whom we have a fine full-length by Vandyck, was her brother. The far-famed Duchess of Cleveland was her niece.

The Longford collection includes a full-length in yellow satin, with roses in one hand, of the Countess of Monmouth, wife of Robert Cary, Baron Carey of Leppington and Earl of Monmouth,—the Carey who carried so quickly to Scotland the news that Queen Elizabeth was dead, and King James VI. of Scotland had become King James I. of England.

The Countess of Worcester, in blue, was among the Wharton and Walpole pictures. This was Anne, only child of John Lord Russell, who died in the lifetime of his father Francis, Earl of Bedford.

At Knowle, in Kent, is a full-length, in white satin, of Mary Curzon (died 1645) wife of Edward Sackville, fourth Earl of Dorset, whose portrait by Vandyck I have already catalogued,—a rocky landscape in the background.

At Dunham-Massey is a good portrait to the waist, in black, holding a rose, of Lady Diana Cecil, Countess of Oxford and Elgin.

In the dining-room at Chatsworth is a full-length of Elizabeth Cecil, Countess of Devonshire, daughter of William Cecil, Earl of Salisbury, and wife of William Cavendish, third Earl of Devonshire; and at Petworth, a three-quarter, in white, standing, of the same countess, holding a red rose, with pearl necklace and ringlets. This lady was the mother of the first Duke of Devonshire, King William's duke, Lord Macaulay's duke.

At Petworth is a three-quarter portrait of Dorothy Percy, Countess of Leicester, in white, with blue cloak, grey scarf, pearl necklace, and ringlets. This celebrated lady, with true Percy and Devereux blood in her veins, was the mother of Algernon Sydney, the patriot,—of Waller's "Sacharissa," Dorothy, Countess of Sunderland, and of Henry, Earl of Romney, the "handsome Sydney" of De Grammont's Memoirs. This suggestive portrait is engraved in Lodge.

The same rich collection contains a companion portrait of her younger sister Lucy Percy, Countess of Carlisle, in crimson and orange, standing, and dipping her right hand in a fountain; pearl necklace and ringlets. A repetition, equally good, is at Windsor. What Granger calls "the original,"—the Wharton picture,—passed into the hands of James West, esq., of the Treasury, a great and not forgotten dealer among men who know in what way and at what prices property has changed hands in England.

A very fine three-quarter portrait of Anne Carr, Countess of Bedford, is another Petworth treasure. This lady,—the daughter of the infamous Earl of Rochester and Countess of Essex, and, stranger still, mother of William Lord Russell, the patriot,—is in blue silk (standing), glove in right hand, grey scarf over left shoulder, pearl necklace and ringlets. Repetitions may be seen at Woburn (in white), and at Althorp. Copies exist at Hagley and at Dunham-Massey.

Still another Petworth prize, a three-quarter in black, standing, of Dorothy Sidney, Countess of Sunderland. (Waller's "Sacharissa"), red scarf, left hand resting on a large vase, his right pointing to a rose-bush with red roses upon it, pearl necklace, and ringlets. A repetition at Althorp. Montague Lord Halifax has a copy of verses on this picture. At Hall-Barn, near Beaconsfield, there was when Granger wrote (1775)*, a portrait of the Countess, which Sacharissa herself, it is said, presented to Waller.

At Althorp is a full-length of Penelope Wriothesley, Baroness Spencer, in a blue silk dress and pearl necklace. The action of walking, and the gambols of a little dog, those easily

found conditions of all portraiture, give life to the work of a doubtful Vandyck.

At Windsor (part of King James II.'s collection) is one of his finest and most ambitious works—a full-length, seated, of Lady Venetia Digby, treading on Envy and Malice, while her arm remains unhurt by a serpent that twines around it. This lovely woman, with the true Stanley and Percy blood in her veins, was the mistress of Richard, third Earl of Dorset (died 1624), and afterwards the wife of Sir Kenelm Digby. Ben Jonson calls her his "Muse," and had her leave, he tells us, "to call her so."

> "She had a mind as calm as she was fair,
> Not toss'd or troubled with the light lady-air,
> But kept an even gait, as some straight tree
> Moved by the wind, so comely moved she.
> And by the awful manage of her eye,
> She sway'd all business in the family.
> To one she said, 'Do this'—he did it; so
> To another 'Move,' he went; to a third, 'Go,'
> He ran; and all did strive with diligence
> To obey, and serve her sweet commandements."
>
> *Ben Jonson.*

There was scandal about her to the last; but of the particular nature of the gossip and whisper nothing certain is known. Jonson sings her "fair fame" in some of the last runnings of his pen, and his verses on her sudden death suggested (I see reason to think) this very picture to the fanciful head of Sir Kenelm and the fertile pencil of Vandyck. Lord Clarendon, in his autobiography, alludes to the "extraordinary beauty, and as extraordinary fame," of Lady Venetia. By Sir Kenelm she had three sons,—Kenelm, John, and George.

Walpole mentions a fine little picture or model, exquisitely finished, of this noble work.* It passed from the hands of Mr. Walker and Mr. Skinner, and thence to Sir Eliab Harvey; but who has it now I know not.†

At Bothwell Castle, in Scotland, is a full-length portrait, in white satin, standing, of Lady Paulet, part of the Clarendon Collection; a rose in her right hand, the left holding her dress; "on the right a curtain of very powerful red; on the left a ground of one colour."‡ Waagen, whose words I have copied, calls it "a charming picture, carefully executed in a clear silvery tone."

In the Marquis of Breadalbane's apartments, at Holyrood, I saw in 1859, a very fine full-length (in white satin and blue scarf, holding a lute; the landscape bold and glowing) of Lady Isabella Rich, daughter of Henry Earl of Holland, married to Sir James Thynn, of Longleat. This is the lady made immortal in verse by the Muse of Waller. The neatly-turned poem "Of my Lady Isabella playing on the Lute" is addressed to her:—

> "What moving sounds from such a careless touch!
> So unconcerned herself, and we so much!
> What art is this, that with so little pains
> Transports us thus, and o'er our spirits reigns?"

To this I will add, what Waller's commentators do not tell us, that the poem "Of a Tree cut in Paper," and the poem that follows in all editions of Waller's works "To a Lady from whom he received the copy of a poem, entitled 'Of a Tree cut in Paper,' which for many years had been lost," are both addressed to Vandyck's lovely sitter.§

In the dining-room at Chatsworth, is the Wharton and Houghton full-length, in white, of Philadelphia Cary, daughter of Robert Cary, Earl of Monmouth, Queen Elizabeth's "Robin," and in Broxbourne Church (Herts.) is the following epitaph:—"Here lieth the Body of the Right Honourable Lady Philadelphia Cary, one of the Daughters of Henry Cary [Earl] of Dover, who departed this Life the 30th day of March, Anno Domini, 1689." ‖ I suspect that I have in this epitaph clearly *identified* the Chatsworth lady.

At the same place and in the same room is a full-length, in black, of Anne Cavendish Lady Rich. This lady died, 1638, at Lees, in Essex, at the early age of twenty-seven, leaving an only son, married to the youngest daughter of Oliver Cromwell. Waller has a fine poem on his death, and his tomb at Felsted, in Essex, is inscribed with verses by Godolphin and prose by King Charles's Bishop Gauden. The Wharton full-length is at Wimpole, Lord Hardwicke's.

A very charming three-quarter piece of Mrs. Olivia Porter, wife of Endymion Porter, of the bedchamber of Charles I., hangs at Petworth; in brown and blue, roses in right hand on table, and a profusion of fair ringlets.

At Earl de Grey's, in London, is a full-length of Mrs. Kirk, of the bedchamber of Queen Henrietta Maria. Duplicate at the Grove. A repetition (I presume) was exhibited at the British Institution in 1815.*

At Hampton Court, is a fine three-quarter portrait of Mrs. Margaret Lemon, the mistress, it is said, of Sir Anthony. Another portrait of the same lady as "Judith with a Sword," was sold at the Strawberry Hill sale for 75 guineas; Earl Spencer has a repetition of it at Althorp.

A picture, called in the catalogue "Vandyck's Mistress, by himself," was sold in the six days' sale (March 1741-2) of some of the effects of Edward Harley, Earl of Oxford; the price 57*l.* 15*s.*; the purchaser, Mr. Hanbury Williams.

At Warwick Castle is Lady Brooke, seated in an arm-chair, in a black silk dress richly adorned with jewels: at her side her young son, in a red silk flowered dress; at her feet a greyhound. This is the wife of Robert Lord Brooke, "fanatic Brooke," who lost his life at Lichfield.

In the drawing-room at Houghton hung the three-quarter portrait of Jane, daughter of Lord Wenman. "The hands," says Walpole, "in which Vandyck excelled, are remarkably fine in this picture." Lady Wenman's portrait is now at St. Petersburg. This Jane Wenman was the wife, I see reason to believe, of Arthur Goodwin.

The Walpole full-length (in blue) of Margaret Smith, wife of Thomas Cary, of the Bedchamber, brought, at the Strawberry Hill sale, 78*l.* 15*s.* Bought for Colonel Tynte. Walpole calls it "a fine picture of a lovely woman." In the marriage register of St. Andrew's, Holborn, I found this entry: "Thomas Cary and Margaret Smith weare maryed the 18 day July 1626 licens facult."

The last I have to name is Lord Lyttelton's so-called portrait of Lady Vandyck herself, a poor picture of spurious parentage and name.

When and where Vandyck was married no diligence, and it has not been idle or without pecuniary temptation,† has discovered. The lady was of noble birth, Mary Ruthven, daughter of Patrick Ruthven, fifth and last surviving son of John, first Earl of Gowrie, younger brother of the Ruthvens of the Gowrie conspiracy, by his wife Elizabeth Woodford, widow (1617) of Thomas, first Lord Gerrard, of Abbots Bromley, in Staffordshire. Her mother died in 1627, and her father, after nineteen years' confinement in the Tower, died in 1652, in the King's Bench Prison.‡

By his wife Vandyck had one child, Justina, born on the 1st day of December, 1641, and baptised on the very day her father died. She married a Stepney, and the blood of the great painter may still flow in the veins of some one of that name.

Four days after his daughter's birth Vandyck made his will, being, as he says, "weak of body, yet enjoying my senses and understanding." On Thursday, the 9th, his daughter was christened in the church of St. Anne, Blackfriars, the church of the parish in which he lived, and on Saturday, the 11th, Vandyck himself was buried (according to his own directions in his will) "in the cathedral church of St. Paul, in London." The spot selected was "near the tomb of John of Gaunt," as Nicasius Roussel, jeweller to the king, who lived in the Blackfriars, and was present at the painter's burial, recorded in his pocket-book.

No inscribed stone covered his grave, but his burial in the metropolitan cathedral of Great Britain has made St. Paul's a kind of Painters' Corner. His rivals in reputation, Sir Joshua Reynolds and Sir Thomas Lawrence, lie where Sir Anthony Vandyck lies.

> "Vandyck is dead; but what bold Muse shall dare
> (Though poets in that word with painters share)
> T'express her sadness? Poesie must become
> An art like Painting here, an art that's dumb."
>
> *Cowley, on the Death of Sir Anthony Vandyck, the famous Painter.*

The face of Sir Anthony is perpetuated by the masterly etching he has left of it. Of his manner of life nothing is known. An Alien List informs us that he kept six servants, while we learn from the register of St. Anne, in the Blackfriars of London, that Jasper Lanfranck, "a Dutchman," and Martin Ashent, "Sir Anthony Vandyck's man," were buried from his house in the year 1638.* His country-house at Eltham, in Kent, is a tradition, and a tradition only. Sir Peter Lely had a country-house at Kew Sir Godfrey Kneller at Whitton—and Sir Joshua Reynolds at Richmond—Sir Anthony *may* have had his country-house at Eltham.

Vandyck died before King Charles raised his standard at Nottingham; before Cromwell, and Ireton, and Blake were distinguished characters. There were men of eminence, however, who might have sat to him whose features awaken a lively interest imperfectly preserved by the inferior pencils of Dobson and Walker. It would be difficult to contemplate a full-length of Hampden by Vandyck, without extraordinary delight. Hampden, Eliot, and Pym were men of great celebrity in London during Vandyck's residence in Blackfriars, and yet there is no reason to believe that they ever sat to him. Another name of eminence deserves to be mentioned: Ben Jonson might have sat to Vandyck, and on Vandyck's canvas would have looked a noble companion and rival to the head of his old assistant and antagonist, Inigo Jones. A little reflection will suggest many like regrets,—Shakspeare might have sat to Vansomer, Milton to Lely, Burns to Raeburn, and Byron to Sir Thomas Lawrence.

Of the prices he obtained, some account will be expected. He had 40*l.* for a half-length, and 60*l.* for a whole-length.

Of his system of mixing and using his colours, some very interesting notices have been lately brought to light by Mr. Hendrie, the learned editor of "Theophilus." Mr. Hendrie discovered them in a MS. book of Sir Theodore de Mayerne's, a famous physician in the reigns of James I. and Charles I. The first entry records a conversation with the painter about the nature and qualities of oils:—

"Sr Antony Van Deik, chevalier, peintre très excellent Londres, 30 Xbris 1632. N.B. Oil is the principal thing which painters should be choice in, endeavouring to have it good colourless fluid; for otherwise, if it be too thick, it alters all the finest colours, espec ally the blues, and whatever is made with them, as the greens.

Linseed oil is the best of all the oils; it even surpasses nut-oil, which is more fat, and that of the poppy-seed, which becomes so, and easily thickens.

Having suggested to him that those colours, blue and green, when applied with gum-water or isinglass in distemper, and then varnished, are as good as colours applied with oil, he told me he very often had it in the colours in his pictures with gum-water, and when they were dry, passed his varnish over them; but that the secret consists in making colours in distemper take and adhere to a priming in oil. This is accomplished certainly and permanently, if the juice of onion or garlic be passed over the priming; the juice, when dry, receives and retains colours mixed with water.

This conversation arose in consequence of his telling me that Signor Gentileschi, a Florentine painter of merit, has a very excellent green prepared from an herb, which he makes use of in his oil pictures, possibly in the mode above described."

The second is without date:—

"Treatment of yellow. He [Van Dyck] makes use of orpiment, which is the finest yellow that is to be found; but it dries very slowly, and, when mixed with other colours, it destroys them. In order to make it dry a little ground glass should be added to it. In making use of it, it should be applied by itself, the drapery (for which alone it is fit) having been prepared with other yellows. Upon these, when dry, the lights should be painted with orpiment: your work will then be in the highest degree beautiful.

He spoke to me of an exquisite white, compared with which the finest white lead appears grey, which, he says, is known to M. Rubens. Also of a man who dissolved amber without carbonising it, so that the solution was pale yellow, transparent."

The third is dated 20th May, 1633:—

20th May, 1633, à Londres. The ground or priming for pictures is of great consequence. Sir Antonio Van Deik has made the experiment of priming with isinglass; but he told me that what is painted upon it cracks, and that this glue causes the colours to fade in a very few days. Thus it is good for nothing.

Having given him some of my good [amber] varnish to work with the colours, by mixing it with them on the palette in the same mode as the varnish of Gentileschi is used, he told me that it thickened too much, and that the colours in consequence became less flowing. Having replied that the addition of a little spirit of turpentine, or other fluid which evaporates, would remedy this, he answered, that it would not; but that remains to be tried.

He has tried the white of bismuth with oil, and says that the white prepared from lead, the material commonly used, provided it be well washed, is much whiter than

‡ Mr. John Bruce in "The Archæologia," vol. xxxiv., p. 293.

* I owe my knowledge of these entries in the registers of St. Anne's, Blackfriars, to the courtesy of an accomplished friend and old fellow labourer among biographical records, Mr. John Payne Collier:—

"Jasper Lanfranck, a Dutchman, from Sir Anthony Vandikes, buried 14th February, 1638."

"Martin Ashent, Sir Anthony Vandike's man, buried 12th March, 1638."

Lanfranck was Vandyck's assistant and friend; Martin Ashent was his valet or man-servant.

nat of bismuth. The latter has not body enough, and is nly good for the miniature-painter."

The varnish which he used has been preserved y Norgate,* the limner, with whom he lodged in his second visit to England.

"Sir Nathaniel Bacon's varnish for oyl pictures. Alloo was the vernish of Sr Anthony Vandike, which he used hen he did work over a face again the second time all rver, otherwise it will hardly dry. Take two parts of oyl f turpentine, and one part of Venice turpentine; put it n a pipkin and set it over the coles on a still fire, untill begin to buble up; or let them boyl very easily, and op it close with a wett woollen cloth untill it be cold. hen keep it for your use; and when you will use it, lay by warm, and it will dry."

Vandyck is said to have used a peculiar kind f drying oil, which he prepared in his own ouse, and never kept by him more than a nonth, for after that time he found it lost many f its virtues. It is further related of him that e was curious in keeping all his colours dry, xcept white, which he ground with nut-oil, and ept under water. This, too, was the practice of f Sir Peter Lely, who wrought in the same chool, and arrived in England in the year in hich Vandyck died.

f The task I undertook I have now concluded, nd I quit a favourite subject in a lively hope hat my labours will be of use in exciting others o enlarge our knowledge of Vandyck "in" and ut of England.

PETER CUNNINGHAM.

* Norgate MS. (Eastlake, p. 743).

THE WISE AND UNWISE USE OF BUILDING MATERIALS.

f THERE is a very general impression, which ppears to me not without foundation, that our nodern system of building causes a great deal of noney to be wasted which might be better employed. We have adopted the outward resemblance of the buildings of our ancestors in the Middle Ages with great advantage, but we have ot yet revived their wise, and skilful, and economical modes of construction: we still follow h this respect the traditions of the last century nd of the Italian school. This wasteful expenditure as shown in various ways. The builders aturally encourage it, as making good for trade, nd the architects too frequently act upon the ame principle, and make it their business to ead their employers on to spend as much money s they can, without seeming to do so, rather han try to save their pockets, as it is abstractedly heir duty to do, but against their own interest. am afraid that in the weakness of human ature, when abstract duty is put in one scale nd the pocket in the other, the pocket is very pt to weigh the heaviest. One way in which his waste is shown is in the carriage of building naterials from a distance without making sufficient inquiry beforehand how far the materials ound on the spot can be made available. I remember an instance when, by the architect's dvice, Scotch granite was brought to build a lain parapet and steps, which could have been uilt of the stone of the country for a fourth art of the cost, and the architect had his commission on the price of the granite. Of course is only motive was the benefit of posterity: he stone of the country would not last so long s the Scotch granite. To judge by that which replaced it would have lasted about 300 years, ut that was not long enough for a conscientious rchitect, who looked to the interest of posterity nly. Our ancestors would have used the stone f the country, and trusted to their posterity to enew it when it became necessary.

In some districts the only material of the ountry is chalk, and in chalk flints are generlly abundant. In such districts our ancestors uilt their churches of chalk, and faced them ith flint on the outside to keep out the wet. We have hundreds of such churches built in the welfth and thirteenth centuries now remaining n use; and if they have not been wantonly inured by digging graves under the foundations, hey are generally quite sound. But no modern uilder or architect would condescend to build n such a vile, detestable manner: it is quite ut of the question, it would be a disgrace to hem. Wherever a crack has been caused in he old chalk walls by the undermining of them, t is quite impossible to repair them in the same manner as they were built, and strengthen the oundations with concrete, filling up the graves, nd forming a surface drain. Oh, no! that is uite out of the question: it would be a disgrace o all the parties concerned. If a poor ignorant ountry parson venture to plead the fact that his old church has stood for six or seven hundred years, and that he and his people are attached to it, Mr. Conceit,* the architect, and Mr. Pocket, the builder, are astonished that an educated gentleman and a clergyman can be so ignorant and so stupid. Can he not see what absolute rubbish the walls are,—that directly you begin to pull them about they tumble down? It is quite impossible to let them alone. Of course the whole church must be pulled down and a new one built in the newest fashion, of party-coloured bricks brought down from London by train. We must have something Venetian or Lombardic, and a dapper caricature of an old open timber roof, made of timber a few inches thick—of oak of course, because it will last twice as long as deal, and cost twice as much money —all for the good of trade. As for that old chalk vault, with which your chancel has been covered for six hundred years, and which you in your ignorance would have liked to have seen copied over your nave also, that is absolute rubbish too: only get a ladder and examine the top of it, and see how roughly it is built: no modern builder could build such rubbish as that, and no modern architect would certify to his work, if he did.

In other districts the material of the country is a hard, rough, coarse stone, very difficult to cut, but everlasting in its rough state. Our ancestors were content to build their walls of this rough stone, and plaster and paint the interior; or, if they brought any freestone at all from a distance, it was only just sufficient for the corners and for the frames of the doors and windows. A modern builder and architect consider it absolutely necessary to have the whole faced with ashlar, brought from Bath or from Caen, at an enormous expense for carriage; and neither of them ever thinks of going to the quarries and examining the quality of the stone before he orders it, as our ancestors did. He does not know or care for the fact that there are two sets of quarries near Caen, on different sides of the town, and that the stone from these two quarries is of very different quality. The stone from *La Maladerie* quarries is sold to the inhabitants at a much lower price than that from the *Haute Allemagne* quarries, but large quantities of the cheap and inferior stone have been sent to England during the last twenty years, and it is generally believed at Caen to have been charged at the same price as the best stone. A stone merchant who had large dealings with England, recently tried to play off this trick on the French Government, was detected, and is now in prison for it. This is another instance of the manner in which money is wasted in building materials, and the well-established reputation of Caen stone has been seriously injured at the same time.

In other districts the material is gravel or shingle. No modern builder dreams of using such materials, but our ancestors bound these loose materials together with lime used quite fresh, and made an artificial concrete as hard and as durable as any natural rock. I have seen long stones like beams made of such artificial concrete used over the openings of doors and windows in preference to soft stone, as being stronger. The pier of Dover is built of this sort of artificial concrete, made from the shingle on the sea-shore—exactly the same practice as our ancestors used in the twelfth century. But they were not acquainted with the principle of the expansion and crystallization of lime which binds this mass together, and therefore did not always use their lime quite fresh; consequently in such cases the lime had no strength in it and did not bind. From this cause it occasionally happens that when a hole is made in an old wall the loose materials in the interior begin pouring out, as if the whole wall was coming down together. Probably the loose portion does not extend more than a few feet, but that does not matter. Mr. Conceit at once condemns the whole wall, and wonders how such rubbish could ever have stood so long, although perhaps a few feet farther on in the same wall the workmen find it break all their tools, and are obliged to employ gunpowder to get rid of it. Walls built in this "rubbishing" manner have often been allowed to stand for centuries after every bit of ashlar has been stripped off, merely because it costs more to destroy them than the materials are worth, as in the ruins of Reading Abbey.

In other districts the material of the country is clay, which can generally be burnt, either on the spot or near at hand, into brick, one of the best and most durable of building materials, but one which is very commonly rejected by Mr. Conceit and Mr. Pocket as not being sufficiently genteel; and they accordingly persuade their employer to buy stone a hundred miles off, solely because it will look so much more handsome. Of course, neither of them ever once thinks of the insignificant fact that one gets his profit in trade, and the other his commission on the value of the stone, including the cost of carriage. Our ancestors, also, did not always make their bricks in the same mould: on the contrary, they had a variety of moulds for different parts of the buildings and different purposes. The jambs of their doors and windows, and their arches, were made of moulded brick. Some of the finest churches in Europe are built entirely of brick, with all the details of moulded brick; and this practice was not confined to any one district or country. Such brick buildings remain in Flanders, in the south of France, in Italy, in the north of Germany, and in Denmark, as well as in the eastern counties of England, as at Colchester, and in Norfolk commonly. Let any one compare the moulded brick chimneys of the Tudor period, of which hundreds remain in many parts of England, with any modern chimneys, and then say whether the interested motives or the ignorant prejudices of Mr. Conceit and Mr. Pocket ought to be listened to. The moulded brick chimneys of our ancestors are an important ornamental feature in the houses, and often in the landscape also. Modern chimneys, of whatever material they may be built, are in general nothing but an abomination, and a disgrace to the age. Our builders and architects really seem to have tried hard which could produce the ugliest set of chimneys. Let any one walk down one side of Regent-street and look at the chimneys on the opposite side, and then compare them with the chimneys of the old manor-houses or farm-houses, and say whether such modern rubbish ought to be tolerated. Of course, the excuse here will be the cost; but it is a false excuse. Moulded brick is not an expensive material in a clay country. Clay may also be moulded by hand to any form that may be required, and then baked, and the form so given will be as lasting as stone.

Some districts are even worse off for building materials than any I have mentioned, and still even there our ancestors contrived to erect buildings of the most wretched materials, that have stood for centuries, and look better, after all, than the modern Cockney gimcracks which are stuck up in their place, and which look exactly as if some house out of a street in London had by accident been transported into the country, and cries out loudly for its companions to support it on either side. I am thinking now of those districts where there is neither stone nor clay, and where the old walls are made literally of mud, or of earth beaten hard, with a little hay or straw, or a few rushes to bind them together, and the roof covered with thatch. This is the case in a large part of Devonshire, where these mud-walls are called cob-walls, and in some parts of Wales, and other districts. These cob-walls are not without their advantages: they must be built thick, and one consequence of this is, that the house is warmer in winter and cooler in summer than its modern rival, with its brick walls 9 inches thick, and thin blue slate covering to the roof. But cob-walls also cost only half the money, and that is a fatal objection to Mr. Pocket and Mr. Conceit.

Our fathers had substituted flat plaster ceilings for the chalk vaults or the ornamental wooden ceilings of the Middle Ages; therefore, as Mr. Conceit must always go from one extreme to another, we must now have the most ludicrous caricatures of open timber roofs executed in thin deal. This foolish mania is carried so far, that I have seen within the last year a very handsome panelled and well-moulded flat ceiling of oak, of the fifteenth century, removed, to make room for one of these modern caricatures, which have the additional evil of making our churches very cold in winter and hot in summer. A good deal more might be said on the subject of building materials, but I fear I have already trespassed too much on your space.

A TRAVELLER.

* "Mr. Conceit is the successor in business to Mr. Compo, who was so well known to the profession and to the public some twenty or thirty years since, and was so admirably described by the able author of 'St. Antholin's.' Of course, both of them were the black sheep of the fold only, and were entirely discountenanced and disclaimed by the great bulk of the architectural profession, which contains as many honourable gentlemen as any other; but no profession or trade can be kept entirely free from black sheep."

SANITARY.

Tunbridge Wells. — The report of a committee appointed by the town commissioners to consider the question of water-supply, together with a report by Messrs. Nixon & Dennis, engineers, employed by the committee, to ascertain the means available for that purpose, has been printed. Three plans are suggested. "Plan No. 1 embraces a complete and total supply from the springs at Pembury, and entirely independent of the existing works. Total cost, 30,500*l.*; annual expenses of working, &c., inclusive of interest on outlay, 2,635*l.* Plan No. 2 contemplates a supply partly from the springs at Pembury, and partly from existing works. Total cost, 22,820*l.*; add cost of purchasing existing works; annual expenses of working new and old works, and inclusive of interest of new works, 2,740*l.* Plan No. 3,—supply derived partly from Ashdown Forest by gravitation, and partly for highest service from existing works. Total cost, 38,500*l.*; add cost of purchasing existing works; annual expenses of working new and old works, inclusive of interest on outlay of new works, 2,775*l.*" The adoption of plan No. 1 is recommended. "The committee," say Messrs. Nixon & Dennis, "would thus secure a complete and harmonious scheme in lieu of one of patchwork, made up of old and new systems, very difficult to adjust, and expensive to maintain."

Tranmere (Cheshire.)—A report to the health committee of the Tranmere local board on the sewerage of the township and disposal of the sewage, has been made by Mr. W. A. Richardson, the resident engineer and surveyor to the local board. In this report the surveyor submits a scheme of sewerage with reference to the physical characteristics of the township. The total cost of this scheme is estimated at 8,213*l.* The reporter says, with regard to the utilization of the sewage, that he cannot advise the construction of works for this purpose at present. "In conclusion," continues the report, "allow me to say, that considerable benefit has resulted from the construction of the sewers and roads, drainage of houses, and flagging of footwalks and passages, in Tranmere Park, Mill-street, &c., and south Tranmere; the death rate in the township having been reduced from 22·00 in the thousand, which it was for the year ending 31st March, 1860, when the Local Government Act was adopted, to 19·50 for the year ending 31st March, 1863." Higher Tranmere, however, is described in the report as being still in the most wretched state for want of sewerage, and Lower Tranmere is, apparently, not much better in that respect.

Portsmouth.—Smallpox is just now very rife in Portsmouth and its suburbs, as it is in many other parts; and orders have been given from the Admiralty to defer the embarkation of troops and naval supernumeraries for China on board the screw troop-ship *Adventure*, and to send the ship out to the Quarantine anchorage at the Motherbank, to await further orders, as a case of smallpox has occurred on board.

Kidderminster. — Smallpox, which has also been for about six months very fatal in this neighbourhood, particularly in the North Ward, is still continuing its ravages. For a long time the Horse-fair has been the centre of infection, but it has now extended to the country district, Broadwaters, &c. There is no doubt that defective sanitary arrangements here are the support, if not the cause, of this loathsome malady. The inspector of nuisances reports, on the buildings where the smallpox has raged; that in one yard pigs were kept in a brewhouse adjoining the house where children were ill of the disease, and the whole gutter-drainage emptied into a grate under the pump-trough, polluting the well; the tenants, too, had dunghills within two yards of their doors. In another small and confined yard there was a pigstye, dung collected from the roads, a privy with the floor a foot below the yard, and ankle-deep with the drainage from the dunghill and pigstye, and a range of stabling, privies, and slaughter-houses, all adjoining. The slaughter-houses in and around the Horse-fair neutralize all the advantages of a high and dry situation, and make its neighbourhood a regular nest for fever and contagious disorders; while Lark-hill, one of the most beautiful places in the town, has had no sewerage provided; and, having become densely populated, the consequences may be conceived.

Beaufort.—A few weeks ago an official from London paid a visit to this neighbourhood, for the purpose of ascertaining what the sanitary condition of the place was; and he closely inspected the whole village, accompanied by one or two gentlemen interested in the cleanliness and well-being of the people. Soon after his return to the metropolis, a copy of his report was sent to the board of guardians for the parish of Llangynider, which includes the principal portion of Beaufort; and owing to the bad account of its sanitary condition given in that report, the board at once ordered a public meeting of householders and others to be called at Beaufort, to consider the best means to adopt for the general cleansing of the place. The meeting was addressed by about twenty speakers; and from the general tone and feeling, all seemed to admit that the sanitary condition of Beaufort is excessively bad, and all were anxious for its improvement, but wished to have this effected without the introduction of a Board of Health, or even the assistance of the Brynmawr Board. A committee was appointed to inspect the neighbourhood, and give evidence at a forthcoming meeting of officials.

Workington (West Cumberland).—The trustees of the town of Workington have instructed Mr. John Lawson, C.E., of London, to report to them as to the best mode and probable expense of sewering that town.

SOANE.

IN his most interesting and also instructive autobiography, Charles Knight has recorded the action brought against him by Soane for the article in his (Knight's) *Quarterly*, entitled "Bœotian Architecture." The article itself was of such an innocently slipslop character, and in its stolidity said so much more against the lovely temple at Tivoli, with its "cabbage-leaved capitalled" columns, than against Soane himself, that, without any great exertion of philosophy, the latter might have overlooked, if he did not forgive, the insult, instead of showing himself so thin-skinned as to seek redress for the injury inflicted by the playful cat's-paw of criticism by calling to his aid the awful talons of law, and thereby keeping alive what else had long ere this been at the very bottom of Lethe. Unfortunately, however, for him, Soane was no philosopher: both as a man and an architect, he was a strange compound of contradictions. In the latter capacity he occasionally exhibited brilliant corruscations of true artistic feeling and genius, but far more frequently nothing better than utter tasteless insipidity. In more than one of his designs, and executed buildings also, there was a strangely discordant mixture of antipathetical elements of composition, which, however shaken up, united pretty much after the fashion of oil and water when forcibly married together. The prodigally embellished and the parsimoniously plain might often be seen in juxtaposition, with far more of startling contradiction than well-calculated contrast. What is not least of all surprising is, that one who had so carefully studied the charming Tivoli example, with its bossy frieze, should have adopted the directly opposite mode of decoration with mere sunken lines, thereby substituting baldness for boldness. Yet, if in Soane's works there is much to offend, much is there also to charm,—moreover, to instruct; and criticism should be a Janus, looking in two opposite directions, not a hireling advocate, who, besides shutting his own eyes to what it does not suit his purpose to notice, throws dust in those of other people.

In a fair estimate of Soane, a good deal would have to be placed on the debtor side of the account; but when it was cast up a very large balance would be found in his favour. In *planning* he was unsurpassed: in *contrivance* he was unapproached. Manifold are the inventive ideas that were first thrown out by him, and which are not the less valuable because susceptible of improvement: they ought also to be incentive to it. In fact, the study of contrivance ought to be regarded as almost indispensable to an architect; nevertheless, it is to be apprehended that at present no pains are taken to put pupils and beginners in the way of even so much as thinking about it. Style, it seems, is now all-sufficient—the very all-in-all, and a sufficient receipt in full for all deficiencies,—humdrum, or even positively inconvenient, plan included. But these somewhat "aside" remarks must not detain us.

If nowhere else, Soane certainly showed great *forte* in contrivance in his own house, which, though considerably too small for its present purpose, as a museum open to the public—though certainly under such stringent limitations as to be little more than nominally so—gives us plainly enough to see what may be made out of a very commonplace and ordinary-sized London house. One happy idea was that of not only extending the plan in the rear on the ground-floor, but also getting out a *crypt* with additional rooms below on the basement level. Now that it has once been done—the ice broken, the route pioneered—it strikes as strange that the same idea should not have presented itself to any one before; even stranger still that it has not since been adopted and acted upon. If it was not always well regulated, Soane undoubtedly possessed an affluent imagination, which, as matters go, is no inconsiderable merit.

Whether a lesson has ever been taken from it by any one or not, the *crypt*, or rather the general idea of it, is particularly worthy of the attention and consideration of an architectural visitor to the Museum, more especially as it may be varied almost endlessly. The foremost and most obvious variation from the present plan is that of forming a handsome flight of steps leading directly down to what, in the present house, is called the "Monk's Parlour," which, with respect to that or some room similarly situate, would be an improvement, by giving greater architectural character and importance to the approach to it. The general idea once adopted, others which would else never occur to him would almost of sheer necessity force themselves upon any architect not wholly destitute of imaginative faculty; all of them variously modified according to circumstances. Much, for instance, might be made of a *grotto-room*—no inappropriate one in a souterrain—and that when lit up by gas might, with a stalactite vault, be made to show a blazing galaxy of iridescent gleams. Again,—but enough; let me doff buskin fancies, and come to something more generally intelligible, referring also to Soane. Not a little less than unaccountable is it that in his "Public and Private Buildings" he should have given no illustrations of his own house and museum, and that he should have suffered the above-named work to go forth to the public so vilely—even disgracefully—executed; whereas, for the *bagatelle* of some ten thousand pounds or so,—and to him it would have been no more than a *bagatelle*,—he allowed what, at least, as regards the execution of the plates and its general getting up, ought to have been a *pracht-werk* to show itself *in formâ pauperis*, as if made only to sell. Poor Soane! he certainly proved himself to be an adept in the art of cheating one's own self.

AN ART LOVER.

MILITARY IDEA OF THE STATUS OF AN ARCHITECT.

ON the hoarding of the new buildings of the Foreign Office is a huge placard, evidently issued by some of the officials of the War Office. It is no quiz or hidden joke, but a genuine official red-tape document. It commences by stating, that "a few young men of good character are wanted to serve in Her Majesty's Royal Engineers." Then follows a list of trades, such as carpenters, bricklayers, blacksmiths, wheelers, coopers, &c.; and the inquiring public are informed, that these young men, wanted to serve her Majesty, "*should* be able to read and write."

Then follows this further announcement:—"Men of other *trades* are required, only in limited numbers, *such as* clerks, draughtsman, photographers, ARCHITECTS, printers, collar and harness makers, shoemakers, and tailors;" and, for the further encouragement of those of the respective *trades* of an architect, collar-maker, &c., there will be "a bounty of 2*l.* and a free kit." We, the architects, collar-makers, &c., are then directed to apply to Sergeant R. Griffith, R.E., Blue Boar's Head, King-street, Westminster; and the whole performance winds up, like the last bounce of an exhibition of fireworks, with "God save the Queen!"

Here is encouragement to the rising young men of the architectural profession. Only a limited number is required, so "be in time!" Having passed the examination in mathematics, physics, languages, &c., would no doubt be accepted as a proof that they are "able to read and write;" and then, think of the advantages of the fellowship with the collar-maker and the tailor, and, above all, the "bounty of 2*l.* and a free kit." What the architects' "kit" is to consist of we are not informed. We hope, however, there will be no mistake as to allotting their "kits" among the

trades," or the tailor may get a T square and drawing-pen, while the architect may receive a pair of shears and a goose. No bad premium, by the way, this last would be for men who go in for those swindles facetiously called "competitions."

There is no reason why Government should not advertise by placard: in fact, I expect we shall soon see other professions also invited to apply to the gallant sergeant at the Blue Boar's instead. The "kit," however, would differ according to the peculiar vocation of each. Thus, the young surgeon would be tempted by a lancet-case and a gallon of half-and-half; the young barrister by a crimson bag and order for the pit at the Princess's; the young physician by a gross of blue pills and a quart of black draught; the young curate by a dozen cambric handkerchiefs and a bottle of eau-de-cologne; the aspirant clerk of the Circumlocution Office, by a *Bell's Life* and a dozen real Manillas; the diplomatist by a stone or two of lead paper-weights and a gross of hanks of red tape; the debater by the last edition of Joe Miller; and so on.

There is one thing I *should* like to know, and that is, who can have penned this placard, where he was caught, and what strange chance threw him into the military service. He must be a curiosity. An *employé* of the Poor Law Board, inspector of spirit duties, mines, nuisances, &c., might plead that his peculiar avocations so took him from the world that he was sometimes at fault as to its courtesies and usages; but we generally find military men are gentlemen. Can any of your readers point out who it is, and satisfy the curiosity of,

Q.

The Corner.

*** The announcement is so outrageous that, but for the known character of our correspondent, we might be led to doubt the possibility of such a publication. It must have been dictated by either Impertinence or Ignorance, and we invite the authorities at the War Office forthwith to inquire which, and to give some explanation of the affair for their own sakes. Coming on the heels of some recent events, concerning which the public in general and the architectural profession in particular are not very well pleased, the Royal Engineers may find this joke of theirs, if joke it be, a more serious affair than they anticipate.—Ed.

SHAKSPEARE TERCENTENARY CELEBRATION.

The following further arrangements have been reported in connexion with the National Shakspeare Committee. The English residents in Paris, who have formed themselves into a committee in aid of the London Monument Fund, with Mr. Blanchard Jerrold as honorary secretary, have arranged for a banquet on the 23rd, at which Lord Grey, Lord Cowley, and other distinguished persons will be present. The working men of London propose, on the same day, to plant a sapling oak from Windsor forest, in one of the parks, to be henceforth known as the Shakspeare oak, and afterwards to have a monster gathering and musical festival at the Agricultural Hall, for which a specially interesting programme is being prepared. It is also announced that Cardinal Wiseman has undertaken to deliver a lecture on Shakspeare in aid of the national object, at St. James's, or some other large hall in London, in the month of June or July next.

The Lord Mayor has convened a meeting of influential persons connected with the city, to be held at the Mansion House, on Monday, April 11, at 2 o'clock.

Stratford-on-Avon.—The contractors for the erection of the Great Pavilion (Messrs. Branson & Murray, of Birmingham), having completed their work in the interior, the artisans who had been employed upon the building were entertained therein at dinner, and about 120 workmen partook of the hospitality of the committee. The building has now passed into the hands of the decorator (Mr. Brothers, of Leamington), under whom the pavilion will, it is expected, be finally completed by the middle of April. The local committee, having determined to place the responsibility of selecting a site for the monumental memorial to Shakspeare in the hands of men of recognised artistic taste and judgment, recently transferred their powers to a committee, consisting of the following gentlemen:—The Earl of Carlisle, K.G.; the Earl Somers, F.R.G.S., Sir Robert Charles Buxton, M.P., Mr. Robert Bell, F.R.S.L., Mr. Austen Henry Layard, M.P., Mr. William Stirling, M.P., Mr. J. Beresford Hope, Mr. Theodore Martin, Mr. C. L. Gruneisen, Mr. Gambier Parry, Mr. Tom Taylor; Mr. John Ruskin; and Mr. Alfred Tennyson, D.C.L. (Poet Laureate). A subcommittee of the above, having recently visited Stratford and inspected the various sites proposed, have unanimously chosen the Bridge-street site as uniting all the conditions required. "On the space thus cleared (they remark in their report), might be erected an elegant and effective loggia (in the Elizabethan style, with terra-cotta ornamentation) of from 50 feet to 60 feet long, by 25 feet to 30 feet wide. In its rear there would be room for a new market house, which might be made to harmonise in design with the memorial." Into the details of the design the sub-committee do not consider it within their present province to enter. The prices named for admission to the dramatic entertainments seem to us too high. Londoners, at any rate, will not be anxious to pay a guinea a piece to see the Haymarket company or the Lyceum company do what they may see the said company do on their own boards for a third of the money without the cost of going to Stratford.

Coventry.—It is intended, says the local *Herald*, that the entertainment here shall be not only in keeping with the dignity of the event, but entirely Shakspearian in its distinctive character. Tributary odes, composed by poets who are natives of or residents in Warwickshire or elsewhere, and to whom two handsome and appropriately-designed Coventry watches will be awarded for their pains, will be recited by a competent professional reader. One or two of the most eminent vocalists of the day have been engaged to sing Shakspearian ballads, and the music of Mendelssohn, Locke, and other composers, will be rendered by one of our best and most popular military bands. A few selections from the plays of Shakspeare will also be introduced. The music-hall will be appropriately adorned on the occasion with busts of Shakspeare and other great poets, while the pillars will bear illuminated scrolls, containing the titles of the whole of Shakspeare's plays, and combining with banners and evergreens to form an effective display. The mayor will preside on the occasion, and the entertainment will be given under the patronage of the nobility and gentry of the city and district.

Shakspeare's Will.—The will, which consists of three sheets of brief paper, has, by the direction of the judge of the Court of Probate, been carefully cleaned, and each sheet placed in a polished oak frame, between sheets of plate glass. The frames are made air-tight, and on the top of each is a brass plate engraved, "Shakspere's Will, 25th March, 1616:" each frame is fastened with one of Chubb's patent locks. The will thus will not be handled when shown to the public, which will very much add to its preservation. The three frames fit into an oaken box. The judge has sanctioned the taking of photographs of it, in the presence of one of the record keepers of the court. This permission was refused by the late Sir Cresswell Cresswell.

"FINE ARTS APPLIED TO INDUSTRY."

CANTOR LECTURES: SOCIETY OF ARTS.

In the sixth lecture, relating to furniture, Mr. Burges said, that under this very comprehensive title he would not confine himself to what is generally understood by furniture, but would enlarge upon the general decorations of the interior of our domestic buildings. He first of all called attention to the way in which this matter was arranged in the thirteenth and fourteenth centuries, showing from the extracts of the public records, published in "Parker's Domestic Architecture," how the ceilings were boarded and painted, and how the walls afforded endless subjects for the invention of the artist, while the better sort of furniture was also historiated with colour and gold. Some extracts, from Guillabert de Metz, and Vasari, were brought forward to show what were the domestic arrangements of the fifteenth century in France and Italy, the first extract being the description of a citizen's home in Paris in 1409, and the latter containing a long account of the works of Dello Delli, who was especially famous for his paintings on furniture. The next portion of the subject treated of the various modes in which articles of furniture could be ornamented. Thus, if the wood be made to show, it can be inlaid with marquetry, buhl, mother-of-pearl, ivory, or be partially covered with more valuable wood, or have ornaments in the metals, in marbles, and enamels. Again, when the wood is intended to be entirely covered, it can be decorated with various sorts of gilding, as in the coronation-chair at Westminster; or have paintings in certain parts, as in the presses at Noyen and Bayeux; or it can be painted and covered with varnish, like the Japanese work. The lecturer then observed that, although it was impossible for any one man to give the age a distinctive architecture or a new and picturesque costume, yet in his own house he could do completely as he liked, and if his rooms were furnished in bad taste the fault must rest with himself. A series of suggestions then followed for the decoration and furnishing of rooms, great stress being laid upon the desirability of giving some sort of decoration to our flat white ceilings, and of substituting wall paintings for paperhangings. The practice of filling the windows with one immense piece of plate-glass, thereby depriving the house of all scale on the outside, and giving the room a cold appearance from the inside, was also reprobated; and several suggestions put forward respecting the treatment of the floors, and of the furniture generally, moveable divans being recommended instead of the multiplicity of sofas and chairs. A few words on ecclesiastical decoration concluded the lecture, attention being especially called to the beautiful stalls at Amiens, and more particularly to the treatment of the moulding and carving. There were some specimens of furniture exhibited by prominent decorators and upholsterers.

The last lecture (delivered on the 21st ult.), treated of the Weaver's Art.

Mr. Burges began by stating how different costumes required different treatment in the designs of the fabrics which composed them; and after giving a short account of the principal features of the costume in the Middle Ages, he showed how, in spite of the perishable nature of all fabrics, we had sufficient materials for the history and for the illustration of those of the Middle Ages, thanks to the mass of documentary evidence and to the custom of burying distinguished persons in their official robes, and of wrapping up reliques in precious stuffs. It appeared that in the first instance the production was monopolised by Byzantine and the Eastern nations. It then extended to Sicily and Venice, to Italy and the rest of Europe, thus accounting for the prevalence of entire inscriptions on earlier specimens, and for the imitation of them much later. The gradual increase of the diaper or pattern was another curious peculiarity, the stuff composing the robe of the Emperor Henry VI., preserved in the duomo at Palermo, exactly resembling the Indian kincob. Allusion was made to the very excellent series of specimens of ancient stuffs at South Kensington, where the increase of the patterns was distinctly shown from the somewhat large diapers of the fourteenth century down to the great pine patterns of the latter end of the fifteenth century, resplendent with gold thread and crimson velvet. The lecturer next touched upon the Indian productions, of which some choice specimens had been lent by Dr. Forbes Watson, from the Indian museum. Attention was particularly directed to the beautiful kincobs, the Delhi embroidery, and the exquisite combinations of colour in the Cashmere shawls, as well as to the work about to be produced by Dr. Watson at the Government expense, which would contain specimens of a great quantity of Indian fabrics, each copy consisting of no less than twenty volumes. The Persian and Turkish carpets formed the next part of the subject, and were commended for their colours as well as for the excellence of the materials; and a reproduction of a Mediæval carpet by Mr. Fisher, from a pattern of Van Eyk's, was favourably noticed, as giving us a great addition to the floor coverings of our apartments. With regard to our modern productions, regret was expressed that from the nature of our present costume there should be no better scope for the colours in the fabrics made for our dresses, but at the same time it was remarked that there were stuffs devoted to other uses, which offered an almost unlimited field, such as damasks, chintzes, brocades, stuff for the table, as napkins; and for the beds, as counterpanes; coverings for chairs and other furniture, to say nothing of carpets and rugs. Mr. Crace was fortunate enough to secure the services of the late Mr. W. Pugin, and some of the fabrics made from his designs, more especially what was called the tapestry, left very little to be desired; the only

fault that could be noticed being the animal on the chintzes, which had been conventionalized after the fashion of the fifteenth century, instead of that of a purer period of art. The lecturer concluded his task with a few remarks concerning our future progress in art. According to him, the development will probably arise from our domestic architecture, political circumstances rendering it doubtful whether either public or ecclesiastical architecture will again exercise so much influence as they have done in other periods of the world's history. The great helps to improvement were then enumerated. 1. The better education of the designer by a more extended teaching of the figure. 2. Of the public at large, by bringing art collections, if not to their doors, at all events within their daily walks. 3. A wiser system of expenditure with regard to our public monuments. 4. A greater encouragement of the fine arts of painting and sculpture in our ecclesiastical buildings; and, 5. The abolition of the law of leasehold.

THE BRADFIELD, BRADFORD, AND OTHER RESERVOIRS.

Bradfield.—As to the liability of the Water Company, the *Sheffield Independent* says:—"The committee of sufferers by the late flood have obtained the opinion of Sir Hugh Cairns, Q.C., and of Mr. Brown, of the common law bar. Their opinion is to the effect that the company are liable to make compensation to every person, without distinction of class, who has sustained any legal damage or injury by the flood. The learned counsel also think it is clear that sec. 68 of the Act of 1853 imposes this liability on the company without proof of negligence on their part, and though there should have been no negligence. They are also of opinion that the sufferers can only take the property of the company in satisfaction so far as it will go." It is but justice to the company to state, in this connexion, that the directors are said to have had seven tenders, two of which were below the engineer's estimate, and that, instead of taking one of these they made the contract with a firm who asked 900*l.* more than Mr. Leather's estimate. The original contract was 27,469*l.*; and when it was found that an ancient landslip rendered it needful to change the site originally proposed for the embankment, that added 1,000*l.* more to the contract. More than 6,000*l.* has already been paid for extras, and they are going on still. They seem, therefore, to have been anxious to secure a thoroughly good and durable piece of work; and so far as regards loss of property, the disaster falls with its most serious weight upon them.——In a letter to the local *Independent*, signed "G. W. Hawksley," syphon pipes are recommended for drawing the water away from such reservoirs as that under notice, the water to be thus tapped over the embankment, instead of piercing the banks and drawing the water by outlet pipes laid through the bottom of the embankment, to the settlement of which from this cause Mr. Hawksley thinks the catastrophe may probably be ascribed.——The relief fund last week had reached to upwards of 30,000*l.* A waggon-load of bales of clothing and other necessaries has also been sent to Sheffield. The police list of killed and missing amounts to 276.——A letter has been received by the Water Company from Sir George Grey, enclosing a copy of a report from Mr. Rawlinson on the late inundation, and reminding the company of their serious responsibility in reference to the Agden reservoir, which is in course of construction, and which Mr. Rawlinson strongly condemns. The chairman of the company has since written to Sir George Grey, to say that the Agden works have been stopped.

Bradford.—The condition of the Doe Park and Silsden reservoirs, to which Mr. Ferrand lately called attention in the House of Commons, has been debated in the Bradford town council. Silsden reservoir was said to be in a perfect state of repair. As to the Doe Park embankments, there were, admittedly, some defects in them, but steps had been taken to make them secure. A member said Mr. Ferrand had an interest in preventing the corporation getting a certificate for the safety of the Doe Park reservoir. Letters in the local *Observer*, however, state that Mr. Ferrand only gave expression to the feeling of the inhabitants of the valley, and that "the embankment has been leaky ever since it was made, and has been patched up in five or six different places; and, to add to the danger, there is no by-wash," so that "if the reservoir at Doe Park were to burst or require to be suddenly emptied, the water must flow into Hewenden reservoir (which has only a small by-wash, scarcely sufficient for its own overflow), and would undoubtedly burst that also, and in half an hour hundreds of people would be drowned."

Rivington.—At a special meeting of the Liverpool Water Committee, to consider the condition of the reservoirs at Rivington and in the town, Mr. Duncan, the engineer of the waterworks, submitted to the meeting a long report, showing that all the local reservoirs are substantial well-tried structures, and that, with the exercise of ordinary precautions, the inhabitants will be preserved from an inundation like that caused by the yielding of the Bradfield embankment.

Dublin.—The Sheffield catastrophe has excited some alarm in Dublin. Sir John Gray, however, has assured the corporation that there was no danger of anything of the kind, for even should the embankment of the great reservoir at Roundwood give way, the water would flow down the Devil's Glen, and could not reach Dublin. They would be able, at any time they pleased, to let off 56,000,000 gallons by opening the sluices at the bottom of their works. Mr. Rawlinson, as consulting engineer of the corporation, had written a letter from Sheffield to Sir John Gray, stating that the embankments of the Dublin works have nothing in common with the Sheffield failure; that they are "sound in stratification, in material, in design, and in execution."

ROCHDALE PARISH CHURCH.

THE further enlargement and restoration of this church, dedicated to St. Chad, after having remained dormant for a long period, is now about to be resumed; and the completion of this, one of the few old churches remaining in the manufacturing districts of Lancashire, it is to be hoped, will be carried out and finished in a manner worthy of this rich and populous district. The church has already been partially restored, and a new aisle added on the north side of the chancel. The nave roof is new. The present unsightly and incongruous effect of the church, which has been only partially reseated, will speedily disappear; and, instead of ascending to the original level of the church, to that part which has been partially done by a step 12 inches high. The whole floor will now be uniform. A new aisle will also be added, affording a large increase of accommodation. The entire seating of the area of the church will be completed; the tower opened out, cleaned, and made to form the principal entrance; and the stonework is to be cleaned, restored, and made good. The new font, given some years ago, will be restored to its "canonical" place, and the interior entirely fitted and finished; and those who know the present distressing appearance of the church must rejoice over the prospect of its entire restoration. The works will be continued under the direction of the architect, Mr. Joseph Clarke, F.S.A.; and, should the funds permit, the other aisle, with the porch, will be rebuilt.

The restoration of the chancel, undertaken at the sole expense of the vicar, Dr. Molesworth, under Mr. Clarke's directions, will comprise a new roof; raising the floor to the proper level, with the retiling; a complete restoration of the interesting old stalls which remain; the restoration of the old screen and parcloses; with the entire repair of the fabric.

The position of the church renders it a conspicuous object from the valley of the Ribble, flowing below, on the banks of which the older part of the town is built; and when the church is finished it will crown the hill in an imposing manner.

RAILWAY PROGRESS IN INDIA.

FROM the *Engineers' Journal* of Calcutta for 1st February, we glean the following particulars on this subject:—

On the 1st of January, the East Indian railway was opened to the public as far as Mirzapore, an extension of 39½ miles. The extension commences at Mogul Serai, which is the junction of the Benares Branch with the main line, and six miles from the bank of the Ganges at Rajghât. Messrs. Hunt & Emsley were the contractors who constructed the earthwork and bridges on the Mirzapore part of the line from Mogul Serai: the stations and gate-houses are being put up by the company's engineers.

The chief engineer's report of progress on the main line of the East Indian railway, N. W. Provinces, states, that during the last half-year a further length of 56¼ miles from the Kurrumnassa River to Benares was opened for public traffic on the 22nd December, thus completing a continuous line of railway communication of 539 miles between Howrah on the Hooghly, opposite to Calcutta, and Rajghât on the Ganges, opposite to the city of Benares. A total length of 336 miles was thus open for traffic on the North-Western Provinces Section at the end of this half-year—viz., from the Kurrumnassa to Benares, 56¼ miles, and from Allahabad to Agra, 280 miles.

On the subject of average cost of lines in India and England, it is stated by the *Engineers' Journal* that on the Bombay and Baroda line the average cost was 11,000*l.* per mile, while the average cost of all railways in the United Kingdom according to the Board of Trade returns for 1860, was 33,368*l.* per mile. The land in India, however, has been supplied by the Government, and Parliamentary costs are *nil*. The number of passengers per mile of railway in 1857-8 was larger in Bombay than in Great Britain and Ireland: in the former it was 192,974. and in the latter 189,611. The total number of passengers by railways in India in 1859 was 2,822,382, of whom 93 per cent. were third-class passengers. In Great Britain and Ireland the receipts amounted to 1,112*l.* per mile for passengers, and 1,458*l.* per mile for goods. On the Great India Peninsula Railway they were only 453*l.* per mile for passengers, and 464*l.* for goods. Considering that the ordinary rate of travelling in India previous to the opening of railways was only about 10 miles a day, the change must be very great, even although the rate of speed by railway in India is as yet considerably slower than in this country. An average mixed passenger and goods train however, on the Baroda Railway, has 72 carriages and trucks, and will convey, at the rate of 20 miles an hour, a gross load of 720 tons.

An engraving of the new two-storied third-class carriage in use upon the Bombay, Baroda, and Central Indian Railway, appears in the *Illustrated News*. It was first tried in the early part of the year 1862, and has been found to be most popular with the natives, as well as economical for the company. These carriages are constructed each to carry 120 passengers,—viz., 70 in the lower story, and 50 in the upper; whilst the ordinary carriages only carry 70 persons each. More than 95 per cent. of the travellers are third-class. Two-storied railway carriages with us are impracticable; unless, indeed, on lines of railway without either bridges or tunnels.

GREAT CENTRAL ARGENTINE RAILROAD, BETWEEN ROSARIO AND CORDOVA.

THE vast valley of Buenos Ayres, or Laplata, situate between the Brazils and the Andes, embraces a breadth of several hundred leagues, and penetrates westward to Upper Peru, or Bolivia, while its numerous streams water the plains or become vehicles of commerce, developing the riches of the soil, while its healthful climate invites the population of Europe, which is rolling in and spreading itself over these prairie lands.

The railroad named above has received the protection of the Argentine Government, and of the legislatures of the provinces through which it will pass, and a concession has been granted to Mr. Wheelwright, of a most liberal character. The road commences 250 miles above Buenos Ayres, at the flourishing town of Rosario, on the right bank of the Laplata, a navigable river for ships of large burthen. The road pursues its way over a plain for 250 miles until it reaches the city of Cordova, the most central and commercial city of the Pampas. Mines of gold, silver, and copper are said to abound throughout this region.

The present undertaking, however, appears to be but the nucleus of a scheme to connect the two oceans by means of railroads, either by crossing the Andes, and descending to the Pacific through the valley of Copiapo to the port of Caldera, in Chili, which has been surveyed and found practicable, or by availing of any other mountain pass that affords still greater facilities. The next object contemplated is to extend the railroad from Cordova through the northern provinces of the Argentine Confederation to Upper Peru, and thus restore to Buenos Ayres

that commercial market which she supplied formerly by means of carts,—a journey of three or four months, but which a railway will reduce to three or four days, and probably less.

Another branch of this line will be from a station called Villa Nueva, 160 miles from Rosario, south-west through the provinces of San Luis, Mendoza, and San Juan, and uniting at Mendoza with the high road to Santiago.

The population of the provinces which will depend upon the Central Argentine Railroad for the conveyance of their foreign supplies and their products to a market, is about 800,000; and with all the obstacles with which they have to contend at present, there is a very considerable traffic between Cordova and Rosario, at which latter place may frequently be seen 1,000 or 1,200 carts, drawn by six oxen, and each carrying from two and a half to three tons of merchandise, performing the distance in a month or forty days. The facilities of a railroad will reduce it to about twelve hours; and as to passengers, it is estimated that the greater part of the inhabitants of Buenos Ayres and all the Riverini population, will avail themselves of this road, while the same thing will take place with the long isolated populations of the interior.

It seems to us an enterprise of great promise, first, from its low cost of 6,400*l.* per mile, and a guarantee of seven per cent. from the date of deposits and payments; and next, from the bonuses to be derived from the sale of lands.

BRITISH ARCHÆOLOGICAL ASSOCIATION.

At the meeting on March 23rd, Mr. T. J. Pettigrew, V.P., in the chair, Mr. Baigent forwarded an account of the discovery of human remains in excavations near the railway at Winchester. They consisted of various skeletons, the bodies of which appear to have been buried without coffins. A drawing of one of the skulls was sent, and pronounced by the chairman and Mr. Cuming to be a good example of the Saxon type. The chairman laid before the meeting the greater portions of the radius and ulna of the left forearm of a Roman lady, which some years since had been obtained from the same locality. At the wrist was a bronze armilla, which, as the flesh decomposed, fell on to the bones, to which it had imparted a deep green colour, from the oxydation of the copper belonging to the bronze. Mr. T. Wright stated that he had met with a silver ring on the finger of a Saxon lady when engaged on the interments at Osengall, in Kent. Lord Boston exhibited an alto-relievo of gypseous alabaster, a portion of the predella of an altar-piece. It presents an allegory of Life and Death, has been gilt and coloured, and is of French execution. Mr. Cuming produced a figure of similar material and execution, representing Asia, and which had belonged to a set illustrative of the four quarters of the globe. Mr. Cuming read a paper on grotesque representations of animals, and produced a great variety of illustrations obtained from abbeys, churches, and public buildings; and Mr. Clarence Hopper read a paper on two passages in the life of Bago de Clare, whose "Itinerary" had been published by the Rev. C. H. Hartshorne in the *Journal*.

REMOVAL OF HOUSES IN LONDON.

Holborn-valley Improvement.—The number of houses proposed to be taken and pulled down for the purposes of this improvement amounts to 154, containing from four to twelve and two to ten rooms each, situate in Shoe-lane, Plum-tree-court, and other courts adjacent in the parish of St. Andrew, Holborn, on the one side, and in Great Saffron-hill, Field-lane, Cock-court, Green Dragon-court, Fox and Knot-court, Hosier-lane, Turn-again-lane, and other localities in the parish of St. Sepulchre. The total number of persons to be displaced by the demolition of these localities, as far as can be estimated, is 2,216, but provision is proposed to be made by the Corporation of London to remedy the inconvenience likely to arise from such displacement by building in some suitable spot in the neighbourhood model lodging-houses.

Metropolitan Railway.—By the returns made in pursuance of an order by the House of Lords, it appears that the Metropolitan Railway Company will require 103 houses in the neighbourhood for their proposed extension to Trinity-square, Tower-hill, displacing, as far as can be estimated, 202 persons, the houses containing from three to ten rooms each; and 76 houses in Kensington for their Notting-hill and Brompton Extension, displacing 500 persons; but the promoters state that no inconvenience is apprehended to arise, as most of the houses taken will be rebuilt when the works are completed. The Great Eastern for their metropolitan station and railways, propose to purchase and pull down 111 houses in St. Botolph, Bishopsgate; 60 in Christ Church, Spa-fields; and 186 in Bethnal-green; thereby displacing 1,071 persons; and a further number of 80 houses in Bethnal-green, displacing 240 persons, under their Junctions Bill; but although compulsory power is sought to take all these houses, the company state that probably not more than a fourth will be taken in the first case, and not more than 14 in the second.

The Strand.—A number of houses in Holywell-street, Strand, the sites of which are required by the Strand Hotel Company, have been levelled with the ground, and preparations are commenced for the erection of the south front of the building, which extends northward to Wych-street, and westward to the old entrance of Lyon's-inn, Newcastle-street. The removal of the buildings on the south side of Holywell-street is in contemplation.

London Bridge Station.—The works in connexion with the enlargement of the Brighton Company's station at London Bridge are rapidly progressing. A great space of ground has been cleared for this purpose, and a further large block of houses in St. Thomas-street East and the Broadway, are now being lotted out for sale and demolition.

The East London Railway (Thames Tunnel Line).—The total number of houses proposed to be purchased and pulled down for this proposed line amounts to 970, displacing, as far as can be estimated, 6,713 persons. The property consists principally of small dwelling-houses, dilapidated larger ones, and let-off tenements in obscure courts and confined localities out east. It is stated that although power is sought from Parliament to take the whole of these houses as being within the limits of deviation, yet it is not probable that more than a comparatively small number will actually be taken, and that no provision is made for the displacement as no inconvenience is anticipated.

LONDON STREET ARCHITECTURE.

66, BISHOPSGATE-STREET WITHIN.

The building of which we here give an illustration has been recently erected on the western side of Bishopsgate-street Within, and partly on the site of an old and interesting groined undercroft, which was first brought into notice by the Rev. Thomas Hugo, and was considered by him to date from the fourteenth century. It was found in good preservation, and the foundations around, mostly of chalk, presented the greatest obstacles to removal.

The premises destroyed were very old and quaint in character, with their projecting floors, their low stories, wainscoted within, lath and plaster without, and were intermixed with other properties, and tortuous in plan and staircases. The business now carried on is known to have existed in 1783, and probably before that time; but it was found necessary to re-erect the premises with a special reference to increased accommodation required by Messrs. Fitch & Son, and sacrifice had to be made to meet this point. The frontage in Bishopsgate-street is 28 feet in width, the extreme depth of the premises 70 feet, and the height, to the ridge of the new building from the pavement, about 60 feet.

The ground and basement floors are arranged throughout for the purposes of business, with counting-houses, vaults, lavatories, and every convenience, the shop being lined from floor to ceiling with Minton's tiling, with pilasters in the flat in subdued colour, and a frieze and cornice in more positive colours, the latter being raised. Marble and beech counters and show-boards, encaustic tiling, with a Prince of Wales's feather worked in (supplied by Messrs. Maw & Co.) in the entrance, with polished granite step, and enamelled bronze shop-front, complete the finishings here.

The plan above consists of a front and back range, the former containing three rooms and the latter two rooms *en suite*, intended to be let as offices, and with a distinct private entrance. The front portion only is carried up to a fourth, or attic story, with projecting dormer windows, in stone-work; banded and cut slating, with ornamental ridging, finishing the exterior.

The front generally is executed in white Suffolk bricks and Portland stone dressings, with slabs of polished marbles of differing and contrasted colours let into the friezes of the different cornices, the pilasters being deeply moulded. The carving was executed by Mr. Nettle. The spandrels over third-floor windows have bas-reliefs, and the keystones to arches raised foliage in terra-cotta. The ground-floor front has stone pilasters at each end, with Aberdeen polished granite slabs incised and let into them, the trusses and carvings at the end being emblematical of the appointment held by the firm as purveyors to the Prince of Wales. The whole of the sashes and frames above the ground-floor are mullioned in mahogany, and glazed with plate-glass.

The interior is lit by star pendants of gas throughout, provision being made for ventilation in the sky-lights and ornamental spandrels of the shop-front.

The works have been carried out by Messrs. Browne & Robinson, of Finsbury, under the direction of Mr. Thomas Chatfield Clarke, architect; the original contract for them being 3,086*l.*, exclusive of the various fittings and some decorative features.

MEMORIAL WINDOW OF THE LATE PRINCE CONSORT.

NEWARK CHURCH, NOTTS.

A stained glass east window has just been placed in the above church, to the memory of the late Prince Consort, at a cost of about 1,000*l.* It is not intended to open it to view until Easter Sunday. The stone-work is of the fifteenth century, and consists of fourteen transome lights with tracery. The subjects chosen have been, for the upper tier of lights, the Ascension of our Lord into Heaven. In the centre light is seen the figure of the Saviour robed in white garments, surrounded by an immediate circle of flaming seraphim; beyond which extends through the side lights, a rejoicing choir of angels, who are represented on a ruby ground, each angel playing some musical instrument, and singing the glories of God. This portion of the subject is inclosed by a semi-circular band of clouds, which marks the distinction between heaven, into which Our Lord is ascending, and earth, from which the Apostles anxiously watch their Master's ascent. In the centre light is St. Peter with his keys, and next to him St. John, the other Apostles ranging through the side lights. In the lower tier of lights, the subjects are chosen from the principal events in Our Lord's life. In the centre lights is represented Our Saviour on the Cross, with adoring angels on either side. At the foot of the cross kneels Mary Magdalene, and the city of Jerusalem is seen in the distance. On the one side of the cross stand the devout women, the Virgin Mary, Mary Salome, and Mary Cleophas; and on the other side St. John the Apostle, and the Centurion. In the outer dexter lights are, in the upper part, the Adoration of the Magi; and in the lower, the Annunciation. In the outer sinister lights are, in the lower part, the visit of the holy women to the sepulchre, where they find only an angel in a white garment; and in the upper part is the incident "Noli me tangere," the appearance of Our Lord after his resurrection to Mary Magdalene. The whole of the window is executed in the style of the fifteenth century, with profusion of diaper, and elaborate framework of the medallions. The work has been executed by Messrs. Hardman & Co., of London and Birmingham.

MONUMENT TO THE MEMORY OF H.R.H. THE LATE PRINCE CONSORT, WHIPPINGHAM CHURCH, ISLE OF WIGHT.

The monument of which our present number affords an illustration has been erected in the parish church of Whippingham, in the Isle of Wight, to the memory of the Prince Consort, by Her Most Gracious Majesty the Queen.

As many of our readers will remember, this church* was recently rebuilt from designs suggested by the Prince Consort, who was frequently upon the spot, himself superintending the progress of the works, and determining upon the details of the building.

The monument is placed in an arched recess or framework of Caen stone, in the western wall

* See our vol. xix., pp. 825, 827.

MONUMENT TO H.R.H. THE LATE PRINCE CONSORT,
ERECTED, IN WHIPPINGHAM CHURCH, ISLE OF WIGHT, BY HER MAJESTY THE QUEEN.

MR. HUMBERT, ARCHITECT; MR. THEED, SCULPTOR.

of the south chancel aisle. It is the joint production of Mr. Theed and Mr. Humbert, the latter of whom had been previously engaged in the rebuilding of the church.

The upper portion of the design, executed in Carrara marble, consists of a medallion of the Prince, encircled by a wreath of laurel. Two kneeling figures, with extended arms, support a cluster of stars over the medallion, illustrative of the quotation from Revelations in the inscription below, viz.,—"Be thou faithful unto death, and I will give thee a crown of life." The spandrels of the arch are filled with foliage, carved in alabaster, on a gold ground.

The lower portion is divided into three panels, separated by small shafts of red Portuguese marble, with capitals and arches of alabaster, surmounted by a cornice, similar in character to the spandrels before mentioned. Two of the larger shafts or columns are of Greek green and two of Irish green marble. In the panels (of Carrara marble) are the arms of the Queen and Prince, and in the centre the following inscription:—

"To the beloved Memory
of
FRANCIS ALBERT CHARLES AUGUSTUS EMMANUEL,
PRINCE CONSORT,
who departed this life December 14, 1861,
in his 43rd year.
'Be thou faithful unto death,
And I will give thee a crown of life.'
Rev. ii. 10.

This Monument is placed
in the Church erected under his direction,
by
His broken-hearted and devoted Widow,
Queen Victoria.
1864."

LONDON STREET ARCHITECTURE: 66, BISHOPSGATE STREET WITHIN.
MR. THOMAS CHATFIELD CLARKE, ARCHITECT.

THE SPIRIT OF GOTHIC ART.*

All art is symbolic, and symbolism is the life of all art. In true art, symbolism never detracts from the reality, nor sets aside the end in view. Thus a Christian church is reared for the worship of God, and no symbolism can set aside that end; the great truths of Christianity are conveyed to us in symbols, its praises are sung in symbolic language by the lisping infant, as well as the hoary saint; much of its prayer is uttered in symbolic phraseology; the most beautiful and soul-stirring portion of modern preaching is indebted to allegory for much of its charm and fire. Turn we to the Bible, and we find it full of symbolic language.

What allegory is there in the world of letters equal to the Song of Songs? That learned German, Schlegel, says, that "the prevailing spirit of types and symbols so conspicuous in the Scriptures,—not alone in the poetical, but even in the didactic portions, has deeply implanted and widely extended its influence over the whole thoughts and imagination of the Christian peoples, and not alone these, but also over their imitative arts." What Homer did for the ancients and pagans the Bible has done for us, that is, is become a fountain from whence we draw the model of our images and figures. "It is true, that in cases where the deeper sense of symbolical mysteries was mistaken, or where the purpose which the figure had been intended to serve was of a nature less serious and sacred, this spirit has not seldom displayed itself in the corrupted form of idle and fantastical allegory; for loaded ornament is at all times of easier attainment than native grace; and the most brilliant display of art is a thing more common place than the deep gravity of truth."

Now it must be distinctly understood that Christianity is a thing which can never of itself be allegory, philosophy, or poetry, or art of any kind, but rather the groundwork of all these. Apart from Christianity, these would represent the forms and shadows of that antiquity whose spirit and life are gone, for the deep philosophy of paganism, as well as of Jewism, had ceased to pulsate ere the founder of Christianity appeared.

True art was becoming effete, and required some new direction for its impulses: this it found in Christianity, and its influence upon art has been the surest and most successful; therefore it is, that in Christian or Gothic art symbolism attained a luxuriance and pliability never before acquired. Symbolism was not an after-thought of the artists, but it appears to have arisen synchronously with the art itself in the minds of the artists, as will appear from the "Apostolical Constitutions:"—

"When thou callest an assembly of the church, as one that is the commander of a great ship, appoint the assemblies to be made with all possible skill; charging the deacons as mariners, to prepare places for the brethren as for passengers, with all care and decency. And first, let the church be long, like a ship, looking towards the east, with its vestries on either side, at the east end. In the centre, let the bishop be placed and let the presbyters be seated on each side of him, and let the deacons stand near at hand, in close and small garments, for they are like the mariners and managers of a ship." I am afraid these "Apostolical Constitutions" smell rather fusty, nevertheless there is a very beautiful figure employed, for the reference is to Noah's Ark, in which a remnant of the old world was saved.

We may find symbolical allusions in many other patristic writings. St. Ambrose tells us why baptisteries should be octagonal, and Clement of Alexandria gives rules by which the selection of sacred emblems should be guided. Eusebius informs us that Constantine surrounded the apses of the church of St. Cross with twelve pillars symbolical of the twelve founders of the Christian religion; and Hermas, in his visions, represents the building of the spiritual temple under figures wholly taken from the material fabric. Thus the symbolism of art is not, as some have termed it, a new-fangled idea, borrowed from the papacy. Now, suppose it were so, is that a good reason for rejecting any good idea because, forsooth, it comes from the papacy? If a thing be of itself *good*, it certainly can be none the worse for emanating from that sanctum.

Mr. Poole says "that ecclesiastical art is a language; that it has always, so long as it has deserved the name, aimed at expression, and not at mere accommodation without splendour, or even at splendour without a spirit and a meaning; that from the first it was rational; that it had a soul and a sense which it laboured to embody and convey to the beholder; that its language was not only expressive, but appropriate; that it aimed not only at accommodating a congregation, but at elevating their devotions and informing their minds."

It is a fact beyond dispute, that the greater mysteries of our religion are not only capable of, but are in very deed symbolised in the fundamental design of the structure; and not only these, but other Christian verities are set forth in the minor arrangements and in the ornamental details. Thus, we may safely conclude that from the first there has been a sufficient degree of uniformity in Christian temples to indicate a unity of design which could not be accidental. A Gothic temple, in its perfection, is an exposition of the distinctive doctrines of Christianity clothed upon in a material form. It is, as Coleridge happily expresses it,—

"A petrifaction of our religion."

We have already shown that allegory is an instinctive portion of our being, and that symbolism was not invented by the Gothic artists, but that it has in the matter of religious art existed in all time among men; and that it is also found strongly exhibited in the history of creation.

In the old world men were very fond of expressing not only great ideas, but also lesser ideas, by means of symbols, and these symbols had a universal meaning, known and read by all men: it would then have been strange indeed if these had been ignored in proportion as the Hebraic ideas of the Infinite shone forth. How often are truths or ideas spoken of in holy writ under the forms of the lion, the bull, the eagle, and man. Yet these figures are very common on the Assyrian marbles, and were used by the Assyrians as symbols, and signified the same ideas,—omnipotence, creative power, omniscience, and wisdom. In Gothic art we find the same symbols employed, not only with the same signification, but with a wide scope: thus St. Mark is typified by the lion, because his Gospel begins with the roaring of a lion in the desert; St. Matthew, by the angel or winged man, because he begins his Gospel with the genealogy of Christ; St. Luke, by the ox or bull, because such was one of the victims in the Jewish sacrifices, and he begins his Gospel with an account of the priest Zecharias; St. John, by the eagle, because he took a bolder flight than the other Evangelists.

In the catacombs of Rome there are, as we all know, numerous symbolic representations, which the poor prisoners in the early days of Christianity carved upon the walls, before Gothic art, or what we denominate the Papacy, had any existence,—in the halcyon days of the early and pure Christianity.

We have already referred to some of these, as gotten from Pagan mysteries; but great numbers of them are gotten from the Bible. How natural is it, then, that the same symbols should be found in Gothic art, obtained from the same source, and certainly not from the catacombs?

Christ is often represented by the first two letters of the word in Greek, ΧΡ, or by the first and last letters of the Greek alphabet,—alpha and omega, Α. Ω. The palm is very common, being significant of the martyr's victory. The dove carrying the olive-branch—the emblem of salvation. The palm and the dove and olive-branch were common amongst the Pagans, and signified almost the same,—Victory and Peace. The fish, too, is very common, being emblematic of the Christian, from Christ's words to Peter and Andrew,—"I will make you fishers of men," and for other reasons.

The anchor, too, is often used, and is a very significant symbol, being emblematic of Hope and of Christ. The vine is also a very common symbol, for what reason, and of what emblematic, must be evident to all. Very singularly the Pagans took no offence at this emblem, because it was common among themselves, and fancied they saw in it the worship of Bacchus. The lamb became also the symbol of Christ, taken from the words, "He was led like a lamb to the slaughter."

The earliest human figure employed in Christian art is very appropriate, being that of a shepherd, typical also of Christ. Sometimes in Gothic art, he is represented as carrying a lamb on his shoulders.

It was not until the eighth century that the greater mysteries,—The Passion and Death of Christ,—began to be represented. One of the earliest of these is very beautiful in idea: it shows a cross, at the foot of which are seated two Roman soldiers; one asleep, leaning on his shield; the other watching, with eyes raised towards the cross, in devout emotion. The monogram ΧΡ, the symbol of Christ, is placed above the cross, surmounted with a crown of laurel-leaves, at which a dove is pecking. Anything more beautiful than this, as a Christian allegory, it would, I think, be impossible to imagine.

It does not appear that any attempt was made to depict the Deity in a work of art, under a human form, for the first eight or nine centuries; the honour of that wretched idea belongs to more modern times than the carvings in the catacombs. The earliest symbol of the Deity dates about the sixth or seventh century, and then the symbol was nothing more than a hand issuing from a cloud.

Passing from the catacombs to the temple sacred to Christian art—

"Where through the long-drawn aisle and fretted vault,
The pealing anthem swells the note of praise,"—

we may observe that in the plan, Christ was figured in various ways; the choir was inclined to the south, to signify that He bowed His head and gave up the ghost. The nave represents the body and the sides which one of the soldiers pierced, considered to be the south, and is constantly the pulpit from which the faithful were reminded to look on Him whom they have pierced.

For the same reason the south was considered the most holy. The Old Testament was represented on that side, while the New Testament and the local or national Hagiology were placed on the north.

The same opinions still give value to the south side of the churchyard for burial.

At the head of the cross was the chapel of the Virgin, at the fountain of intercession with her Son. At the foot the west end—was the parvis, supposed to be a corruption of Paradise,—that happy station from which the devout might contemplate the glory of the fabric, which was chiefly illustrated in this front, and whence they might scan the great sculptured picture, the calendar of the history of the church, illustrative, too, of Christian doctrine. Three large porticos leading into the church were adorned with statues of the Apostles and holy men who marshal us the way we should go. In front is seen the genealogy of Christ, the history of the patriarchal fathers, and the final judgment.

We are all pretty well acquainted with the aureola or nimbus, so commonly shown around the heads of saints. It denotes rest under the shield of God. This symbol was used by Pagans around the heads of their gods and heroes. The Trinity has its special nimbus. For God the Father it is triangular, or sometimes square, denoting the four elements, earth, air, fire, water. Sometimes the triangle is united to the hexagon, this hexagon denoting among the ancients the four elements. The nimbus for God the Son and the Lamb has three rays, and there are also three rays for the Dove of the Holy Spirit.

The upward aspiring tendency of Christianity is beautifully signified in the tower and steeple shooting up into the clouds. The progressive life of the Christian is shown as the eye ascends from pinnacle to pinnacle, on to the spire which conducts it heavenward. This steeple or spire is one of the most characteristic features of Gothic art. Towers as addenda to temples for worship may date back to Babel. The propylea of Solomon's temple was nearly 200 feet in height. They were common to most Eastern nations, but they were for the most part unseemly affairs, calculated to awe, rather than inspire with hope, as does the aspiring spire that forms the crown of Gothic art.

What can be more appropriate than the cock of Peter surmounting the vane, reminding the beholder with every breath of heaven the necessity of truthfulness? The zephyrs waft down to us every morning the weakness of humanity, and gently whisper in our ears, Be true! There is also something peculiarly charming in the voices that usually issue from these spires. Who would be without the bell, which ever says,—

"To call the folks to church in time,—
I chime;
When mirth and joy are on the wing,—
I ring;
When from the body parts the soul,—
I toll!"

It is thus we must read our Gothic art, and

* See p. 173, *ante*.

such or similar thoughts must arise at the bidding of those who really care to awaken them; and so

> —"Shall memory often in dreams sublime
> Catch a glimpse of the days that are over,
> And, gliding, look through the waves of Time
> For the long faded glories they cover."

I have been induced to enter somewhat largely into the question of symbolism, not only because it is the life and soul of Gothic art, but because many erroneous ideas are very prevalent respecting it; many well-meaning people, for instance, cannot detach it from what they call "Popery;" whereas, though *in* it, it is not *of* it; all history declares that it did *not* give birth to it, but that it found it in being, and naturally adopted it; for the very nature of all religion will compel men, in some shape or other, if not in stone, in words, to use symbolism in their worship: and where is the difference? It must solve itself into a distinction without a difference.

It is philosophically and æsthetically right that the temple should be a Bible in stone—a lasting witness of the Christian religion; that the walls should eloquently express to the mind, through the eye, the living ideas of the resplendent beauty and perfections of Him whom we worship; for the eye is as sacred a channel to the soul as the ear, and ought to be accustomed to the same exalted usage. The ancients, both Jews and Pagans, felt that the gods should neither be hymned in the common language of life, nor worshipped in a hut: could Jove thunder from a hovel, or would the Shekinah illuminate a barn? No! Should we not rather—

> "Make the house where gods may dwell
> Beautiful, entire, and clean?"

Should not the walls blush with lessons deep and profound for the beholder, without the stigma of idolatry being gratuitously attached? There is a great distinction between that which *withdraws* the mind from devotion, and that which turns thought inwards and upwards, and "Excelsior for ever!" and that art can have such an influence on the mind cannot be denied,

Let it not for a moment be supposed that we wish to make an apology for the unblushing paganism and naked prostitution of art so often seen in continental and peninsular temples,—paintings which must fill every rightly-constituted mind with disgust and horror! and when not these, often with the most deep-felt pity. It is not true, as is often asserted that "art is admirable, however it is represented," for whenever art becomes a vehicle of torture, either to the feelings or the mind, then it is art no longer, but an abortion; and any body politic which makes use of such to impress the minds of the unlearned and ignorant ought to be denounced as degenerators of the human race. It is on this ground, chiefly, and not so much on religious grounds, that we consider the fusty Catholicism of Rome to have been a ban, not only upon true art, but upon the progress of the peoples; for prostituted art can only act as a blight upon any people. The greatest of painters, such as Giotto, Paul Veronese, and others, have been employed in puerilities and the grossest absurdities. Let us notice a few of them. At Milan, we have a sibyl teaching the Emperor Augustus the mystery of the Incarnation; in a church in Venice, the host, attracted by the fervent faith of St. Theresa, is shown as flying of its own accord into the open mouth of the saint; in the Louvre, is a painting representing St. Francis of Assisi preaching to birds; at Rome, St. Anthony is shown preaching to fishes; at Padua, the patron saint of the town is shown convincing an atheist of his error by a little bit of legerdemain, such as throwing a glass from the roof top, and instead of breaking it splits the marble pavement. Such are some of the puerilities. In the Romish Vatican is a painting by Poussin, representing the martyrdom of St. Erasmus, with his body cut open, and the executioner pulling out the intestines and winding them on a windlass; moreover, the clergy have had this exquisite piece of torture done in mosaic, to display it to public view in St. Peter's! Another painting represents St. Lucy as offering to God, upon a trencher, her own eyes torn from their sockets; and St. Agatha as offering unto Him her severed breasts. In the Church of San Stefano Rotondo, one of the most interesting in the Christian world, as it is supposed to have been erected so early as 467 A.D., the compartments formed by the intercolumniations are filled with representations of martyrdoms, the most hideous imaginable. Indeed, to recount them is too sickly. The most recondite study of horrors must have been necessary, in order to cover the walls of the church with such ghastly spectacles,—an outrage against humanity, a stinging disgrace to art!

The French poet Lemierre has nobly denounced this prostitution of art, where he says,—

> "In these temples of peace
> What do I see upon the walls? The most fearful objects;
> The rage of tyrants, the ingenuity of crime,
> The rack, the pile, the blood of victims,
> And everywhere twenty executioners for one Christian hero!
> Oh! had Heaven this day
> Joined the palette to the lyre in my hands!
> I would go this moment, I would go into the sacred places,
> And wipe out from their walls the blood with which they are stained,
> Those arenas of horror, those barbarous scenes
> Made for the eyes of Neros, yet displayed in our churches.
> Blind painter! while you offer me those savage pictures,
> What virtue can your pencil inspire?"

Very often every kind of positive indecency is seen, such as the martyrdom of St. Agatha, paintings of the Last Judgment, disclosing scenes of the most disgusting character, calculated to debase rather than raise. Michelangelo did very much of this kind of thing. An anecdote is related of him, to the effect that in order to punish some dignitary who had remonstrated with him, and to the Pope, he represented him naked in hell, furnished with those peculiar long ears known as Midas's, and encircled with a serpent. Of course this irritated the dignitary still more, who again complained bitterly to the Pope; but Angelo remarked, "His Holiness cannot interfere; for his right to rescue sinners from purgatory does not extend to hell!" Now it is evident such art as this withdraws the mind from devotion. Gothic art does not call for such unseemly exhibitions: they are only evidences of a very debased and Paganistic Christianity. True art clothes herself in suitable drapery, and makes her symbolic representations such that they shall educate and refine, and therefore attract. But it is said,—"Is there not danger of running into the extreme? And if there is such danger, would it not be better to leave it alone?" To which it might be answered,—Is there not danger in eating and drinking, seeing that so many run into extremes? No; depend upon it, the instincts of art are implanted in man to be used, —used as all other good gifts are, not for unlawful, unhallowed purposes, but for the highest good and pleasure of the recipients,—used in such manner that the Giver of all Good shall alone be glorified.

It is also said that the Christian system is of a purely spiritual nature, and does not require such aids. True: religion, *per se*, does not require any human aid at all; but the recipients of it are none the worse for such aid. Although forms were enjoined under the old dispensation, these forms were not religion, but only the aids to it; whilst the religion itself had to do with the same Being as now, and was no less spiritual in its nature than that religion which we profess. Only one temple in the history of the world can claim divine instruction for its construction and decoration, and this latter was of the most gorgeous and costly description, in which the art-spirit, as far as then known, may be said to have exhausted itself. The plan, the elevation, and the details were all symbolical of some truth: in fact, the whole seems to have been the most perfect symbolic poem in a material form ever reared.

Surely if there is anything at all in the force of example, here is enough to silence the most stolid anti-symbolists for ever. If the introduction of the art-spirit into the temple was pleasing to the Deity then, surely it cannot be otherwise now, seeing that God knoweth no change.

Now, there can be no question that the application of these symbolic principles is as possible with the Classic as with the Gothic art; but the effect produced is different. In the latter the scope is greater and more elastic, and the spirit of the art is in rich union with the new religious principles from whence it sprang; therefore it is but natural that Christian symbolism should find a more congenial home in the Christian art,—in the Christian temple,—

> "There! within the holy walls,
> —Look up and unto thee
> The stones shall soothly speak,
> In voices low and meek,
> As murmurs of the sea;
> Everlastingly and deep,
> To thy inmost soul they creep,
> Beguiling thee in tears to weep
> For thy sin and for thy sorrow,
> Making holier the morrow,
> And teaching thee in stillness to find
> Purity and peace of mind."

Thus we are obliged to admit the fact that, in Christian art, symbolism attained a luxuriance never before acquired. Planned upon the cross, and reared towards heaven, emblematic of the hopes and aspirations of the human race; its triangular details typical of the mysterious Trinity; its vertical lines reminding us of the resurrection; the windows symbolical of the Light that has come into the world; the various sculptures all pregnant with symbolic truth, have all a deep and solemn meaning. We see the mathematics of art giving way to the poetry of nature; we look upward where before the eye glided earthward. The spirit of beauty, which had before given life to the recumbent, now soars in the erect. Instead of the spreading dome of the Pantheon, making

> "The base earth proud"

with bearing it, we have the "cloud-capp'd towers" and soaring pinnacles seeking communion with the skies. Indeed, I

> —"Love the high embowed roof,
> With antique pillars massy proof,
> And storied windows, richly dight,
> Casting a dim religious light,"

for the rich associations they call up. Yet I do not love a dim religious light. Oh, no; for the pleasant sunlight is all revivifying in its tendencies, and lightens up the soul as well as the body. Let us, then, have light! beautiful light!

> "Holy Light! offspring of heaven first-born!
> Light
> Ethereal—first of things—quintessence pure."

Gloom is not fit for man, or beast, or vegetable. Why, then, should we have in our temples the murky, reeky, steamy atmosphere of the carboniferous age, when there was deep gloom in the recesses of the thick woods, and thick fog winded its way up and athwart the valleys of the period? Let us remember that in proportion as the full blaze of the sun's rays penetrated the darker recesses of the dense woods, and danced upon the sparkling wave, so came progress in all life. *Out* upon the mawkish sentimentality that would raise melancholy feelings of repose by the sombre gloom, and "dim religious light" forcing us to dream instead of think! Let us have light, to lighten the gloom, for God saw in the beginning that it was good. Gothic art does not call for "dim religious light," nor for devils in stone and paint, nor mythical monsters,

> "Gorgons, and hydras, and chimeras dire,"

but rather for pure majestic beauty, chastity of design,—a sacred elegance, a holy grandeur; and these are emphatically characteristic of Gothic art. How excellent the feeling that was concerned in bestowing life on the otherwise barren and gloomy walls! There is an ethereal chord—a golden link between the human heart and the beauty of the art-spirit; there is a magical power to enchain the mind in the web of enchantment, in beautiful forms and colours, the more especially when these are expressive of some great truths, for Beauty dwells on earth, the heaven-sent mistress of Truth and Good, and under its influence we are attracted towards the Deity, as the loftiest symbol of unchanging and imperishable Beauty; and art is only great and excellent when it glorifies the Almighty Architect of the universe—of the innumerable systems of the infinite deep of heaven.

A very unsavoury impression is prevalent in certain quarters,—that Gothic art is something akin to Popery! I do not think it is possible for anything to be more absurd, seeing that it is contrary to authenticated history. The papacy has always nourished with great preference pagan art, which perpetuated human feelings rather than the divine, which last is the chief peculiarity of Gothic art. Although it may be perfectly right to say that there is a difference between the sky mirrored in the Cephissus and darkened in the Thames, and therefore to assert the greater appropriateness of Gothic art in northern climates, especially for ecclesiastical purposes, yet it is *not* right æsthetically to call Christian art superior to the Classic, or the Classic to the Christian, for in many respects each is superior to the other. Both are embodiments of chaste intellectual majesty, of beauty, sublimity, and grandeur! The one is a grand epic poem, the other equally grand in its poetic imagery, rythmical consonance, and a good deal besides. Expression is one of the grandest features in art; for ecclesiastic purposes, nothing is so apt and expressive as the Gothic. For festive purposes, what so expressive as Roman Classic? What can be more

expressive for legal or municipal purposes than the chaste Grecian Classic? For military or punitory purposes, what so apt and expressive as the Tudor?

Strictly speaking, there are but two classes of art,—Classic and Pagan, or Gothic and Christian. This brings to mind a circumstance which occurred in Scotland, as related by Dr. Payne. A church being about to be built in the Gothic style, occasioned one of the congregation to say to the minister, "Sir, I am sorry our new church is to be built in the Papist style of art," drawing at the same time a tremendously long face. "Why," replied the minister, "what are we to do? We *must* either have the Papist or the Pagan style, for really there is no other in the realms of art." The objector was thereupon readily reconciled.

It is of no service using the art of rhetoric to destroy the singular and beautiful appropriateness of Gothic art, for every word will become a weapon that must slay the wielder; for the spirit of truth which breathed itself over the divine creations of pure Gothic art is of a nature calculated to kindle the loftiest emotions and to instil itself into every generous mind. It requires no vague tradition or dreamy hypothesis to give it enchantment. Sufficient it is, that its tiara of proud towers, its lofty pinnacles soaring spires, and gilded vanes, looking only grander and bolder amid the surrounding vapour of our climate, seeming to wave simultaneously like fire-flags in the breeze, and flashing over the mist in the first tide of the upper sunlight, and, as it were, lighting its way adown the dark perspective, produce a fairy and magical effect; and under the influences of the varied and matchless splendour of Gothic art we cannot but be attracted towards Him who is the perfection of all beauty, and the source whence flows in uninterrupted succession all those varied gifts which enlighten and sanctify the soul.

"For Him, ye pillars, rear your brows on high!
Lift up your heads, great portals of the sky!
What fairer dome, save that which heaven expands,
What worthier seat of temples made with hands,
Have builders sage here pillar'd for His throne!
For nature's God, a work like nature's own?
Or where unlike the forms her hands produce,
Still like the grace, magnificence, and use?
In new designs her fair proportions shown,
Her likeness traced in structures not her own;
Her measures follow'd, harmonies bestowed,
On strange materials in an unknown mode.
And half her influence o'er the mind impress,
By different means, and thence with livelier zest.
To raise up columns from the marble mines,
Embower the boughs, and interlace with vines;
Rise higher still, and arch a vault on high,
To shield the storms, and emulate the sky;
Cross aisles to vistas of her sylvan bower;
Rear for the sun on earth a lantern tower:
Adapt each limb with various height and length,
And build the whole in unity and strength;
Copying abstracted, in a different plan,
The grace and order of the world and man.
And scarce with rapture less, and awe confound,
And lift to God the wight who gazes round,
Than who beneath a cliff sees capes and bays,
Far tinged with sunset's red and yellow rays,
Or nightly wandering hears the hills accord,
And heavens declare the glory of the Lord."

Francis Drake.

CAUSE AND EFFECT.

The sanitary statistics which come to hand not only from the metropolis, but from many parts of the provinces, are very satisfactory, and show that the salvation of human life is as certain to follow sanitary improvements as the daylight is to follow the darkness. Valuable as are these wholesale figures of life and death, it is no less useful to watch isolated cases; so in addition to those which we have at different times laid before our readers, we will give another instance of the advantage of good air and right management of food.

About three years ago a respectable high-class artisan lost his life by the upsetting of a boat upon the Thames, leaving a widow and three little girls: afterwards a boy was born: the children were delicate, and there can be little doubt that they inherited a consumptive taint. After the death of the father circumstances rendered it necessary to remove to part of a small house situate in the north of London, one of the old-fashioned dwellings planted on the soil. The rooms were unventilated, about 7 feet by 8½ feet in breadth and length, and very low: the drainage was deficient: three families occupied four rooms: in fact, there were in this house all the means of destroying health that are but too common. The consequence was, that disease began to develop itself amongst the children: the eldest girl seemed hopelessly ill, when a successful attempt was made to get her elected a scholar of the Royal Caledonian School.

It was with great difficulty that a surgeon could be found who would give such a certificate of health as would enable the child to obtain admission into this excellent institution: one medical man, taking into account the possible effect of change of air and diet, gave the needful document.

From the time of her admission into this school, the alteration, for the better, in this little girl, was remarkable. Week after week she increased in health and strength; and by the end of six months no one who had known the child at the time of her admission would have recognised her. Nor is this to be wondered at when we consider the spacious dormitories, the large well-ventilated school and dining-rooms which are provided in this institution. There is also care taken of both in-door and out-door exercise; warm and comfortable clothing is provided; and an ample supply of plain but wholesome food, which is served at regular intervals.

We glance from the school to the home of the other children, and find the contrast most painful. The state of health is shocking; swollen glands, and other symptoms of a painful kind, with which the physicians of the Ormond-street Child's Hospital find it difficult to deal. Medicine is of little account: what is wanted is pure air.

COMPETITIONS.

Hull Exchange Buildings. — Twelve designs were submitted in competition for the above, and the directors have awarded the first premium of 50*l.* to that marked "*Bonâ Fide*," by Mr. Wm. Botterill, architect, of Hull; and the second prize, of 25*l.*, to that marked "*Per ardua*," by Mr. H. Fuller, architect, of Manchester and London.

The proposed New Church at Ashford, Kent. Forty-eight sets of designs have been sent in for competition for this new church, and they will be exhibited at the public rooms, Ashford, on Thursday, Friday, and Saturday in this week.

Hackney Town-hall. — Mr. Sancton Wood writes,—As you have announced the fact of my having been awarded the premium in the above competition, may I beg you will have the goodness, for the benefit of your readers, and as a warning to those who may be again invited to send in designs, to allow the following letter to appear, which was addressed by me to the committee on my being requested to compete a second time for the same work:—

"Gentlemen,—I was much surprised to receive from your vestry clerk a second invitation to compete for your town-hall, for such a proceeding is, I believe, wholly unprecedented.

Architects do not compete for the trifling premium which may be offered, but for the execution of the works contemplated.

My design was the one selected as the most approved; and if a greater expenditure were to be agreed upon, or any alterations or amendments of the design required, I consider that I have established a right to be employed to make them; and I will challenge the opinion of the profession and the public as to whether I was not fully qualified by position and experience to become your architect. Any other decision is a reflection on my professional character.

I cannot consent to compete again; and if the others do accept your invitation, I do not consider they know what is due to themselves or their profession.

If I competed again and were successful, what guarantee have I that the same thing would not occur again? for it must be that some one else is wanted to be employed, and not myself, or otherwise, in justice, I should now be employed."

Hereford.—In a limited competition for a new church at Tupsley, near Hereford, to seat 500 persons, there were four competitors, viz.—Mr. W. White, of London; Messrs. Elmslie, Franey, & Haddon, London, Malvern, and Hereford; Mr. T. Nicholson and Mr. F. R. Kempson, of Hereford. The committee resolved upon referring them to the Oxford Architectural Society to report thereon, whose preference being in favour of the No. 1 design, submitted by Messrs. Elmslie, Franey, & Haddon, the committee accepted it, and appointed them to carry out the works.

THE ARCHITECTURAL ASSOCIATION.

The ordinary meeting of members was held on Friday (the 18th ultimo), at the House, in Conduit-street.

The chair was occupied by the president, Mr. T. Roger Smith.

Mr. F. Atkinson, of No. 25, Montague-street, Russell-square, was on ballot elected a member of the Association.

The honorary secretary (Mr. J. D. Mathews) read a letter which had been received from the directors of the East London Banking Company (Fenchurch-street), in reply to a communication on the subject of the competition for designs for the new banking premises proposed to be erected by the company, in which the directors stated that, however much they might have been disposed to acquiesce in some of the suggestions offered, time would not now admit of their so doing!

Mr. G. R. Wigley then proceeded to call attention to the subject of Romanesque architecture. He observed that he was much indebted to his friend Mr. Doan (formerly a member of the Association) for the use of a very valuable collection of water-colour and pencil drawings, engravings, photographs, and plans of many of the most interesting examples of the Romanesque school. Adverting to these, he remarked that the starting-point of Romanesque was, of course, classical. The erection of Constantinople, and the concentration of Greeks in that part of the world, led to the development of ancient Grecian types; but these soon grew into all sorts of whimsical designs, so that, soon after the period of Justinian, what might be termed a complete innovation was established. The pointed arch, for instance, came in at that time, and had remained, ever since, the distinctive feature of the Gothic school. The Eastern school of Romanesque was not confined to buildings to be found exclusively in Europe, but included buildings which had been constructed under European influence. The basilica of Bethlehem was, for instance, a fine specimen of this period, as was the Church of St. Peter in Chains, at Rome. The next earliest specimen of the basilica was that of St. Mary, at Jerusalem, which was now a mosque, and which, although subjected to the repairs of many ages, was still a very interesting type of the early Christian church. It was, no doubt, built by Justinian, and in his opinion was originally furnished with an apse. Mr. Fergusson had some time since expressed a very positive contrary opinion at the Institute of British Architects, but it had been subsequently proved not only that there was an apse, but that records of it still remained. It was destroyed by fire in the eighth century. Regarding the apse as the main feature of the basilica, it might be well to consider what was the real definition of the word basilica. He believed that it was not the development, but the prototype, of the Christian Church. In the original acceptation of the term it was the hall of a Roman mansion, and was termed the Noble Hall, meaning thereby the best apartment in the house. It was generally distinguished from all other halls by having the oriel or semicircular recess. In baronial halls in England the oriel was generally at the side, but with the Romans it was at the end. Originally the Christian worship in the mansion of a noble was conducted in the chief hall. The apse at the end contained the sanctuary, and there the priests performed the divine office, while the remainder or body of the hall was set apart for the worship of the crowd. Another feature of Romanesque architecture was that the arch was not placed directly on a column, but rested on a block of stone which surmounted the capital. Another feature was the introduction of several orders of columns one upon the other. A small specimen of this combination was to be found in the Church of St. Lorenzo, outside the walls at Rome. This grouping of shafts was also observable in the cloisters of the Church of St. John Lateran, and of St. Paul, outside the walls at Rome. Having referred at some length to the baptisteries and cloisters of Romanesque churches, and pointed out with the aid of drawings and plans the peculiar features of each, Mr. Wigley concluded his essay by expressing the gratification he felt at revisiting the Association after a lapse of fifteen years, and finding it maintaining a healthy and useful existence.

The Chairman observed that it would be desirable if those engaged in designing Protestant churches would take the basilica for their model. It would also be found a great improvement upon the square room which generally constituted a Dissenting chapel. There was much in the basilica that was grand, simple, and dignified, and it might be built without much elaborate work or rich materials. The apsidal termination was, in his opinion, an excellent arrangement for the east end of any church. That its value was recognised many years ago was proved by reference to the lately-restored

church in the White Tower in the Tower of London, which had an apse instead of a chancel. The discontinuance of the apse in subsequent centuries was perhaps to be traced to some ritual observance inconsistent with its maintenance.

In reply to questions,

Mr. Wigley observed, that the remains of but few basilicas were to be found at Pompeii, owing no doubt to the circumstance, that the city was a pleasure town to which the Cockney Romans repaired in their summer, just as we did to Ramsgate and Brighton. The most interesting remains of early Christian architecture in the East were, however, to be found in the mountainous parts of Syria, where the wreck of upwards of 150 cities, extending over an area of 40 leagues, might be observed. They had been deserted by their inhabitants at the period of the Mahomedan invasion; and it would seem that the population, having found safety in the plains, never returned to repeople their abandoned towns. Here might be found traces of opulent artistic life. Wine-presses, cellars, kitchens, stables, baths, and churches with columns, flanked with towers, and surrounded by tombs, crosses, and inscriptions on the monuments yet remained. The monograms of our Saviour were repeatedly met with, and there could be no doubt but that the people were in the enjoyment, not only of the Christian religion, but of advanced social civilization. These cities were all abandoned on the same day; and, were it not that the buildings had suffered from the ravages of earthquakes, nothing would be required to restore them but the wood-work and the roofs.

A member inquired whether Mr. Wigley had discovered, in any of the basilicas which he had visited, any instance in which the apse was lighted from above in such a manner as to throw a strong light upon the sanctuary.

Mr. Wigley replied, that he had not been able to trace any such case. The system seemed to be quite modern. He also stated that, with the exception of pontifical chairs, he had not found any instance in which stone stalls were placed in the apse.

After a short discussion, in which Mr. Bain, Mr. Harris, Mr. Ridge, and others took part, a vote of thanks was passed to Mr. Wigley, and also to Mr. Dean for the use of his drawings, sketches, &c.

THE PROPOSED DECORATIONS IN ST. PAUL'S CATHEDRAL.

ENGLISH OR FOREIGN?

A LETTER in the *Builder* of March 19th, signed "B.," was so obviously directed against a recent article of mine in a weekly journal, that I am constrained to appeal to your sense of fair play to allow me to reply to it. Sentence after sentence, clause after clause, were plucked from their qualifying context in my article (but without the usual signs of quotation), their meanings were perverted, and then the changeling arguments were refuted.*

I beg to assure you, sir, that I have not "appealed to national and religious feeling in such a way that it may check the contributions of the public" towards the proposed decorations for St. Paul's. On the contrary, I have expressed a fear lest the course pursued in the employment of foreign artists might lead to the very consequence I am charged as "likely" to produce. I submitted that the public must be credited with certain patriotic sentiments—"prejudices," your correspondent calls them—which might be wounded on learning that foreign artists were called in to decorate our English metropolitan cathedral, "the last resting-place of our British artists, past and to come." I might have added, as another reason for the inexpediency of the choice, that the majority of the public are unfamiliar with the merits of the foreign artists selected. Again—and always with a view to the subscription-list—though your correspondent says that M. de Triqueti and Professor Schnorr† are Protestants, it may fairly be assumed that to the mass these artists will, as foreigners, be "presumably Roman Catholics." To avoid the least appearance of injustice, I announced some weeks back in the journal in which the article in dispute appeared, that the modeller of the bas-reliefs for the doors of La Madeleine, in Paris, is a Protestant.

The first premiss being essentially untenable, the second charge, in so much as it is founded on it, namely, my "injustice towards the foreign artists and the committee who selected them," at once falls to the ground. The grand "injustice" I wish to see avoided is towards the artists of our own country, and the future of British art. As regards the committee, a "knowledge," says your correspondent, "of the gentlemen composing it might of itself be sufficient to acquit them of any undue partiality to foreigners." But no one charged them with undue partiality. It is the inconsiderate and precipitate employment of foreigners before our own artists have had a chance or trial of any kind that is to be deprecated. Who are these infallible authorities, and why should this mixed committee necessarily redeem the character which has unhappily attached to almost every other? Why should it be preferable to the committee of Royal Academicians which I myself proposed? I know that some illustrious church dignitaries are on this committee, but is it not highly probable that their opinions and those of other members will be guided by the cathedral surveyor, who is understood to have long favoured a particular scheme of decoration? A well-known and able architect this gentleman, of course, is; and it is not to be supposed that he would recommend anything without having the best intentions; but why was he not from the first openly and avowedly assisted, and the public also taken into the confidence of the committee, as in the case of Sir Charles Barry and the mural decorations of the Westminster palace? Your correspondent says, that it "would seem only fair that the committee should be permitted to carry out their work in their own way and unmolested, until the public shall have an opportunity of estimating their capacity in the choice of artists by the promised exhibition of the model of the choir." But it seems to me only too probable, that to invite public opinion then will be a mere mockery. Unless I am entirely misinformed, M. de Triqueti's design for the apse mosaic has been accepted for execution in the model, and he has been commissioned to prepare designs for the mosaic below the east windows also. And no conditional acceptance is pretended in reference to the commission given to Professor Schnorr, for the designs for all the painted windows at present contemplated for execution. Does not all past experience tend to the conclusion that these designs will not be set aside? Yet how many public monuments might have been a pride instead of a reproach if public opinion had been called in in time. Is it not the duty, then, of every writer charged with the interests of art and the public, to endeavour to procure the earliest publicity for designs proposed for every national work? And such this is admitted to be by the proposed national subscription.

The next false inference is drawn from my remark, that "our glass painters have hitherto distinguished themselves chiefly in works of a Gothic and Mediæval character, which would not harmonize with the style of the cathedral." This is made to "imply" my "misgiving of their capacity." But I intended to imply no such thing. I meant, and it is evident from the context, that because their capacity was known in one direction, it might be expected to prove equal in the other, when the demand for it arose, or occasion offered. My very candour is again apparently turned as a weapon against me in the following obscure passage:—"With reference to the mosaics for the apse, surely it is no proof of hostility to British art that a preference has been given to a foreign design, since even *in a quarter where such a hostility has been insinuated*, there seems some good ground for the choice" (*sic*). I must observe that the "ground for the choice" could not possibly have been found in remarks published after the choice had been made. Merely denying also, the assertion I have italicised, I will remind your correspondent that the one and only reason I gave as conceivable for choosing M. de Triqueti's first design, was that it filled the space in "stiffest symmetry." But this hardly afforded such vantage ground, that what I said of its "forcible feebleness," and the foreshortening and expression of the face of our Saviour, the principal figure might be passed over as wholly immaterial. In like manner very adroitly he evades questioning that we have a host of artists who would be at least as well qualified as the one chosen (whatever his merits as a sculptor), to execute the designs for the mosaics, whether in tesseræ or marble inlays.

Your correspondent's great argument is for the employment of a Dresden glass designer and the Munich school of glass-painters: our artists do not practise the required style; we have a great deal of bad glass; our best designers have not sufficiently studied the technicalities of glass-painting; and no English glass-painter could transfer their cartoons to glass; St. Paul's is not a *corpus vile* to try experiments upon; we must apply to Germany for "commodities" or "articles of *vertu*" as we send to France for silks and Prussin for steel. I imagine, sir, that some of these propositions will be as new to your readers as it is new to me that painted windows for cathedrals are either "commodities" or "articles of *vertu*." Because, then, we have bad weavers and forgers, we must be equally supine under the conviction that we have bad artists. But this gentleman is evidently behind the time. Thanks to Schools of Design, the first authorities abroad are now admitting that of late we have equalled, if not surpassed, foreign competitors in almost every kind of art manufacture. Would this result, however, have been attained had we gone on, as your correspondent would, it seems, have us for ever importing, and made no effort to develop native talent?

A courteous allusion is then made to "strange delusions current in reference to glass-painters," or *painting* I presume he means. I must, however, remind him that assertions are not arguments, and that the *opinions* to which I suppose he alludes are entertained by some of the principal writers on glass-painting, and are not likely to be shaken by the information that there were fine pictorial glass-paintings in the sixteenth century.

My critical opinion that "most of Professor Schnorr's designs are tame or trite" may be questioned by those English "connoisseurs" to whom they are a comparative novelty. But others more familiar with them may be permitted to think that the majority of them must almost of necessity be so. Tame they must be, because often now merely suggested by an artist of seventy, and carried out by pupils. And trite they must be, because executed in the same uniform style of German academicism, whether the subjects be from Gospel history or the "*Niebelungen Lied*," the "*Bibel in Bildern*," or the "Wars of Barbarossa." "Our choice of artists capable of designing works in combination with architectural masses is," it is asserted, "extremely limited." Yet I thought we had, when these foreign artists were called in, such men as Herbert, Dyce, Maclise, Ward, Cope, Watts, Armitage, Redgrave, Horsley, Leighton, Noel Paton, Tenniel, Cave Thomas, and many others almost equally capable. Really it is too bad to ask, "What have those done, even when working under the most favourable conditions?" Yet, if your correspondent is really so ignorant, I am happy to enlighten him. To name only a few,—Messrs. Herbert, Dyce, Maclise, and Cope, at Westminster, and Messrs. Watts, Armitage, and Leighton, elsewhere, have produced works "in combination with architecture" which will bear comparison with any in Europe.

I would not, however, for a moment, be understood to be unwilling to admit that the works of these foreign artists will probably have a general accordance with the cathedral so far as a grandiose style can make them; or even that there are many difficulties in the way of procuring suitable English painted windows for St. Paul's; nor could I desire that any but works of art of adequate excellence should be finally accepted; but I confess to so much patriotic "prejudice" that sincerely would I have wished to see a most strenuous effort made to obtain national work for the embellishment, before all other places, of our national cathedral. Let your correspondent think of the state of British art during the centuries before Hogarth, when hardly any one dreamt that an Englishman could be converted into an artist.

Do we not still laud the patriotism of Halifax in getting the painting of the dome of St. Paul's entrusted to Sir James Thornhill, instead of to Sebastian Ricci, though the result was not very satisfactory and the effort was not followed up? Is it far short of monstrous to find that we have waited 170 years, and must now call in foreign aid to finish our cathedral? Sooner than confess to such an alternative, we believe many Englishmen would see the decorations deferred another century.

Lest I be accused of making objections without offering practicable suggestions, and, at the same time, to prevent any further misconceptions of the course I would see adopted,

* The letter in question was understood to be in reply to statements made in more quarters than one.

† Misprinted "Schnoor" in the letter.

I will remind your correspondent of a case in many respects parallel with the present, or, rather, with what it might have been. Some twenty years ago, the new Houses of Parliament had to be decorated. It was then believed, and with apparently the best reason, that—as your correspondent imagines is the case at present—there was scarcely an artist in England capable of executing a painting suitable for mural decoration. Well, what was done? Did we send at once to France and Germany for fresco painters? No: we invited our artists to a general competition. Though myself an enemy to needless competition, it was here a necessity. We could not commission the works from artists of proved ability, sure that we should get something better than we could hope for from competitions in which many of them would not join. On the contrary, we had to allow the artists time to master the new style of art; and then to ascertain if any excelled therein. What the result was and is, those will best know who remember the Westminster Hall Cartoon Exhibitions, and who have seen the Appeal Court of the Lords, and the Queen's Robing Room, the Royal Gallery, the House of Lords' corridors, &c., at Westminster. It is beside the question to say that the early process of fresco has partially failed: glass paintings and mosiacs are not liable to decay. Nor can it be maintained that the technicalities of glass-painting are more difficult to master than the principles of monumental painting. Why was there not, then, a general competition for the works at St. Paul's, instead of a hole-and-corner competition for the execution of one design, and which was wholly abortive through mismanagement? Though the decoration fund might not have admitted the offering of large prizes, I am confident the importance of the occasion would not have been overlooked by our artists and artistic firms. At all events, if something of the kind had been attempted, the promoters of the foregone scheme might have been spared the odium of appearing to offer a great slight to British artists.

I cannot refrain, in conclusion, from saying that for an uninterested, "humble bystander," your correspondent exhibits a remarkable capacity for special pleading. T. J. G.

In the remarks of "B" on the proposed decoration of St. Paul's, there is such a succession of specious propositions laid down, that it would require a long letter to urge all to their proper conclusions, bringing all evidence to bear on each question as it came; thus we can only cursorily run through them *seriatim*.

In the first place, every one has the right to reason well what the result will be, before he contributes; and it is the duty of all interested in any national work to see that the thing is not carried through *ad captandum* to a failure.

The Committee seem first to have behaved discourteously to all English artists and glass painters in this matter, and then when they find some people think so and delay their subscriptions, "B", begins to defend them. He is either premature or too late in this course. If the windows are to be such successes as he anticipates, contributions will not fail to pay off the debt; if he is doubtful about their success, the present defence of "B" when they are gone so far, is too late.

On the 2nd paragraph—"What would the probability of the present works being completed in this century, if entrusted to English artists, be?"—one may observe that in the old days men were not in such a hurry to get up an effect, and if they thought that holding forth such work continually as the reward of success would improve and render efficient the art of their country or even town, thirty-six years would be nothing to them. Thus you see, without entering into the argument of our present ability to cope with Schnorr (which I hold we have), there is the stronger argument of using all our powers to produce a great school of art, and not giving our prizes away prematurely.

On the third paragraph. Although we have beaten the world in the production of early glass, having studied best how to use the best material in a proper way, and *as* glass, which even the Renaissance people did, look at the Wine Press, or the Annunciation at Conches; look then at Glasgow, and is there in the latter any approach to the comprehension of the use of glass that we have in the former, leave alone the fact that the Conches style, though far from Italian, is much nearer to it than the modern German, which is fearfully heavy and Teutonic? To speak of the western windows as the work of Mr. Clayton, and to argue from them his inefficiency, is ridiculous. For my part, knowing the power of this artist, I am surprised that he allows them to remain.

Again. In the cartoons of M. Schnorr, what knowledge of glass is there shown,—more than in Mr. Maclise's "Battle of Waterloo,"—not intended for this purpose? That the Munich people may torture it into a diaphanie picture, I believe. This is not glass, even Renaissance glass! To talk about the knowledge of the technicalities of glass in these German designs is absurd, and we do not want to see them transferred to bad glass.

6th paragraph. If we do go to Paris for silks, and Prussia for steel, we do not do so until we have at any rate used every endeavour to obtain them at home. We do not go merely to one shop and get their worst specimen, and say in the face of all "national ability!" "You are behind the day!" Regarding the architecture and glass suitable to it, these works will not be in accordance with St. Paul's, if they are at all like the usual Teutonic art, which is only fit for tonic architecture.

7th paragraph. Are the works of Lichfield, Brussels, &c., picturesque? I maintain, in the modern sense of the word, and even in the Munich way of rendering it, they are not. There may be modelling to a certain extent in the figures, and a subduing of parts, but that modern picturesque notion—never. There is always on the whole a certain flatness left. Look at Raffaelle's (or that said to be his), at S. Etienne, Beauvais, or that in Lucca cathedral, by Ugolino de Pisa, far more fit models than those quoted. They have one and all, whether Flemish, French, or Italian, a certain glassy character, a tradition of the past totally distinct from the modern Munich revival. Go from the S. Sacrament chapel at Brussels to Cologne, and see.

With regard to the mosaics of the apse, if they must be had at once, I did not know it was imperatively necessary! probably we are not equal to the foreigners, and Triqueti is perhaps tolerable. There is, however, a mosaic school rising here, and I have seen some creditable specimens, but you cannot wait. St. Paul's, after standing so many years, is at once in a spasm. With regard to the disappointment that would inevitably result from a competition, it is by no means so certain as "B." says; at any rate, we hope no disappointment will result from this entire ignorance of the existence of good English artists.

To conclude. A more open and public mode of proceeding with regard to this business, a greater courtesy to Englishmen generally, and a less hole-and-corner look, would have pleased me more, whatever conclusions other individuals may come to. Only let us in future have deliberation in so important a matter. "B." is of course aware of the proceedings of the committee, and I am not. H. J.

*** We have received five other protesting letters on the same subject, but cannot find space for them.

THE ART OF COMPETITION.

Among the many branches of art, of all kinds, which have been at different times brought before the readers of the *Builder*, there is one which I think has scarcely received the amount of attention it deserves, even with regard to its past achievements, still less with reference to its future possibilities,—I allude to the noble art of competition. The origin of this art (at present unfortunately practised only in connexion with architecture, but the real capabilities of which are unlimited) is obscure; but one of the earliest known examples was with reference to a large building in Edinburgh, for which the limited number of four architects competed, the three unsuccessful men each receiving an adequate sum in compensation for labour expended. Though so bungling an attempt as this may move the laughter of the present generation, still it is interesting as illustrating the infancy of the art. Competition, however, soon emancipated itself from such trammels as these, and expatiated in ample regions; for many years affording to hundreds of the architectural profession the opportunity of working their hardest with hand and brain with little chance of remuneration—surely an ennobling and purifying discipline. It is, however, only lately that the art has shown what it is really capable of, in that, not merely encouraging architects to offer designs with the chance of carrying out their work afterwards, it has incited them to offer full working drawings and specifications for the generous purpose of providing ideas for the corporation surveyor or other privileged person who may be afterwards selected to carry out the work, and with the chance only of a small present to themselves. A competition for a church near Liverpool may be referred to as a fine bold sketch in the latest style of the art, though scarcely sufficiently finished in details,—a deficiency which has been happily supplied by a London banking company, whose production (which I was glad to see done justice to in your pages) may truly be esteemed a *chef-d'œuvre*, which the most sanguine can hardly hope to see surpassed.

But why should so noble an art be illustrated only in one profession? Why not extend its usefulness? For instance—

"*To Artists.*—The corporation of Mud-borough invite artists to compete for the honour of placing an historical painting in their Town-hall, subject, &c. (here state subject of picture), size of the painting to be 15 feet by 12 feet. A premium of 100*l.* will be given to the painter whose work shall be adjudged to be the best; the premiated picture to be hung, but all the works sent in to remain the absolute property of the corporation."

Here, you see, is opened a wide field for future triumphs; and were this suggestion but acted upon, it could not be considered chimerical to imagine a time when this great art might be applied to the commonest purposes of life—when no one would even think of ordering a pair of shoes without asking a score or so of shoemakers to compete for the job, reserving all the shoes sent in as his own property, but giving a present of 10*s.* or 15*s.* for the pair that fitted him best.

We might even hope to see a company formed for assisting in this great object, bearing the title of "The National Competition Company (perfectly unlimited)," and having for its crest, perhaps, such a design as that which was invented by the Lutherans, who were wont to relieve their feelings by representations of a wolf in monkish garb, preaching to a flock of sheep, with the motto "God is my witness, how I long for you all in my bowels." Snug the Joiner.

ON MODERN ARCHITECTURE, BY AN AMATEUR.

Continuing to treat of the important principles of truth in architecture, more especially of the arrangement of the various stones, let me here draw attention to a serious and almost inevitable impediment to having an order from the ground to the roof. It is this,—the large superficial space occupied by the entablature. The wooden temples of the Greeks, whence Classical architecture sprang, had no windows in the intercolumniation: we are obliged to have them, and we can often do so with beauty, but we can never produce beauty by departing so far from the classical models as *to put windows in the architrave and frieze*, as must be done, and is done, if space is not to be wasted in the top of the building. Take, for example, a line of buildings, used as warehouses, in Gresham-street: the windows there are *actually cut through the entire entablature from architrave to cornice*. Again, Moorgate-street, which might be one of the finest streets in London, is formed of compo-daubed houses, whose fronts are *embellished* by Corinthian columns and pilasters supporting an entablature, the frieze of which is perforated by windows as broad as they are high.

I think, sir, that before we can have really good street architecture, the order, as a prominent feature, must be abolished. It is perfectly useless. A column or pilaster, by itself, would act as a buttress; but if it is used it must be overhung by an entablature which projects the more as it rises, and tends to draw the whole building into the street. It is an absurd thing to put our buildings into the shell of a Grecian or Roman temple; and I may remark here, that it would be just as absurd to raise copies of mediæval buildings for commercial purposes. Our church architecture is marked out for us: we can never hope to improve on the glorious Christian temples of our forefathers; but our commercial architecture, the architecture of our offices, banks, &c., must be new, unfettered by prejudices of any kind. But yet, as I said in my first letter on the subject, the two principles, the fundamental laws, of the art should be the same. Truth is the first of these—the most important.

Why should we lie in brick and stone? Why should we pretend that there is no roof to our building; that it is only one story high; that it is built of marble; that it has no chimneys? Why should we disfigure our building by cornices threatening to fall into the middle of the street; by useless excrescences, such as balustrades and parapets? I will not allude again to materials, save in Mr. Neale's words—"Let architects do their duty with those materials that it has pleased God to put into their hands."

EN SUITE.

ENGINEER AND PROPERTY SURVEYOR, NEWCASTLE-ON-TYNE.

"FAIR PLAY IS A JEWEL."

SIR,—The election of a gentleman to fill the above important post took place on Wednesday, the 16th March, when the successful candidate was Mr. Lamb, for some years surveyor to the town of Gateshead. The proceedings of the council are strongly reprobated by the unsuccessful candidates. The facts are these:—The corporation having determined to appoint an officer as above named, advertised for candidates, to which there were fifty-three responses. The examination of the testimonials and selection of the most eligible were delegated to a sub-committee, chosen from the Finance and Town Improvement Committees. These gentlemen, after several days' labour in ascertaining the merits of the several candidates, selected the following six gentlemen as being best suited to the office, viz., Mr. Barry, Norwich; Mr. Britton, London; Mr. Fulton, Dundee; Mr. Lamb, Gateshead; Mr. MacDougal, Rochdale; and Mr. Stephens, Leicester; and they reported the same to the town council on the 2nd March; but at that meeting *another name* was added to the list by the council, viz., Mr. Ridley, of London, and the election was adjourned to the 16th March (as stated in the resolution), "to afford *the selected* candidates an opportunity of personally calling upon the individual members of the council." Several of those gentlemen, at considerable expense and loss of time, made the required visit, and saw the members of the council. So far so good; but in the interim *another gentleman*, one of the original candidates, but not one of those selected, who had been clerk of works to several architects, and latterly held the post of architectural steward to a noble lord, so far overcame the propriety of the council as to get proposed and seconded above the heads of the selected few; and the further consistency of that body may be estimated by the fact that *both the chairmen* of the joint committee of selection, together with *eleven* other members of those committees, *ignored their own report* by voting for a man whose name was not included in their selected list! So much for the far-famed business town of Newcastle-on-Tyne.

LOOKER-ON.

CIBORIUM.

THE custom of placing a canopy over the "table," and veiling it from sight until the celebration of the Communion, arose in the third century, and its origin is easily traceable to the practice of admitting learners and others, not members of the Church, to certain parts of its service. When none but the "faithful" remained, the veils were withdrawn. Chrysostom thus alludes to the custom:—"When the sacrifice is brought forth, when Christ the Lamb of God is offered, let us all join in common prayer: when you see the veils withdrawn, then think you see heaven opened, and the angels descending from above."

Standing in the centre of the church, if veiled at all, the table needed screening on all sides, and the "ciborium" was thus always formed by four pillars supporting a canopy or small cupola. The antiquity of the ciborium is beyond question, and it thus becomes a witness of irresistible force to the fact that the canopied altars now standing on the platforms or chancels of the Constantine churches could not possibly have been there when the ministers' seats in the apse were occupied.

Mr. Purton says he did "not quote Mr. Fergusson's opinions, but his facts:" I again assert that he not only misrepresented his facts, but misquoted his opinions. The inherent rights of a Christian people are most important elements in the consideration of the question—"How should churches be arranged?" There is no point in Church history more capable of complete demonstration than the fact, that the people not only possessed the right of electing their ministers, but exercised it for centuries.

The present "Father" Manning, in one of the last charges given by him, as an archdeacon of our Church, stated, in my hearing, that he admitted the fact that the people originally elected their ministers, but that they did this on *invitation* from the Apostles, and that the power to invite implied the right to retract. I took the first public opportunity of reminding the rev. gentleman that the laity also received an "*invitation*" to *pay* their ministers, and that if one invitation could be "retracted," it was quite clear the other need not be accepted.

The discussion with Mr. Purton arose out of Mr. Beresford Hope's query, "How shall we build our churches?" I have proved that two distinct models exist, as different as a horse from an eagle; and I can as easily prove that the Protestant and Papal systems can only do justice to their respective creeds, by adopting for the first the universal plan of arrangement which prevailed for the first nine centuries, and for the latter that developed in the Mediæval ages.

Ecclesiological writers dwell on what they call the "sacramentality" of the Mediæval churches, which, in plain English, means that a structure should be adapted to its purpose. The principle is a sound one, and shuts out from Protestant use the model that Papists invented.

Father Newman, in his "Theory of Development," thus writes:—"The use of temples and those dedicated to particular saints, and ornamented on occasions with branches of trees, incense, lamps, and candles; votive offerings on recovery from illness; holy water; asylums; holy days and seasons; use of calendars, procession, blessing on the fields, sacerdotal vestments, the tonsure, the ring in marriage, turning to the east, images at a later date, perhaps the ecclesiastical chant, and the Kyrie eleison, are all of Pagan origin, and sanctified by their adoption into the Church" (pp. 359, 360). "Confiding in the power of Christianity to resist the infection of evil, and to transmute the very instruments and appendages of demon-worship to an evangelical use, the rulers of the Church adopted, or imitated, or sanctioned the existing rites" (p. 388).

This admission by a popish writer of such eminence saves the necessity for further demonstrating that Virgin Mary niches, saint chapels, altars, and imitated temples in lieu of churches, are all of comparatively modern origin. As part of her process of "development"—that from Jesus to Jesuit—Rome admits, with charming frankness, that she borrowed them from Paganism and incorporated them into her system.

The logical sequence of Father Newman's premises is, that the original church model must be developed as well as the creed; and that if the Mediæval model be "sacramental" in relation to the views held by its designers, the original system of arrangement cannot possibly be so; and it thus follows that those who dislike the "development" must abjure its model churches.

JOHN ELLIOTT.

INDIAN AND ENGLISH RESERVOIRS.

SIR,—The letter from "An Indian Officer," which was published in the *Times* of March 22nd, appears to call for a few words in answer.

He affirms, that "the largest dams in the world are those constructed in India, and that they are chiefly the work of the Hindoos, who, although they did not understand the science of the lateral pressure of water, were able to make safe dams and provide for the escape of surplus waters."

Now, according to the cross section described in the letter, the flat slope of 3 to 1 is on the outside, and the steep slope of 1¼ to 1 is on the inside, next the water, thereby losing all the important advantage that is obtained by giving the water a good bearing downward on the bank.

The dams for the Bann reservoirs are 110 feet high, width at top 22 feet, and both inside and outside slopes of 3 to 1. Telford's dam at the Birmingham Canal is 55 feet high, 20 feet width at top, outside slope 2 to 1, and inside slope 3 to 1. Both of these examples appear to contradict the practice of the Hindoos.

In comparing an Indian dam with the one at Bradfield, it is stated that the banks have a maximum height of 72 feet, and the reservoir an area of 1,760 acres. Now, the pressure of water on a dam is proportional to the depth, and is independent of the area: the force by which the tendency of the water pressure to thrust the dam from its place is resisted is proportional to the *square* of the depth. The maximum height of the Bradfield dam is 90 feet, and therefore it supports a greater pressure than the one he cited.

As a finish, it is gravely proposed, since although English engineers may be very clever, they are not practical, that a jury of Madras executive engineers (who, it is admitted, have learnt all they know of dams from the works of the ancient Hindoos, and not from any practical experience of their own) should be summoned to report upon the reservoir before it is touched. Would it not be better to send to India for some of the Hindoo "bund" makers of whom he has spoken? As a junior, I have answered this letter because English engineers will most likely pass it by, as it deserves from them, in silence.

AN ENGINEERING PUPIL.

FORMATION OF EMBANKMENTS.

HAVING carefully examined the Bradfield reservoir, I quite agree with your very able article on the subject of the embankment, especially as regards the absence of puddle lining towards the top of the inside slope, and its want of solidity. I think that if a small traction-engine, weighing about 4 or 5 tons, were used to draw the dobbin-carts, it would be preferable to horse-traction, as the embankment would be solidified by the weight of the engine, as well as of the materials and carts. The engines made by Messrs. Burrell are peculiarly adapted for such work, as the driving-wheels revolve on flat wooden shoes, about 18 inches wide. Such an engine would turn in its own length, and would be quite as manageable as a horse, and could further be used for pumping, grinding mortar, and many other useful purposes.

M. E.

FIRES AND WATER.

THE almost continuous occurrence of destructive fires arouses one's thought and stirs up suggestions as to some mode of improving ordinary facilities for extinguishing them.

Suppose arrangements were made for co-operation between fire-brigades and the staff of water companies, by first laying down special water-pipes (or, if better, call them *fire-pipes*) for quenching purposes only, throughout the streets; and by the sides of these pipes to place electric telegraph wires, to embrace all *fire-brigade stations* and the *water-companies' stations*; and to have revolving or other reflectors introduced on towers of brigade-stations and on the towers of water-companies' stations to indicate *a fire*, and reflect to offices below to those on duty, and the place or point of conflagration could soon be ascertained from *the observatory* in the towers; so that both parties would simultaneously commence their operations.

Reserve of *water could be ready in tanks*, placed in the towers of water-companies' stations, having connexion with said fire-pipes and to keep up supply. The force of pumps being set to work, the proper supply of water could be secured to the highest edifice from the elevated position of the tanks, and the fire-pipes being brought to tanks within the towers, sheltered from frost, would be secured likewise, and the supply would be ready the moment the brigade reached the spot, and by attaching a hose to these fire-pipes they would act very efficiently.

Brigade-cars always stored with coils of hose; also travellers to accompany the car; or, if you please, in other cases to form part of the car, so constructed that, like a brick-hoist, it could suit any elevation or altitude on which a man could stand and govern the neck of the hose quite independently of any building.

A. B.

ZINC ROOFS.

SIR,—In your last number we observe a communication, signed "J. W. Tyler," on the subject of zinc covering to roofs. Now, we have nothing to say either against Mr. Tyler or his mode of laying zinc; but we do object to the impression conveyed by his letter, namely, that "*Devaux's* pure Vieille Montagne" is a material superior to *our* Vieille Montagne zinc. This is not the case: the Vieille Montagne Company (whose agents we have been for many years) manufacture zinc for us of a quality expressly intended for roofing purposes. This they stamp "Vieille Montagne Roofing Zinc. F. Braby & Co."

We may add, that the Vieille Montagne Company, in accordance with our agreement with them, allow us a special discount on all zinc which has been certified by their architect (Mr. E. G. Fisher) as being properly laid.

FRED. BRABY & CO.

*** We must decline admitting any similar letters.

DECAY AND MIS-USE OF STONE.

In your number for January 30th, the decay of stone is attributed by a lecturer to smoke of large towns. I think that smoke has little to do with the decay of stone. I have seen Portland stone with half an inch thick of soot on it, and this has been on for years: when the soot was removed, the stone was quite perfect. A large building was erected some sixteen years ago in the west end of London. A quantity of Portland stone was decayed before the roof was on: this stone was not exposed to the soot or smoke of London. I have seen scores of blocks of Portland stone decayed at Portland: this stone has not been under the influence of smoke or soot. The old portion of Somerset House, next the river, is of an inferior quality: it would perish if there were no soot near it. A new chapel in Kensington was opened a few weeks ago, where the flight of steps leading to the entrance door is of Bath stone. It is a great blunder to allow Bath stone to be used for steps. In one day five thousand people went over them: in a few months they will want replacing: then the blame will rest upon the defective stone, which ought to rest elsewhere. W. Cross.

STAINED GLASS.

Algarkirk Church (*Boston, Lincolnshire*).—This church is now furnished with another stained glass window, recently placed in the south transept by the rector, the Rev. Basil Beridge. The window is of the style of the latter half of the fourteenth century, to correspond with the stonework. It consists of seven lights, with tracery above. This tracery is filled by representations of a choir of the angelic hosts, each compartment containing an angel playing on a musical instrument. The subjects chosen for the lights are some of the principal events in the life of our Lord, from its commencement to His Passion, the latter being represented in another window. Each light is divided into two parts, and the subjects read from east to west. The upper dexter group commences with the annunciation of the archangel Gabriel to the Virgin Mary, "Hail, thou that art highly favoured," &c. Following this is represented the Visitation of the Virgin Mary to Elizabeth, which is shown in the traditional way, Joseph and Zacharias being introduced. The next group contains the Nativity of our Lord, with the angel above holding the text, "Gloria in excelsis Deo." This is followed by the Adoration of the Magi. After this is shown the "Presentation" in the Temple, by Mary offering the Divine infant to the high priest. The flight into Egypt is next depicted. This tier ends with the finding of the child Jesus in the temple. Thus the infancy of our Saviour is completed. In the lower tier of lights the Saviour is represented as being baptized by John the Baptist in the wilderness, an angel holding the garments of Jesus. The next group represents the Sermon of our Lord on the Mount, and is succeeded by Jesus and the Samaritan Woman at the Well. The Transfiguration of our Lord, accompanied by Moses and Elias, in the presence of Peter, James, and John, is next depicted; and this is followed by the reception of Jesus by Martha and Mary at their house. The next group represents the triumphant Entry of our Lord into Jerusalem. In the last group Jesus is shown driving the money-changers out of the temple. The groups, both in the upper and lower tiers, are surmounted with canopies, which inclose each subject. The window has been executed by Messrs. Hardman & Co., of Birmingham and London.

Ely Cathedral.—The north aisle of the nave has been enriched by a stained-glass window, given in memory of the late Mr. Thomas Archer, by the members of his family. The window was supplied by Mr. Wailes, of Newcastle. The subjects are from "The Life of King Hezekiah." Of the windows in the nave, one only now remains vacant of stained glass. It is to be hoped this vacancy will soon be supplied.

CHURCH-BUILDING NEWS.

Carlisle.—The foundation stone of the new church of St. Stephen was recently laid by Miss Coutts, at whose cost it is to be erected. The site is at the corner of James-street and Hewson-street. The style is Geometric; and the materials used will be the red sandstone of the district, relieved by white dressings. The red stone will be laid in thin courses rockfaced; and all the coigns and tracery be of chiselled white Prudham stone. The roof will be covered with slates of varied colour. The entire length of the building, including the apse at the eastern end, facing James-street, will be 110 feet, and the breadth, including the two wings, 62 feet. The height from the ground to the ornamental tile ridge of the main building will be 48 feet, the height to the top of the roof of the wings being 24 feet, above which runs a clerestory. There will be a square tower at the James-street end, surmounted by a spire, the apex of which will be 120 feet from the ground. In one side of the tower is the entrance to the vestry; and in the upper part, on each side of the square, are placed two lancet-windows, faced with label mouldings and filled with tracery which will light the belfry in which the peal of bells will hang, which Miss Coutts will also supply at a cost of some 350*l*. From the top of the square tower the octagonal spire tapers gradually to the summit. Its long lines will be broken by two transverse bands of white. The chancel, which adjoins the tower at the James-street end of the building, is polygonal in form and is lighted by three two-light windows ornamented with quatrefoil Gothic tracery. The chief entrance to the edifice will be through a porch at the north side, in Hewson-street. This porch has a pitched roof. This side of the building will be lighted by three two-light windows, while on the other side there will be four. Passing into the interior, we find that the nave, which is 27 feet wide, has two rows of pews of stained wood, arranged on each side of the main passage; and in each of the aisles, which are 15 feet wide, another row of pews is placed, separated from the nave by another passage. All the pews will be open. The arches between the aisles and the nave, of which there are four on each side, are pointed and built of alternate red and white stones, supported upon polished pillars of red granite, with carved white cap and base. At the east end of the nave a Gothic arch, of red and white stone, and with ornamental columns serving as brackets, spans the entrance to the apse, which will form a recess 30 feet deep, in which the communion-table will be placed. At the east end of the south aisle seats will be provided for 70 children. The timbers of the roof are to be all exposed to view, the wood being stained and varnished. The church so arranged will accommodate 600; provision being made for the erection of a gallery at the west end should the step be deemed advisable at some future time. The chancel and porch will be laid with red and black tiles, and the building will be heated with hot water. The probable cost of the building may be stated in round figures at 5,000*l*. Mr. names Nelson, jun., of Carlisle, is the architect; and Mr. Scott, of Newcastle-on-Tyne, who has Just finished the new portico to the Central Station there, is the contractor; who has sublet the joiner's work to Messrs. Lowry, of that town. The clerk of the works is Mr. Beckett, from Liverpool. At the laying of the stone, addresses were presented to Miss Coutts, who delivered a sensible speech on the occasion.

Miscellanea.

Institution of Civil Engineers.—At the meetings held March 8th and 15th, Mr. John Fowler, V.P., in the chair, the paper read was "On the Resistances to Bodies passing through Water," by Mr. G. H. Phipps. On the 22nd the paper was discussed.

The Royal Academy Lecture-Rooms.—A correspondent draws attention to the shabby state of these lecture-rooms, and complains that this want of self-respect on the part of the Academy appears to produce a bad effect on the conduct of the students.

Polygraphic Hall.—Mr. Woodin has resumed possession here with two very successful entertainments, called, "Elopement Extraordinary," and "The Bachelor's Box," the first by Mr. Oxenford, who has displayed considerable ingenuity in the construction of it; the second by Mr. T. W. Robertson. In these Mr. Woodin plays twenty parts, English, Irish, Scotch, and French, with remarkable completeness, the dress being changed each time from top to toe; singing a large number of songs, and dancing a Highland fling. Instead of popping up and down behind a table, he goes in for dramatic action, and wins. The stage is fitted with appropriate scenery: the drop-scene, by the way, is very badly painted, and should be improved.

Roman Aqueduct.—The remains of a Roman aqueduct, eight metres in length, have just been discovered at Vichy, on the Boulevard de l'Impératrice.

Railway Returns.—The traffic receipts of railways in the United Kingdom amounted, for the week ending the 19th of March, on 11,184 miles, to 551,185*l*.; and for the corresponding week of 1863, on 10,805 miles, to 502,868*l*., showing an increase of 379 miles, and of the sum of 48,317*l*. in the receipts.

Patent Office Returns.—The Patent Office vote shows that there were in the past year 3,400 provisional and complete specifications brought in (but only 50 of the latter description), and the fees of the law officers of the Crown in England were 10,363*l*. The fees on patents for the current year are estimated at 105,000*l*., and the expenses at 51,000*l*.; so that there will be a surplus of about 54,000*l*.

The Faversham Waterworks.—At a meeting of the directors of the Waterworks Company, held at the Guildhall, the following tenders for the erection of the buildings and the working stock were received. For the construction of the well, reservoir, and buildings, three tenders, viz. Messrs. Naylar & Son, Rochester, 2,693*l*.; Messrs. Hall, Queenborough, 2,600*l*.; and Mr. L. Shrubsole, Faversham, 2,496*l*. The last was accepted. The works are to be completed by the 1st of October. The following tenders were also accepted: for a steam-engine of 14-horse power, Messrs. Watt & Co., Birmingham, 925*l*.; iron service-pipes, the Anderston Foundry Company, Glasgow, 1,050*l*.

Proposed Free Library, Museum, &c., for Gloucester.—The town council have been summoned, to consider as to the establishment of a free library, &c. The desirability of establishing a museum, school of art, free library, and large public room, was recently discussed at length in the local *Chronicle*, and a private meeting of gentlemen interested in the question was lately held, when Mr. A. Price explained his views, and a resolution was unanimously adopted, to the effect that an effort should be made to supply the want which has so long been felt in this city of some building in which to domicile the various public institutions of a social, literary, and educational character, which already exist, or may hereafter be established. A committee was appointed to confer with the mayor as to the particular form in which the subject should be brought before the council.

Position of Gas Companies.—In his evidence, given before the committee sitting on the Birmingham Gas Companies' Bills, Mr. Wright quoted the following statistics with regard to the present position of gas companies. The metropolis has thirteen companies, with a gross capital of 5,272,279*l*., and a gross revenue of 1,836,946*l*. The meter rental of the thirteen companies is 17,330*l*.; the gas expenditure 1,333,305*l*.; the annual reserve, 32,506*l*.; the cost of coals, 707,783*l*.; and the residual product, 310,173*l*. The price at which the gas is sold varies from 4s. 6d. to 6s. per thousand feet, and the average dividend paid by the companies is 10 per cent. The Liverpool United Gas Company has a shareholders' capital of 529,900*l*., a gross revenue of 204,393*l*., a meter rental of 10,279*l*., and a gas expenditure of 137,562*l*. The price charged for gas varies from 3s. 5d. to 3s. 9d., and the dividend paid is 10 per cent. The Manchester Corporation Gas Works has a shareholders' capital of 397,430*l*., a gross revenue of 161,416*l*., a meter rental of 244*l*., and a gas expenditure of 106,570*l*., exclusive of depreciation. The price charged for gas is 3s. 9d., and the amount of the annual reserve, 12,179*l*. The Bristol Gas Light Company has a shareholders' capital of 24,000*l*., a gross revenue of 68,046*l*., a meter rental of 1,466*l*., and a gas expenditure of 51,406*l*. The price charged for gas is 3s. 9d., and the amount of the annual reserve, 2,000*l*. The Wolverhampton Gas Company has a shareholders' capital of 81,168*l*., a gross revenue of 25,902*l*., and a gas expenditure of 1,741*l*. The dividend paid is 10 per cent., and the amount of the annual reserve, 750*l*. The Birmingham Gas Light and Coke Company has a shareholders' capital of 211,700*l*., a gross revenue of 87,330*l*., and a gas expenditure of 70,985*l*. The price charged for gas is 3s. 4d. and 2s. 8d. The Birmingham and Staffordshire Gas Light Company has a shareholders' capital of 357,900*l*., a gross revenue of 147,228*l*., and a gas expenditure of 107,447*l*. The price charged for gas is 3s. 4d. and 2s. 9d.

FRIENDLY SOCIETIES.—A return just issued from the National Debt-office shows that in November last, when the accounts were made up, friendly societies had upwards of 2,000,000*l.* deposited directly with the National Debt Commissioners, or due for interest on such deposits, and upwards of 2,000,000*l.* more deposited by friendly societies with savings banks, and by the savings banks placed in the custody of the National Debt Commissioners.

PROPOSED NEW PIERS.—The Board of Trade report to Parliament that the following applications for provisional orders giving powers to make new piers on the English coast are unopposed, and that it is proposed to proceed with them:—1. At Brighton, a pier opposite Regency-square, running out a distance of 1,150 feet seaward; 2. Clevedon, a pier near Rock-house Point; 3. Eastbourne, a pier opposite Devonshire-place, to extend seaward 1,000 feet; 4. Filey, a harbour for fishing-vessels; 5. Lytham, a pier opposite Dicconson-terrace, to run seaward 900 feet; 6. Rhyl, pier to extend seaward 1,056 yards, with a covered entrance available as a public room; 7. Sandown, Isle of Wight, a pier to run out to about 1,500 feet from high-water mark; 8. Torquay, pier near Land's End, extending seaward 700 feet, and an extension of the present breakwater at Beacon-hill to the outer Millstone rock, thus forming a new harbour; 9. Walton-on-the-Naze, pier running out 350 yards from high-water mark; 10. Walton, Suffolk, pier extending from high-water mark to about 55 yards below low-water mark. A proposed pier at the Bight of the Exe is to be constructed only as and where the Board of Trade shall approve, there being apprehension that it might injure the navigation of the Exe.

ANCIENT REMAINS AT REDDITCH.—In the "Abbey Meadow," a field about half a mile from the town, large and irregular mounds, all covered with old turf, point out the site of the once famous Abbey of Bordesley. Recently, Mr. R. S. Bartleet, wishing to collect materials for the history of the abbey, obtained the consent of the Baroness Windsor to make excavations in the mounds. The work has been put under the superintendence of Mr. J. M. Woodward, and the foundations of the chancel and the north transept have been laid open, with part of the walls of the south transept, the base of the pier supporting the north-east angle of the tower, and a small chapel with an encaustic pavement in the south transept, having a raised pavement for the altar at the east end. Lines of basement wall, with buttresses, fragments of Norman pillars, mullions, pieces of lead, sills and jambs of windows, shaft caps, mouldings, some of them coloured, loose tiles of a great variety of patterns, stars, fleurs-de-lys, shields charged with various devices, fishes, griffins, &c., bits of sculpture, a stone coffin, a glass bottle, earthenware, cup, smoking pipe, and vitrified substances like glass, have also been found, and many more interesting discoveries are expected.

PUBLIC HEALTH.—It appears from a careful analysis, extending over a lengthened term of years, that the annual death-rate at all ages and from all causes was as follows in various parts of England and Wales:—London, 2·363 per cent.; the south-eastern counties, 1·955 per cent.; the south midland counties, 2·044 per cent.; the eastern counties, 2·058 per cent.; the south-western counties, 2·001 per cent.; the west midland counties, 2·237 per cent.; the north midland counties, 2·111 per cent.; the north-western counties, 2·550 per cent.; Yorkshire, 2·309 per cent.; the northern counties, 2·199 per cent.; and Monmouthshire and Wales, 2·126 per cent. The south-eastern counties would thus appear to be the healthiest, and the north-western counties the unhealthiest, in England. The expression "London" includes, of course, the whole metropolitan district, in which a population of 2,803,989 was congregated in 1861, and which extends over part of Middlesex, Surrey, and Kent. "It will be observed," says the *Times*, remarking upon this, "that the rate of mortality in Lancashire and Cheshire is relatively very high, and the sanitary reforms likely to be secured by the Public Works Act, 1863, are evidently urgently needed. Thus, the death-rate from all causes and at all ages in Lancashire and Cheshire has averaged 2·550 per cent. per annum. Assuming that it could be reduced one-half per cent., 14,678 lives would be saved annually, or 146,780 in ten years, without allowing for the increase of population naturally arising, and taking the census numbers of 1861 as the basis of the calculation."

LIVERPOOL ARCHITECTURAL SOCIETY.—At the meeting held on Wednesday evening, the 23rd, Mr. W. H. Whiteman in the chair, Mr. Boult read a paper "On the Registration of Land Titles," at the conclusion of which a short discussion occurred.

HOW TO DETECT LEAD IN WATER.—In a wine-glass full of water drop one drop of sulphide of ammonium, and stir it with a glass rod or a goose-quill. If there be lead in the water it will be immediately discoloured—black. The sulphide of ammonium should be kept in a little (sixpenny) bottle with a glass stopper.

TUNNEL CUTTING.—A machine, manufactured by Messrs. Hawks, Crawshay, & Sons, of Gateshead, is now being used at Spezzia, on the eastern section of the Ligurian line of railway, in cutting one of the tunnels through the Maritime Alps, between that port and Genoa. It cuts a hole of 7½ feet in diameter, at the rate of 14 feet advance in the twenty-four hours, through very hard rock, consisting chiefly of limestone, with veins of a tougher character running through it. It appears that an average progress of 15 feet per day may be relied on. At this rate, the tunnel through Mont Cenis might be finished in about three years, instead of the eleven which it is computed it will take. Three men and a boy are sufficient to work the machine, which can be driven either by steam or compressed air.

A GREAT COMET PREDICTED.—The following is an extract of a letter just received from Melbourne:—"Professor Newmager, on a three years' scientific visit from Bavaria, tells us that in 1865 a comet shall come so close as to endanger this our earth; and, should it not attach itself to us (as one globule of quicksilver to another), nor annihilate us, the sight will be most beautiful to behold. During three nights we shall have no darkness, but be bathed in the brilliant light of the blazing train!" The professor was leaving Australia for Bavaria, so that we may hear more of this on his reaching Europe. If it be not a hoax altogether, this is at least a prediction not much to be respected, far less dreaded. The great comet predicted by Mr. Hind and others two or three years back, either never made its appearance at all; or, long ere it reached our planet's neighbourhood, became "small by degrees and beautifully fine," so as not to be recognisable even by its predictors.

TELEGRAPHIC PROGRESS.—A line of Bonelli's printing telegraph has already been established between Liverpool and Manchester. Messages are to be reduced to a uniform rate of sixpence for twenty words by this line.——Messrs. Glass, Elliot, & Co., who were recommended by the Scientific Committee to lay the new Atlantic line, are said to have contracted to lay it at their own risk, in 1865, and to keep it in perfect working order for twelve months. The firm are said to be backed by the London Financial Association. The new cable is described as being 35¾ cwt. to the nautical mile, instead of 20 cwt., as the old one was. The conductor consists of a copper strand of seven wires, six laid round one, and imbedded in Chatterton's compound. Gutta-percha, alternating four times with this compound, forms the insulator; and the core is surrounded by jute yarn, iron wires, and hemp, saturated with a preservative substance.——The Malta and Alexandria telegraph is again open.

RECLAMATION OF LAND.—Works are now in active progress in the district of Bradwell, Dengie hundred, Essex, for carrying out at least a part of the plan of the Estuary Company for shutting out the water from the waste of what are called the siltings, converting a tract of them into solid land, and thus adding two or three good farms to the hundred and the county. The works, which are under the direction of Messrs. Beadel, as surveyors, consist of the carrying out of the sea-wall for the protection of the portions of the siltings sought to be reclaimed, and running in a direction up to St. Peters-on-the-Walls, where, it is said, stood the city of Ithancester, in which Christian churches were first established, but which was destroyed and buried by the force of the sea. The land recovered by this first operation will be from 1,000 to 1,500 acres, adding to this extent to the mainland of Essex; but the works will probably be afterwards carried much further; and the cost of reclamation and bringing into cultivation, we understand, will be about 15*l.* an acre. The land, it is estimated, will be worth double that sum.

TENDERS.

For new assembly-rooms, at the Gun Tavern, Croydon. Mr. Henry Bance, architect. Quantities not supplied:—

Lamble	£427 0 0
Thomas & Jenkins	425 0 0

For residence at Woodside, near Croydon, for Mr. Frederic Chambers. Mr. W. Lambert, architect. Quantities not supplied:—

Downs	£1,495 0 0
King, Burton, & Co.	1,325 0 0
Lathey, Brothers	1,324 0 0
Warne	1,225 0 0
Hollidge	1,210 0 0

For new chancel and organ-chamber to St. Mark's Church, Lakenham, Norwich. Mr. J. H. Brown, architect. Quantities supplied:—

Lacey	£985 0 0
Ling & Balls	907 0 0
Wordingham	850 0 0
Rust	842 0 0
Worman (accepted)	798 0 0

For additions to Messrs. Nettlefold & Chamberlain's Screw Works, Smethwick, Birmingham. Mr. T. Chatfield Clarke, architect:—

Cresswell	£2,927 0 0
Branson & Murray	2,850 0 0
Hardwick & Son	2,792 0 0
Briggs & Son	2,788 0 0
W. & J. Webb	2,597 10 0

For a new warehouse, at the corner of Wentworth-street, Commercial-street, Whitechapel, for Mr. Moses Levy:—

Macey	£2,850 0 0
Ashby & Horner	2,769 0 0
Piper & Wheeler	2,726 0 0
King	2,595 0 0
Hill & Keddell	2,525 0 0
Newman & Mann	2,476 0 0

For first portion of warehouses, at Lower Pickle Herring Wharf, for Messrs. Nash, Hicks, & Nash. Mr. S. Brooks, architect. Quantities not supplied:—

Wills	£1,853 0 0
Wells	1,695 0 0
Coleman	1,685 0 0
Cowland	1,643 0 0

For building a new lecture or assembly room, with reading-rooms, at Glastonbury. Quantities supplied by Mr. Day —

Day	£754 0 0
Dives	627 0 0
Merrick (accepted)	552 10 0
Hawkins	544 15 0

For alterations and additions, at Nos. 25 and 26, Hounsditch, for Messrs. Leaver & Breeze. Mr. Wm. Reddall, architect:—

Masers	£573 0 0
Ashby & Sons	547 0 0
Pritchard	527 0 0

For house, to be built near the Victoria Dock, for Mrs. Rees. Mr. G. S. Temple, architect:—

Colls & Co.	£1,250 0 0
Jackson & Shaw	1,143 0 0
Hill & Son	1,030 0 0
Walton	999 0 0
Sharpington & Cole (accepted)	987 0 0

For erecting corn exchange, magistrates'-rooms, &c., at Wantage, Berkshire. Mr. Wheeler, architect. Quantities supplied by the architect:—

Simms	£3,444 0 0
Cordrey	3,197 0 0
Nash	2,955 0 0
Wheeler	2,909 0 0
Fotcher	2,870 0 0
Gardener	2,800 0 0
Stevens	2,780 0 0
Barrett	2,700 0 0
Bartlett	2,600 0 0
Jones	2,540 0 0
Thomas	2,532 0 0
Dover	2,300 0 0

For additions to Rectory-house, East Barkwith, Lincolnshire. Mr. R. J Withers, architect:

Binns & Gant	£534 0 0
Clark	510 0 0
Bellamy (accepted)	480 0 0

For restoration of Pencarreg Church, Carmarthenshire. Mr. R. J Withers, architect —

Jones	£449 10 4
Davies (accepted)	449 6 0

For additional wards to lodge, and works connected therewith, at the Whitechapel Industrial Schools, Forest-lane, Essex Mr. John Hudson, surveyor —

Palmer	£365 0 0
Dudley	360 0 0
Hedges	347 0 0
Paulington	339 0 0
Saunders & Field	338 0 0
Reny	334 0 0
Hill & Keddell	320 0 0
Kilby	298 0 0
Langmead (accepted)	273 0 0
Folley (withdrawn)	217 0 0

For the erection of dwelling-house, in Colchester-street, and additional buildings in rear, for Mr. Joseph Edwards. Mr. John Hudson, surveyor. -

Thorpe	£1,076 0 0
Palmer	778 0 0
Dudley	750 0 0
Jacobs	685 0 0
Hedges	650 0 0

For the erection of a house and premises, in Palmerston-road, Southsea, for Mr. T. C. Haydon. Mr. Joseph Clever, architect. Quantities supplied by Mr. Nichols :—

Simms & Martin	£2,450	0	0
Maeers	2,380	0	0
Ellis	2,217	0	0
Kilby	1,937	0	0
Burbridge	1,876	0	0
King	1,863	0	0
Larcomb	1,788	0	0
West	1,750	0	0
Duffell	1,690	0	0
Bundy	1,609	10	0

For the erection and completion of premises, No. 2, Great St. Thomas Apostle, Cannon-street West, for Mr. Edward Henry Moses. Mr. N. J. Joseph, architect :—

Lawrence & Sons	£2,753	0	0
Axford & Co.	2,720	0	0
Ashby & Horner	2,755	0	0
Condor	2,743	0	0
Hill & Keddell	2,740	0	0
King & Son	2,620	0	0
Newman & Mann (accepted)	2,495	0	0

For the erection of four shops, in Fleet-street, Torquay, for Mrs. Starke. Mr. Edward Appleton, architect. Quantities supplied by Mr. Fred. Chadwick :—

Pollard	£6,700	0	0
Tims & Martin	6,445	0	0
Drake	6,400	0	0
Tanyer	6,353	0	0
Tuxford	6,250	0	0
Smith	6,200	0	0
Goss	6,000	0	0
Jones	5,820	0	0
Matcham*	5,559	0	0
Harvey*	4,990	0	0

* Exclusive of Jennings's flue and drain pipes.

TO CORRESPONDENTS.

Tiles and Salt Water—A correspondent asks to be informed "the best way to take salt water out of tiles that got wetted in the vessel conveying them."

An Old Subscriber (look to a modern treatise on acoustics).—E. E. H.—E. B. in B. (yes. Plans will also be found in earlier volumes of the *Builder*.) J. L.—H. H. S.—M. J.—J. H. (the particulars of Belgian competition may be seen at the office of the *Builder*. We do not understand that the design select d is to be carried out).—C. H. (ditto).—Mc. Advertisements cannot be received for the current week's issue later than **FIVE o'clock, p.m.,** *on Thursday.*

NOTE.—*The responsibility of signed articles, and papers read at public meetings, rests, of course, with the authors.*

[ADVERTISEMENTS.]

STAINED GLASS WORKS.—HEATON, BUTLER, & BAYNE have REMOVED to their new and extensive Premises, KING STREET, COVENT GARDEN, W.C.

ART WATCH CASES.—"In Benson's great case are some fine specimens of engraved watch cases, designed by the pupils of the Schools of Design. They are, perhaps, on the whole, the best specimens of engraved watch-cases in the Exhibition."—*Clerkenwell News*, October 27, 1862. Chronometer, duplex, lever, horizontal, repeaters, centre seconds, keyless, split seconds, and every description of watch, adapted to all climates. Benson's Illustrated Pamphlet on Watches (free by post for two stamps) contains a short history of watch-making, with prices from 3 to 200 guineas each. It acts as a guide in the purchase of a watch, and enables those who live in any part of the world to select a watch, and have it sent free and safe by post. Prize Medal and Honourable Mention, Classes 33 and 15.—J. W. Benson, 33 & 34, Ludgate-hill, London. Established 1749. Watch and Clock Maker by Special Warrant of Appointment to H.R.H. the Prince of Wales.

ADVERTISEMENTS.

The Publisher cannot be responsible for ORIGINAL TESTIMONIALS *left at the Office in reply to Advertisements, and strongly recommends that* COPIES ONLY *should be sent.*

"A work of reference, such as is needed in every industrial establishment."—*The Times.*

In demy, half bound, 7s. 6d.

A DICTIONARY of TRADE PRODUCTS, COMMERCIAL, MANUFACTURING, and TECHNICAL TERMS, with a Definition of the Moneys, Weights, and Measures of all Countries. Reduced to the British Standard.

By P. L. SIMMONDS, F.R.G.S. F.S.S.

A new edition, revised and enlarged.

ROUTLEDGE, WARNE, & ROUTLEDGE, Broadway, Ludgate-hill.

MR. W. FAIRBAIRN'S WORKS ON ENGINEERING, &c.

Now complete, in 2 vols. 8vo with 18 Plates and 322 Woodcuts, price 32s. cloth, or each volume separately, price 16s.

TREATISE on MILLS and MILLWORK.

By W. FAIRBAIRN, C.E. LL.D. F.R.S. President of the Literary and Philosophical Society of Manchester, &c.

"The whole subject is so ably and systematically treated, that we believe there is no question connected with millwork upon which the practical man is likely to require information, that he will not find fully elucidated in Mr. Fairbairn's work. It is a work which commends itself to every description of engaged in the engineering profession."—*Mining Journal.*

By the same Author, 2 vols. crown 8vo. price 10s. 6d. each,

USEFUL INFORMATION for ENGINEERS.

THE APPLICATION of CAST and Wrought Iron to Building Purposes. Third Edition, nearly ready.

London: LONGMAN, GREEN, & CO. Paternoster-row.

New Edition, with 89 Woodcuts, in fcp. 8vo. Price 6s.

CATECHISM of the STEAM-ENGINE, in its various Applications to Mines, Mills, Steam-Navigation, Railways, and Agriculture. With Practical Instructions for the Manufacture and Management of Engines of every class.

By JOHN BOURNE, C.E.

Author of "The Artisan Club's Treatise on the Steam-Engine," of which the Fifth Edition, greatly enlarged, with 37 Plates and 546 Woodcuts, may now be had in 4to. Price 42s.

London: LONGMAN, GREEN, & CO. Paternoster-row.

TO ENGINEERS, MILLWRIGHTS, &c.

Lately published, with new Illustrations, 15th Edition, corrected and improved, to which is added a New Table of Fractional Numbers, 12mo. 5s. cloth,

THE MILLWRIGHT and ENGINEER'S POCKET COMPANION: containing Decimal Arithmetic, Tables of Squares and Cube Roots, Practical Geometry and Mensuration, Pumps, Pumping, and Steam Engines; with Tables of Circumference, Squares, Cubes, &c.

By WILLIAM TEMPLETON. Revised by S. MAYNARD.

"A more useful addition to the Engineer's library cannot well be conceived."—*Mechanics' Magazine.*

"The present edition having undergone the careful revision of so competent an editor as Mr. Maynard, is worthy of special recommendation."—*Athenæum.*

"Will be found of great use to those for whom it is designed."—*Builder.*

Also, by the same Author,

TEMPLETON'S ENGINEER'S COMMON-PLACE BOOK: consisting of Practical Rules and Tables adapted to Factory and Steam-engines, &c. Fifth Edition, with several new Illustrations. 12mo. 5s. cloth.

TEMPLETON'S LOCOMOTIVE ENGINE POPULARLY EXPLAINED. Illustrated by new Designs. Second edition, 12mo. 4s. cloth.

London: SIMPKIN, MARSHALL, & CO. Stationers' Hall court.

PRACTICAL MECHANICS' JOURNAL for APRIL. Part 193. Price 1s. With a large and highly finished Plate, Engraving of Mr. W. H. Cass's Water Motor, and Thirty Wood-cuts.

Original Articles on the Northern Collieries.
Bow-and-Str ng Suspension Bridges.
Curtis's Steering Screw Propeller.
Spoked and Dee Wheels.
The Fret rot of Lead.
Mining Versus Metal for covering Public Buildings.
The late Major General Portlock, R.E.
Essential Oils.
The Mont Cenis Locomotive.
RECENT PATENTS.—Naylor, Safety Valves; Charles & Co. Smoothing Irons; Casting Metals; Girard; Anderson, Propelling; Pilbeam, Sewing Machines; Sands, Machine Knitting Needles; Blast Furnaces, Wilson; Smith, Railway Carriages.
Useful Receipts. Reviews of New Books, Mechanics' Library, Correspondence, Scientific Societies, Monthly Notes, Marine Memoranda, Prices Current of Metals, Wood, &c. List of Patents, Registered Designs, &c.

London: LONGMANS, 39 Paternoster-row; Editor's Offices (Offices for Patents), 47, Lincoln's-Inn-fields

Post 8vo cloth, gilt edges, 3s. 6d.

WOMEN, PAST and PRESENT. Exhibiting their Social Vicissitudes, Single and Matrimonial Relations, Rights, Privileges, and Wrongs; with Supplementary Chapter on Harlotry and Concubinage.

London: WILLIAM TEGG, Pancras lane, Cheapside.

NOTES on the ARCHITECTURE of IRELAND. By J. H. PARKER, F.S.A., and O. JEWITT.—The fourth of a Series of fully Illustrated Papers on the Architecture of Leinster (Kilkenny, etc.) appears in the Number for April, just out, of the GENTLEMAN'S MAGAZINE (price 2s. 6d.), which also contains the second of a Series of Lectures on Art applied to Industry, delivered at the Society of Arts by Mr. W. Burges, and Articles on Gods of the Ancient Britons, Contributions to Local History—Westbourne, Sussex, Two Days in Cornwall with the Cambrian Archæological Association, National Museums of Architecture in London, the Fleming Museum, &c.; Proceedings of the various Archæological Societies, Correspondence on Building Materials, How Bells are Cracked, the Le Mans Brass, Lambeth Degrees, &c.; Reviews; Monthly Intelligence; Obituary; Births, Marriages, and Deaths; Markets, &c. Also ready, in 2 vols. 8vo., price 1l. 12s., the GENTLEMAN'S MAGAZINE for the year 1863.

London: JOHN HENRY & JAMES PARKER, 377, Strand.

On the 1st of April, price 1s. 6d. No. CLXI. (CXXV. New Series),

THE ECCLESIOLOGIST, published under the superintendence of the Ecclesiological Society.

CONTENTS: The Basilica of S. Clemente, Rome—Theobarn and Kirkbôe—Bosham—The Round Chapel of Ludlow: a Plea for its Preservation—Bell-Inscriptions—Worcester Cathedral Restoration—Gloucester Cathedral Organ Building—A Satisfactory New Church in Holland—Cologne Cathedral completed—Foreign Gleanings—The Influence of Local Scenery on Local Architecture—William Dyce—Reports, &c. with an Illustration.

J. MASTERS, Aldergate-street and New Bond-street.

TO SMITHS, ENGINEERS, AND OTHERS.

Just published, Third Edition.

THE MANAGEMENT of STEEL, including Forging, Hardening, Tempering and Annealing, Shrinking and Expansion, And the Case-hardening of Iron. Price 1s. Free of the Author, GEORGE EDE, No. 1, Eaglan-road, Plumstead, Kent, for 12 stamps, or 9s. per dozen

THE ART JOURNAL for April (price 2s. 6d.) contains the following Line Engravings:—"The Lesson of the Passover," by F. Heath, after B. H. Corbould; "The Fighting Temeraire," by J. T. Willmore, A.R.A. after J. M. W. Turner, R.A.; "The Fisher" (H.R.H. Prince Leopold), by G. J. Stodart, from the statue by Mrs. Thornycroft. The literary contributions include: "Wedgwood and Etruria," by Llewellynn Jewitt, illustrated; "Exhibition of the Society of Female Artists;" "Unintended Photographs," by Charles Tomlinson, illustrated; "Portrait Painting in England" by Peter Cunningham, F.S.A.; "Government Schools of Art;" "British Artists: Perry Williams," by James Dafforne, illustrated; "Almanac of the Month," from designs by W. Harvey, illustrated; "Art-Work in April," by the Rev. J. G. Wood, M.A.; "Parables of Our Lord," illustrated; "The New Statute;" "On the Arts employed in Producing the Essential Materials of Clothing," by Professor Archer, illustrated; "William Dyce, R.A.;" "History of Caricature and of Grotesque in Art," by T. Wright, M.A. F.S.A. illustrated; "The Shakspeare Tercentenary Movement;" "Exhibition of the Royal Scottish Academy," &c. &c.

London: JAMES S. VIRTUE, 26, Ivy-lane.

This day is published, in One Volume, demy 8vo. price 18s. illustrated with numerous Plans, Sections, and sketches of Gardens and General Objects, a New Edition, greatly enlarged, of

HOW TO LAY OUT A GARDEN. Intended as a General Guide in Choosing, Forming, or Improving an Estate, from a quarter of an acre to a hundred acres in extent.

By EDWARD KEMP, Landscape Gardener, Birkenhead.

London: BRADBURY & EVANS, 11, Bouverie-street, E.C.

New and enlarged edition, 1864. 2s.; in case, 3s. 6d

BIDDER'S EARTHWORK TABLES, showing the Contents of Excavations, Area of Slopes, &c.

By G. P. BIDDER, Esq. C.E.

London: VACHER & SONS, 20, Parliament-street.

KELLY'S PRACTICAL BUILDERS' PRICE-BOOK; or, Safe Guide to the Valuation of all kinds of Artificers' Work; with the Modern Practice of Measuring, and an abstract of the New Building Act for regulating the Construction of Buildings. Revised and Corrected by New Calculations upon the present Value of Materials and Labour. Arranged by an Architect of eminence, assisted by several experienced Measuring Surveyors. Illustrated and exemplified by Steel Engravings and numerous Woodcuts Royal 8vo. price 8s. neatly bound.

London: published by T. KELLY, Paternoster-row; SIMPKIN and MARSHALL; and may be had of all Booksellers.

Of whom may be had, New Editions in quarto of the following Practical Architectural Works:—

1. PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET-MAKING. Revised by TREDGOLD: being a new and complete System of Lines, for the Use of Workmen; founded on Geometrical and Mechanical Principles. Ten parts at 3s. or in boards, 30s.; containing upwards of 120 Steel Plates, and numerous Woodcut Diagrams.

2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING (revised by TREDGOLD), both plain and ornamental; containing a new and complete System of Lines for Stone Cutting, for the Use of Workmen; the Formation of Mortars, Cements, Concrete, to which is added a variety of new designs for Mural Tablets, Tombs, Gravestones for Cemeteries, &c. &c.; and a description of the various materials employed. Ten Parts at 3s. or in boards, 30s.; containing upwards of Ninety Steel Plates and Numerous Woodcuts.

3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE: containing plain and simple Rules for Drawing and Executing them. To which is pursued a similar historical Description of Gothic Architecture. Illustrated by upwards of One Hundred Steel Engravings, executed by Artists of first-rate talent, including numerous Diagrams, &c. Twelve parts at 3s.; or in boards, 36s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE: containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By S. H. BROOKS, Architect. Beautifully engraved on steel, with Direction for Building, and the estimated Cost of each Edifice. Twelve parts at 3s.; or in boards, 30s.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, and other buildings for public purposes. By S. H. BROOKS, Architect. Beautifully engraved on steel. Ten Parts, at 3s. or 30s. boards.

6. THE HOUSE DECORATOR and PAINTER'S GUIDE: containing a series of Designs for Decorating Apartments with taste, and adapted to the various styles of Architecture. By H. W. and A. ARROWSMITH, House Decorators to her Majesty. Ten Parts, at 3s.; or in boards, 30s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION: containing a complete Treatise on the Art of House Painting, Graining, and Marbling; including the Origin of Colour, the Laws of Harmonious Colouring, the Manufacture of Pigments, Oils, Varnishes, &c. By W. M. HIGGINS, Esq. Accompanied by actual specimens of Hard Brush Graining and Marbling. Ten Parts, at 3s.; or in boards, 30s.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Process employed in every description of Manufacture. By the British Engineer. Illustrated by upwards of 2,000 Wood Engravings. By LUKE HERBERT, Civil Engineer, &c. The rapid progress of Mechanical Science has developed many of the important facts since the first publication, in 1836, of the Encyclopædia. The Inventions and discoveries recently made have engaged the serious attention of the Editor, so as the value of each particular experiment, a description was accordingly prepared. By the selection of new articles, and care in the revision of old ones, this edition has now become systematically enriched; so that it may be relied on as a faithful exponent of "the existing state of Engineering and Mechanism, adapted to the wants of Practical Men." In two large 8vo volumes, cloth letters, 1, price 30s.

There are four reception-rooms, two being 50 feet in length; eleven best bedrooms; stabling for eight horses and coach-house for four carriages; suitable servants' offices; extensive ornamental grounds, with greenhouses, in all 18 acres; gravelly soil; near Sunningdale Station South Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. MAY, Esq. Solicitor, 67, Russell-square.

BUILDING LAND TO BE LET, on advantageous terms, for 99 years, situate at Merton, Surrey, within 10 minutes' walk of the Wimbledon Station or 45 minutes of the City.—The plan of Estate can be seen, and particulars obtained, upon application to Mr. EDWIN SAULLES, Surveyor's Office, Christ's Hospital, Newgate-street, from TEN till FIVE o'clock.

LORDSHIP ROAD, Stoke Newington.—TO BE LET, on Building Leases of 99 years (at low ground rental), several PLOTS, eligible for semi-detached villas and terraces.—Apply to Mr. ROBINA, Boxwell road, Church-street, Stoke Newington.—N.B. Bricks delivered on the estate at low prices.

ABBEY WOOD, near Lessness Heath.—Eligible FREEHOLD LAND TO BE LET, in large Plots, for the Erection of Villa Residences. Term 99 years. Advances if required.—For plans and particulars apply to W. WILLIAMSON, 9, Essendon-terrace, Morden-road, Plumstead, S.E.; or to Mr. ROBERTS, Architect, 25, Laurence Pountney lane, City.

BUILDING LAND in the best part of St. John's Wood.—A choice PLOT, with Road and Sewer along the whole frontage, surrounded by finished property of an excellent description, occupied by first-class tenants, TO BE LET at a moderate rent.—Apply to IFOLD & HUGHES, 33, Manchester-street, W.

FREEHOLD LAND TO BE SOLD or LET, on Building Leases.

2 Acres, near the Station, at Forest-hill.
1 Acre, adjoining Norwood Junction Station.
2 Acres, Gengall-road, Old Kent-road.
A large WHARF TO BE LET, near the Old Kent-road.

Apply to Mr. MAY, Acorn Timber Wharf, Old Kent road.

TO BUILDERS and OTHERS.—TO BE LET, on lease, a large PIECE of LAND, in Foot's Cray Parish, Kent, near a proposed station on the new line from London to Dartford. Excellently adapted for brickmaking purposes. There is no other field within several miles, and most of the land in the vicinity is let, or to be let for building.—Apply to Mr. F. W. WOLFF, Land and Estate Agent, Plumstead, Kent

TO BUILDERS and OTHERS.—TO BE LET on LEASE, for 126 years, several PLOTS of BUILDING GROUND for Private Houses, at 8*s.* per foot frontage, close to the Crystal Palace Railway Station. Also THREE PLOTS for Shops, at ten guineas each, adjoining the Paxton Arms. Maps obtained if required.—For further particulars and plans apply to Mr. HERBERT FORD, Architect, 1, Charlotte-row, Mansion House, E.C.

TO BE LET, with immediate possession, very compact PREMISES, situated in Baker-lane, King's Lynn, about 120 yards from the Railway. There is a 7-horse Steam Engine, in good repair, with shafting; a large workshop, office, store-room, and most convenient shedding and yard room. Apply to Mr. WILLETT, King's Lynn.

VALUABLE PREMISES.—Large, open SPACE, with an area of 1,230 square yards, TO BE LET, immediately, with or without water communication. There is a frontage of 60 feet to the road, situate in a main thoroughfare, one mile north of the Bank. The extension of railways and city improvements, causing such a consequent scarcity of premises, render these extremely valuable.—Apply to E. & W. STURGE, Bridge-wharf, City-road, E.C.

BUILDING LAND between Upper Tooting and Wandsworth Common, on the high road. Frontage 540 feet, near a church and railway-station. Soil gravel. Situation high. TO BE LET, with or without advances.—Apply to Mr. DONALDSON (Paterson & Longman), 3, Winchester-buildings, Great Winchester-street, E.C.

DEPTFORD, Kent.—To BUILDERS, ENGINEERS, SHIPWRIGHTS, SMITHS, MANUFACTURERS, and others requiring or desiring commodious Tenements or Residences for their workmen, or to societies or individuals wishing to provide improved Dwellings for the Working Classes.—The Corporation of Trinity House, having otherwise provided for the inmates of their establishment known as the Lower Ground Almshouses, at the Blowage, Deptford, comprising Twenty-six distinct Dwellings, hereby give notice, that they are willing to receive TENDERS for LETTING the said HOUSES on a repairing lease for 21 years, or more, as may be agreed. Each house consists of a basement, ground, and chamber story; five living rooms and additional offices; and the others can readily be made to have every necessary accommodation added to them. The whole is approached from the street by a centre gateway, and is inclosed within itself as a distinct precinct. These houses are situated in the centre of the large manufacturing districts on the South side of the Thames. They are also, from the cheapness of the crossing at the ferry, very conveniently situated in relation to the large district of the manufactories on the opposite side of the river, from Mill-wall and the Isle of Dogs to the localities adjoining. For permission to view, apply to Mr. NORTHWOOD, No. 1, on the Premises. The whole are to be Let by Tender, in One Lot, and MONDAY, the 25th of MAY next, is the day fixed by the Corporation for receiving the Tenders. For further particulars apply at the Offices of Mr. RICHARD SUTER, Architect and surveyor, 23, Gracechurch-street, E.C. and where a plan of the property may be seen.

P. H. BEETHON, secretary,

Trinity House, March 23, 1864.

WANTED, MANUFACTURING PREMISES, with or without steam-power; or LAND for BUILDING, containing at least 40,000 square feet; in the immediate neighbourhood of London.—Address, the LONDON GAS-METER COMPANY, Limited, 30, Cornhill, London, E.C.

ELIGIBLE FREEHOLD PREMISES TO BE SOLD, situate in a leading thoroughfare, within five minutes of the City, comprising FOUR HOUSES, with back yard and workshop, and back entrance; frontage about 100 feet, depth 70 feet. Suitable for any business purposes, or for the erection of a manufactory or warehouses.—For particulars, apply to Messrs PHILLIP & SON, Auctioneers, No. 2, City road, Finsbury-square.

BUILDING GROUND, in a highly respectable and healthy locality, five minutes from Bow or rail to City or West-end, gravel soil, good roads, and sewers free of cost. Lease from freeholder, at low ground rent.—Address, J. H. B. Mr. Costin, Baker, Sussex-street, Pimlico, S.W.

BUILDING LAND at CHITT'S HILL, WOOD GREEN, overlooking three different counties, and fronting the high road, eight minutes walk from the station and Alexandra Park. TO BE LET for the erection of superior Villa Residences, which are in great demand in this beautiful locality. Term, 99 years. Money advanced if required.—A plan may be seen, and particulars obtained, on application to S. HEWITT, Architect and Surveyor, 101, Great Russell-street, Bloomsbury, W.C.

GROUND TO LET, on Building Lease, fronting on the main road from London to Maidstone, and within a few minutes' walk of the Lamb Abbey Station, near Eltham. For particulars, apply to Mr. F. W. WOLFF, Land and Estate Agent, Plumstead, Kent.

BUILDING LAND at KENNINGTON-LANE, about five minutes' walk from the Elephant and Castle, for 20*l*. for houses which are in great demand. Ground-rent, 4*l*. Also HOUSES and SHOPS FOR SALE, in carcase or finished.—Apply to Mr. J. SEXBY, 25, Lower Kennington-lane, S.

FREEHOLD BUILDING GROUND TO BE LET, direct from the freeholder; also, an ELIGIBLE SITE for a Public House. Advances if required.—For plans and further particulars apply personally to Mr. W. MUMFORD, Architect, &c. 10, Lincoln's-inn-fields.

HARROW, ROXBOROUGH PARK.—FREEHOLD LAND (about 100 acres) TO BE LET, on 99 year Leases, for Building Villa Residences. It is situate near the School, on the slope of the hill, towards the railway, from which it is distant about three quarters of a mile. The occupant of each house would be entitled to the privileges of the School for his children, and would have a free pass by railway to London for eleven years. Bricks made on the estate, and money advanced by the Lessor, if required.—For particulars, apply at Mr HESKETH'S Office, London Assurance, No. 7, Royal Exchange, E.C.

FOR CONTRACTORS and RAILWAY COMPANIES.—2,000 BARROWS FOR SALE—Barrows, Keys, Trenails, Bushes, Sleepers, &c. and all other Contractors' Plant.—Apply to W. P. FRANCE, 20, Bridge Wharf, Paddington.

GUTTA-PERCHA MILL-BANDS.—The Gutta Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving-bands, Lathestrops, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent constability and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water, and the facility with which the only joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Bosses, Union-joints, Flasks, Bottles, Bowls, Toilet-trays, Cutta-percha, Galvanic Batteries, Talbotype Trays, &c. &c. manufactured by the Gutta-Percha Company, and sold by their Wholesale Dealers in town and country

THE GUTTA-PERCHA COMPANY, PATENTEES, 18, WHARF ROAD, CITY ROAD, LONDON.

WAGGONS FOR SALE.—TO BE DISPOSED OF, upwards of 100 CONTRACTOR'S EARTH WAGGONS, now lying at Newcastleton, Canonbie, Roxburghshire.—For particulars, apply to Mr DANIEL ROBINSON, on the spot, or to Mr. JOHN RIDLEY, C.E. Hexham.

Hexham, March 15th, 1864.

DESACHY'S FIBROUS PLASTER.

GEORGE JACKSON & SONS,
HAVING BECOME THE PROPRIETORS OF THE PATENT RIGHTS IN
DESACHY'S FIBROUS PLASTER,

Beg to call the attention of Architects to its Capabilities.

It is adapted for the speedy and economical production of any coffered or circular work, waggon headed ceilings (all bracketing being avoided), cornices, enrichments, fluted and plain columns, panelled dados, all kinds of diaper, &c.; for the linings of walls and ceilings, and for all purposes of ornamental plaster.

The advantages are great. It is of great lightness and of excellent quality; it is not inflammable, and is ready to be painted immediately after it is made. It has been used (under the direction of Owen Jones, esq.) for the ceiling of St. James's Hall; at Messrs. Osler's, Oxford-street; Mr. Hancock's, New Bond-street; the Crystal Palace Bazaar; the Home for the Aged, South Lambeth; and at various other Works.

SPECIMENS CAN BE SEEN AT 49, RATHBONE PLACE.

FRINDSBURY, near ROCHESTER, KENT.

ESTABLISHED 1844.
JOHN BOARD & Co.'s CEMENT and LIAS LIME WORKS, Dunball (near Bridgwater); Office, Queen-street, Bridgwater. JOHN BOARD & Co. beg to inform Builders, Contractors, and Merchants that they continue to manufacture CEMENTS and BLUE LIAS LIME, at Dunball, near Bridgwater, and from increased appliances to their works, are enabled to execute orders for the same to almost any extent.

HYDRAULIC LIME and ROMAN CEMENT, manufactured by LLOYD JONES & CO. Halkin Works, Holywell, Flintshire. The Halkin Hydraulic Lime is the same as used in the construction of the Liverpool Docks, Manchester, and various waterworks, railways, and bridges throughout the country, being so long celebrated for its strong cementitious and consolidating powers for masonry in water. Can be supplied by rail or water to any part of the kingdom, either in lump (fresh), or ground, and in barrels and bags. The limestone can be had in full cargoes, also their cement in barrels, which is of a very superior quality and warranted pure. Orders to be accompanied by a banker's reference. Apply at the Works; or to E. & W. AARON, Agents, 66, South Johnstreet, Liverpool.

PURE HYDRAULIC LIME, Manufactured from the best HALKIN MOUNTAIN LIMESTONE, same as supplied for the construction of the Liverpool and Birkenhead Docks. The HOLYWELL LIMESTONE COMPANY are prepared to deliver the above, in lump or ground, packed in bags, into waggons, at the Holywell Station of the Chester and Holyhead Railway, or on board vessels at Greenfield Wharf, Chester River.
Prices and particulars furnished on application to Mr. EVAN EVANS, Manager, Pary's Mine Works, Holywell, Flintshire.
The Company guarantee the quality of the Lime to be equal to that used by the Engineer of the Liverpool and Birkenhead Docks.
Agents wanted. No applications attended to without a banker's reference

PORTLAND CEMENT WORKS,
NORTHFLEET, KENT.
KNIGHT, BEVAN, & STURGE,

and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 29, Savile-row, London, and at the Museum of Practical Geology, Jermyn street, W.
This stone (which is a perfect oolite) is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth saw, and is wrought at a cheaper rate than any stone in the kingdom.
*** The above WEATHER STONE is 1s. 9d. per cubic foot, delivered in London.

WILLINGTON STONE WHARF,
REGENT'S PARK BASIN, N.W.

ILLUSTRATED LISTS ON APPLICATION.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS. Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

EVERY ARTICLE MANUFACTURED AT THE ABOVE WORKS.
N.B. These goods are supplied to the largest Steel Smelting, Armour Plate, and Crucible Works in the World, to which references can be given on application.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr. ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two-fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees, 17, Millbank-street, Westminster.

BRICKS, PANTILES, AND PAVINGS.
J. H. ANDREWS, Wisbech, offers

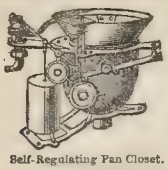
Also Chimneys from 2 feet to 6 feet and Garden pots of every description.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION, 1862.



IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitution for ordinary floors of their perishable coverings. MAW & CO.'S Pattern-book, designed by M. Digby Wyatt, esq. together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, fresco, &c. will be sent on application to Benthall Works, Broseley, Salop.
May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.
London Agents—W. B. SIMPSON & SONS, 458, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf, Macclesfield-street North, City-road Basin, N. Sadly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and 3rdly, that the "Reports of the Juries," page 881, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION

MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts; the Prize Medal at the Great Exhibition, 1851; Two First class Medals at the Paris Exhibition; and Two Prize Medals at the International Exhibition of 1862.
Trade imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.
Chimney pieces, Billiard tables, Tabletops, Baths, Wall-linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works, 39 and 40, Upper Belgrave place, Pimlico, S.W.

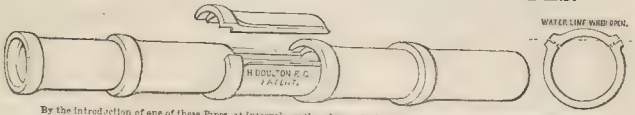
INTERNATIONAL EXHIBITION, 1862. CLASS 10, No. 2268.

The only MEDAL for "STONEWARE PIPES" has been awarded to

HENRY DOULTON & CO., LAMBETH.

Extract from Jurors' Report:—

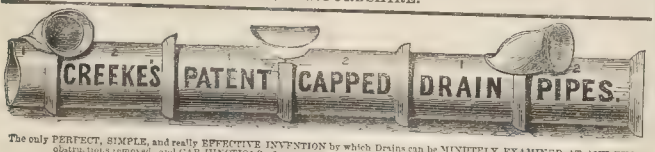


"H. Doulton & Co.—Stoneware Pipes, &c. excellence of manufacture and lowness of price."

GLAZED STONEWARE DRAIN PIPES, TERRA-COTTA CHIMNEY TOPS, &c. &c.

Supplied on the lowest terms, direct from

H. D. & CO.'S MANUFACTORIES, HIGH-STREET, LAMBETH, LONDON; ROWLEY REGIS, STAFFORDSHIRE; and SMETHWICK, near BIRMINGHAM.



DOULTON'S PATENT OPERCULAR PIPES.

By the introduction of one of these Pipes, at intervals, with ordinary Socket Pipes, Drains can be examined and cleansed. The Cover, being fired in one piece with the Pipe, fits perfectly. There are no imperfect joints, or complication of parts.

Manufactured by HENRY DOULTON & CO. LAMBETH.

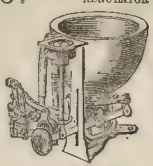
MANUFACTORIES—LAMBETH, LONDON; SMETHWICK, near Birmingham; and ROWLEY REGIS, STAFFORDSHIRE.

The only PERFECT, SIMPLE, and really EFFECTIVE INVENTION by which Drains can be MINUTELY EXAMINED AT ANY TIME, obstructions removed, and CAP JUNCTIONS of any size inserted in the centre of the line of the drain, without breaking a pipe or disturbing the flooring.

They require no more labour in the laying down, and are supplied at the same price as the ordinary Socket Pipes.

SALT-GLAZED STONEWARE SOCKET DRAIN PIPES, INVERT BLOCKS, &c.

Every Article required for DRAINAGE and SANITARY PURPOSES. TERRACOTTA CHIMNEY TOPS, GARDEN VASES, &c. &c. BRICKS, LIME, CEMENT, SAND, LATHS, HAIR, and various other BUILDING MATERIALS.



Illustrated Lists with full Particulars and Prices may be obtained of

STANDING & MARTEN, BOURNE VALLEY WHARF, NINE ELMS, LONDON, S.

*** Specimens of CREEKE'S PATENT PIPES may be seen at the Architectural Exhibition, 2, Conduit-street, Regent-street, W.

J. TYLOR & SONS' PATENT

REGULATOR WATER-CLOSETS.

Valve. Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply-pipe. No cisterns, valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate street, London.

UNDERHAY'S PATENT

REGULATOR CLOSETS for constant or intermitting supply, dispensing with Cisterns, Service Boxes, Valves, Levers, Cranks, &c. &c. Much time is saved in fixing, and a better flush of water obtained in use.

Pan, Valve, Self-acting, and Servants' Closets on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed, 50,000 of them have been sold, and no instance of failure has occurred.

TO ARCHITECTS, BUILDERS, PLUMBERS, &c.

F. G. UNDERHAY

now manufactures on HIS OWN ACCOUNT his Patent Regulator Water-Closets, Valves Gas Meters, &c. on the premises.

CRAWFORD PASSAGE, CLERKENWELL, LONDON, E.C.

INTERNATIONAL EXHIBITION, 1862.

CLASS 35, No. 6849.

3s. 9d.

The ONLY MEDAL "for STONEWARE" has been awarded to DOULTON & WATTS, LAMBETH POTTERY, LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

FIGURE "D" STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

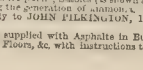
TYE & ANDREWS'

NEW PATENT SINK TRAP is universally admitted to be the only perfect Trap for Sinks in Domestic Dwellings, as fixed at the principal Institutions. Among others, Wellington Barracks, Royal College of Surgeons, &c. &c. Prospectuses on application to the Patentees, TYE & ANDREW, Brixton-road.

SUPPLIED BY ALL LEAD MERCHANTS AND IRONMONGERS.

TIME IS MONEY.—All who employ workmen should send two stamps to MERRITT & HATCHER, 2, Grocers'-hall, Poultry, E.C. and by return of post they will receive a variety of useful Forms, by which book keeping is facilitated, and loss of time and material prevented.—MAPS, PLANS, DRAWINGS, BILLS of QUANTITIES, &c. expeditiously Lithographed in the best style, at the lowest possible charges.—MERRITT & HATCHER, Printers in every Branch, 2, Grocers'-hall-court, Poultry, E.C.

TEN THOUSAND POUNDS READY TO BE ADVANCED by the TEMPERANCE PERMANENT LAND AND BUILDING SOCIETY, on Freehold or Leasehold Property, for any period of years not exceeding fifteen, the mortgage being redeemable by equal monthly instalments. Interest (in addition to a small premium), 5 per cent. on the balances each year.—Apply to HENRY J. PHILLIPS, Secretary.



Offices, 34, Moorgate-street, London, E.C.

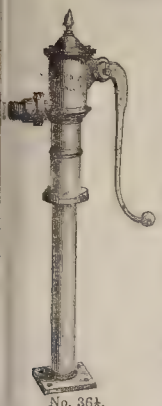
NOTE.—More than a quarter of a million pounds sterling have been advanced upon house property alone.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION (Incorporated by Act of Parliament, 18 & 19, 14, RUSSELL STREET, Covent Garden, W.C. Advances from 100l. to 1,000l. upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.

EDWARD HARPER, Secretary.

POLONCEAU and SEYSSEL ASPHALTE.

ESTABLISHED  1838



For covering Flat Roofs, Paving and Flooring of every description, especially in places subject to damp and vermin. The Asphalte is now extensively used for private stables (as shown above), the absence of joints preventing the generation of ammonia. For Estimates and Plans, &c. &c. apply to JOHN PIERRINGTON, 15, Fish street-hill, London, E.C.

Country Builders supplied with Asphalte in Bulk for covering Footings, Barn Floors, &c. with Instructions to lay it down.

WORKING MEN'S SHAKESPEARE CELEBRATION.—The Delegates appointed by various Trade Societies and Associations recommend that the 300th Birthday of William Shakespeare, their illustrious countryman, which falls on Saturday, the 23rd April next, be celebrated by the operatives and workmen of the metropolis in the following manner:—1. That the day be kept as a holiday. 2. That the Trade and other Associations, accompanied by such of the Volunteers and their musical bands as may elect to join them, with their banners and other symbols, floral, their respective districts, assemble in Hyde Park, by 12 o'clock at noon, and there go in procession to the site of the proposed National Monument in the Green Park, and with musical honours plant a sapling oak (the emblem of England's power and vigour), in memory of the poet. In the after part of the day there will be provided at the Royal Agricultural Hall, Islington, a monster Shakespearian Musical Festival for the People, for which some of the most accomplished artistes of the day have kindly given their services, as also have Mr Benedict, and a choir of one thousand voices, in order to invest this particular demonstration with a truly graceful and national character. Admission by Ticket, 1s. for which early application must be made.

N.B. A memorial badge, specially designed and approved by the delegates, can be had, price 1s., at the Committee Room, and other places to be appointed. RICHARD MORE, Chairman.

NOTICE.
BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72—74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand, and also for the consequent more extensive execution, by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work.
72-74, Bishopsgate-street Within, November, 1863.

COMPETITIONS.

BOROUGH of IPSWICH.—To ARCHITECTS.—The Corporation of Ipswich are desirous of receiving DESIGNS for a TOWN HALL, including a Museum and Library. A premium of 100 guineas will be given for the design which in the opinion of the Council is the best, and a premium of 50 guineas for that which, in their opinion is the second best. Both the premiated designs are to become the absolute property of the Corporation. The plans, specifications, and estimates must be distinguished by a motto or device, and be accompanied by a sealed envelope, containing the name and address of the competitor, bearing a corresponding motto or device written on the plans, &c. Plans of the site, with printed statements of the rooms and conveniences required, and of the conditions to be observed by competitors, may be had on application to the Town Clerk. The competing designs are not to be delivered at the Town Clerk's Office, Museum street, Ipswich, on or before the 22nd day of MAY next. S. A. NOTCUTT, Town Clerk.
Ipswich, March 24, 1864.

TO ARCHITECTS.
A PREMIUM of 70*l.* will be given for the Best and 30*l.* for the Second best DESIGN for a COVERED CORN MARKET, and other Buildings, by the Directors of the Hexham Corn Market and Public Buildings Company (Limited). Plans to be sent in on or before the 12th MAY next, and the gainer of the best premium to furnish a detailed estimate.—All particulars may be known on application to Mr. J. OSWALD HEAD, Hexham, the Secretary.

CONTRACTS.

TO SEWERAGE CONTRACTORS and Others.—TOWNSHIP of TRANMERE, CHESHIRE.—The Local Board for the District of Tranmere are prepared to receive TENDERS for the CONSTRUCTION of about 2,000 yards of MAIN BRICK SEWERS, and at or 7,000 Yards of PIPE SEWERS, with the necessary Junctions, Branches, Manholes, Gullies, &c. Working plans, Sections, Books of Prices, Bills of Quantities, and Specifications may be seen on application to Mr W. A. RICHARDSON, C.E. surveyor to the Local Board, on and after TUESDAY next, the 22nd instant, and copies of the specifications and Forms of Tender may be obtained on payment of 1*l.* Sealed Tenders, made on the printed forms only, to be addressed to me, and left at my office not later than THURSDAY, the 21st APRIL next. The Local Board do not bind themselves to accept the lowest or any Tender.—By order,
GEORGE LLOYD, Law Clerk to the Local Board.
Public Offices, Holt-hill, Tranmere, March 14, 1864.

CROYDON LOCAL BOARD of HEALTH. TO CONTRACTORS and OTHERS.—Persons desirous of CONTRACTING with the Croydon Local Board of Health for the EXECUTION of a length of MAIN SEWER, 4 feet by 2 feet, and the Works connected therewith, at Blind Corner, south Norwood, in the county of Surrey; and another length of such sewer and Outfall Sewers, with the Connections and Manholes complete for the Effluent of sewage, also the Erection of a Filter house and the laying down of land for the purposes of irrigation, at Penge, in the county of Kent, in accordance with the Plans and Specifications prepared by Mr. BALDWIN LATHAM, C.E. the Engineer for the Croydon Local Board of Health, can inspect the plans and specification, in the Office of the said Engineer, at the Town hall, Croydon, on or after this date. Sealed Tenders, indorsed "Tender for Norwood Irrigation Scheme," are to be delivered at the Board's Offices, in the Town hall, Croydon, on or before FOUR o'clock in the afternoon of TUESDAY, the 19th of APRIL next ensuing. The Local Board of Health do not pledge themselves to accept the lowest or any Tender.—By order of the Board.
April 2nd, 1864. HENRY RICHARDS, Clerk

BRISTOL and PORTISHEAD PIER AND RAILWAY.—CONTRACT for WORKS.—The Directors of the Bristol and Portishead Pier and Railway Company are prepared to receive TENDERS for the CONSTRUCTION of about 10 miles of their RAILWAY, with Approaches, Works, and Conveniences. The Drawings of the principal works may be seen on and after the 11th day of APRIL next, at the Office of the Company's Engineers, Messrs McCLEAN & STILEMAN, 21, Great George-street, Westminster, S.W. or at the Secretary's Office, 6, Clare street, Bristol. Contractors who wish to Tender, may obtain the printed Copies of the Drawings, bills of quantities, specification, and form of Tender, on application to the Engineers, or at the Secretary's Office, on payment of 2*l.* 2*s.* Tenders must be addressed to the Secretary, 6, Clare street, Bristol, on or before the 21st day of APRIL next. The Directors do not bind themselves to accept the lowest or any Tender.
JAMES FORD, Chairman
Bristol, March, 1864. J. J. R DANIEL, Secretary.

TO PAVIORS and OTHERS.—The Commissioners of sewers of the City of London, will meet in the Guildhall of the said City, on TUESDAY, the 12th APRIL next, at Half past TWELVE o'clock precisely, to receive TENDERS for RELAYING the CARRIAGE WAY PAVEMENT of the Mansion, agreeable to a specification, which may be seen at this Office. Persons tendering, are required to give the names and addresses of at least two substantial householders as their sureties, to enter into bond with the Contractor for the due performance of the Contract. The Commissioners do not pledge themselves to accept the lowest Tender, or any, unless deemed satisfactory, and no Tender will be received after TWELVE o'clock on the day of treaty.
JOSEPH DAW, Principal Clerk.
Sewers' Office, Guildhall, 16th March, 1864.

CONTRACTS.

BARNSLEY LOCAL BOARD of HEALTH. WATER WORKS DEPARTMENT.—CONTRACT No. 3. To CONTRACTORS for RESERVOIRS, &c. The Barnsley Local Board of Health are desirous to receive TENDERS for the formation of a large STORAGE RESERVOIR (of about 30 acres area), to be situate near Ingwerthwaith, about two miles from the Penistone Station on the Manchester, Sheffield, and Lincolnshire Railway, in the West Riding of the county of York, together with Waste Weir, Tunnel, Roads, Filter Beds, and other constructions. Drawings and specifications may be inspected at the Office of Mr. RICHARDSON, Surveyor of the Local Board, St. Mary's place, in Barnsley, and at the Office of Mr HAWKSLEY, Civil Engineer, 30, Great George street, Westminster, on and after the 21st day of MARCH instant, where also bills of quantities and other particulars may be obtained, on payment of two guineas for the same. Tenders must be delivered at my Office on or before MONDAY, the 18th day of APRIL next, but the Local Board do not pledge themselves to accept the lowest or other Tender.
By order, WM. H. PEACOCK, Clerk to the Local Board.
Barnsley, 4th March, 1864.

BLACKFRIARS BRIDGE. — Notice is hereby given, that the Bridge House Estate Committee will meet at Guildhall, London, on FRIDAY, the 22nd APRIL next, to receive TENDERS for TAKING DOWN and REMOVING the present BRIDGE at Blackfriars, and ERECTING a NEW BRIDGE in lieu thereof. The plans of the said new bridge and specifications of the works to be executed, may be seen, and further particulars be known, upon application at the Office of the Bridge. JOSEPH CUBITT, Esq. No. 37, Great George street, Westminster, on and after MONDAY, the 21st MARCH instant. The Tenders must be sealed up, addressed to the Bridge House Estate Committee, endorsed "Tender for New Bridge at Blackfriars," and left at the Comptroller's Office, Guildhall, London, before TWELVE o'clock on FRIDAY, the 22nd APRIL next, and the parties tendering are requested to be in attendance at Guildhall on that day, at ONE o'clock precisely. The Committee do not bind themselves to accept the lowest or any Tender that may be sent in.
Guildhall, March 5, 1864. FERDINAND BRAND, Comptroller.

SECOND DURHAM MILITIA STORES, AT DURHAM.—The Magistrates for the County of Durham are desirous of receiving TENDERS for the completion of the requisite BUILDINGS and WORKS for the proposed STORE ROOMS and QUARTERS of the Second Durham Militia Regiment, intended to be erected on ground in the street of Gilesgate in the city of Durham. The plans, sections, and specifications for these respective works may be inspected, and perused at the Office of WILLIAM CROZIER, Esq. F.R.I.B.A. County Architect, County Courts, Durham, on and after MONDAY next, the 28th instant. Tenders (properly filled up in every particular, and strictly in accordance with the prescribed form, under seal and indorsed, "Tender for proposed Durham Militia Stores") to be sent or delivered to the County Architect not later than THURSDAY, the 14th APRIL next. The Magistrates do not pledge themselves to accept the lowest or any Tender.—By order,
JOHN TIPLADY, Deputy Clerk of the Peace.
5, South Parade, Leeds.
Durham, 23rd March, 1864

HULETT & CO. 55 High Holborn.

PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862. AWARDED FOR EXCELLENCE.

The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.

It is an entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 8 feet wide

Extracted from the "London Daily Telegraph," May 19th, 1862.

"INTERNATIONAL EXHIBITION, Class 31.

"Of the most recent inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of the Ranges is the placing of the OVEN and ROASTER one above the other instead of *side by side*; and the ROASTER is constantly replenished with fresh air."

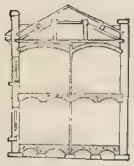
NOTICE TO ARCHITECTS AND THE TRADE.

WEST-END BRANCH, EGYPTIAN HALL, PICCADILLY.

J. DEFRIES & SONS,

GAS ENGINEERS AND MANUFACTURERS OF

CRYSTAL, BRONZED, AND ORMOLU CHANDELIERS, IMPROVED CRYSTAL STAR AND SUN LIGHTS,



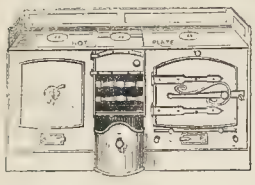
For Lighting and Ventilating Public and Private Buildings.

J. D. & SONS beg most respectfully to inform Architects and the Trade, that having been selected to open a West-end Branch, they have taken the DUDLEY GALLERY, EGYPTIAN HALL, PICCADILLY, and at an enormous outlay they have made it replete with every description of lighting machinery, including REGISTERED DESIGNS of MEDIÆVAL GAS FITTINGS, CRYSTAL, BRONZED, ORMOLU, and ELECTRO PLATED Chandeliers, Brackets, Vestibule Lights, Bronzed and Gilt statuettes.

SPECIAL DESIGNS PREPARED in perfect ACCORDANCE WITH Architectural Arrangements. Estimates furnished FOR THE LIGHTING and Fitting up of Theatres, Music-halls, and Public or Private Buildings with Gas, &c.

The usual trade discount allowed, as at their

MANUFACTORY and CITY SHOW ROOMS, 147, HOUNDSDITCH, CITY.



THE DENNETT ARCH.

Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years on the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome, turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.

Address to the Patentees,—A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co's material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength, and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has the advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.

"GEO. GILBERT SCOTT, 20, Spring Gardens London."

THE LEAMINGTON PRIZE KITCHENER.

These Ranges are strongly recommended for Economy, Cleanliness, and a Cure for Smoky Chimneys.

The Top forms an entire and efficient Hot Plate, and having an Open Fire, removes all the objections of a Close Fire-range.

A large STOCK of SELF-ACTING and other RANGES, REGISTER STOVES, and every description of BUILDERS' IRONMONGERY, at Wholesale Prices.

All Goods delivered free within Five Miles.

BURT & POTTS,

WHOLESALE AND MANUFACTURING IRONMONGERS

38 and 65, York-street, Westminster.

THE PRIZE MEDALS

(LONDON, 1851. PARIS, 1855. LONDON, 1862)

Awarded to

COTTAM & COMPANY,

2, WINSLEY STREET, LONDON, W.

For progressive and general improvements in

STABLE FITTINGS AND HARNESS BRACKETS.

A similar prize at the Paris Exhibition,

Patronized by the English and French Governments, as well as by the principal Nobility, Gentry, and Hunting Establishments in the World.

In use at her Majesty's Stables, Aldershott and Balmoral.

COTTAM & COMPANY, Winsley-street, W. are the original Inventors of the PATENT ENAMELLED MANGER, Water-trough, and Iron-stall Fittings, united to an iron top plate, and forming one complete and useful fixture, having COTTAM'S Patent Noiseless Water Guide and Collar Rein attached, which is taken to the back of the manger, and works with ease and freedom up or down the full length.

COTTAM'S NEW PATENT SEED-BOX, an important addition to the above fittings, being simple in construction, light, and durable, promotes healthiness, and is economical in its results.

COTTAM'S PATENT PERMANENT ATTACHED DROP COVER, for the above, is a most essential addition to their fittings; it is never in the way; can be placed and replaced in an instant; while its cheapness, simplicity, and utility in keeping the contents of the trough clean, and regulating the quantity to be taken, is quite sufficient to insure its use.

COTTAM'S PATENT SADDLE AND HARNESS BRACKET COMBINED

can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

COTTAM'S IMPROVED WROUGHT-IRON VENTILATING BRACKET preserves the shape and allows a free admission of air to the under parts of the saddle.

COTTAM'S IMPROVED SURFACE GUTTER, with perforated grid-metal cover, the use of which prevents accidents, and can be easily cleaned out.

COTTAM'S CAST-IRON SANITARY TRAP, from its improved construction, gives a full water passage, and does not allow any smell to ascend from the drain.

PATENT LOOSE POX FITTINGS, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron gates, fencing, hurdles, &c.

Illustrated Catalogues and Estimates gratis, upon application to

COTTAM & CO. 2, WINSLEY STREET, Oxford Street, London, W.

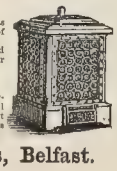
WHERE FULL-SIZED STALLS, LOOSE BOXES, AND HARNESS-ROOM, &c. ARE FITTED UP, SHOWING ALL COTTAM'S PATENT IMPROVEMENTS, &c.

COTTAM & CO.'S only address in London, is 2, WINSLEY STREET, W.

N.B.—WINSLEY STREET IS THE STREET OPPOSITE THE PANTHEON.

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

MUSGRAVE'S PATENT STABLE and HARNESS FITTINGS.



MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

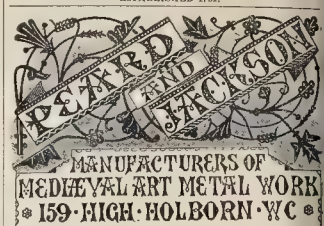
MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition.

They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London architects, noted for employing only what is the best of its kind.

Musgrave's Patent Slow-combustion Stove

Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours, at a cost of 3d.; and deserving of special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to



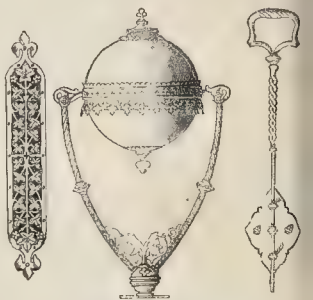
MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

GARDNER'S SUNLIGH

GAS BURNER and FITTING ESTIMATES

Offer important advantages to Architects, Builders, and the Publ generally.—GARDNER'S, No. 453, Strand, Charing-cross, four doo from Trafalgar-square, London.

ESTABLISHED 1752.



SPECIAL DESIGN

& ESTIMATES for WROUGHT IRON & BRAS Gates, Screens, Grilles, Altar & Tomb Railings Hinges, Vanes, Crosses, GAS-FITTINGS, Brackets Standards, Gasteliers, Coronæ, &c., and *EVERY* othe *DESCRIPTION* of METAL WORK for Domestic Ecclesiastical purposes: As also for COMPLETELY EFFICIENTLY Lighting Churches, Chapels & Publi Buildings,—including SERVICE PIPES, METERS &c., will be submitted upon application.

HART & SON

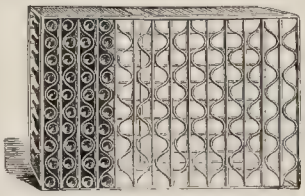
SHEFFIELD.

WROUGHT IRON WINE BINS.

FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING nearly FORTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.



Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom.

*** As these Bins were the invention of the late Mr. FARROW, and great attention has been given to them by the present Firm, long practical experience enables FARROW & JACKSON to offer the best advice as to arrangement.

ALSO THEIR

NEW REGISTERED IRON BINS,

ade any size or shape, to fit any spare corner, with EPARATE REST FOR EACH BOTTLE, Peculiarly adapted for Private Cellars. laths are required, and all trouble of Binning avoided. The Cellular Bins may also be had ded with light lattice doors, affording perfect security to the contents of the Bin.

FARROW & JACKSON,

, 17, and 16, GREAT TOWER STREET; and 1, HARP LANE, LONDON, E.C. FACTORY, 57 and 58, MANSELL STREET.

BROWN & GREEN'S

PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and when fitted with Bath and Steam Apparatus, &c. they form the most complete appointment for good establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

72—74, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept. 6, 1862.

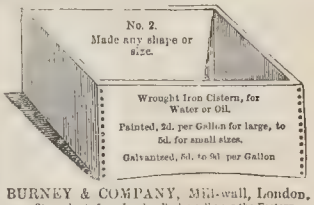
ESTABLISHED 1744

AUSTIN'S IMPERIAL PATENT SASH

and BLIND LINER

To BUILDERS, CARPENTERS, and BLIND MAKERS.

J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his



IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

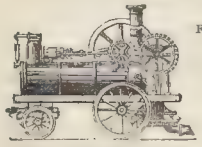
THE LONDON
WARMING AND VENTILATING COMPANY,
LIMITED,
26, GREAT GEORGE-STREET, Westminster, S.W.
MANAGER, MR. WOODCOCK.

Churches, Greenhouses, Offices, and Buildings of every description warmed by means of a modification of the plans successfully used during the last five years by Mr. Goldsworthy Gurney in both Houses of Parliament.

Steam, Hot Water, Gas, and in open or enclosed fire-places, Coal and Coke, are equally available for the process.

The cost is less and the effect greater than that of any other known Plans.



The Horticulturalist will find herein an instrument of new and important powers.

The Apparatus may be seen in operation in ST. PAUL'S CATHEDRAL, the various offices of the "Department of Science and Art," and at the Architectural Societies' House, 9, Conduit-street, Regent-street.

Particulars and testimonials forwarded on application.

SMOKY CHIMNEYS.

S. DEACON
Respectfully invites the attention of Architects Builders, &c. to his
PATENT LOUVRE CHIMNEY CAP,
which has been in use some time with perfect success, many curing chimneys where other caps have been of no avail.
The advantages attending this Cap are—it can be thoroughly cleaned by the machine when the chimney is swept, the brush being able to pass through the Cap without the liability of misplacing it; an increased up current, and the impossibility of a down one.
Prospectus, with testimonials, forwarded on receipt of Postage stamp, by

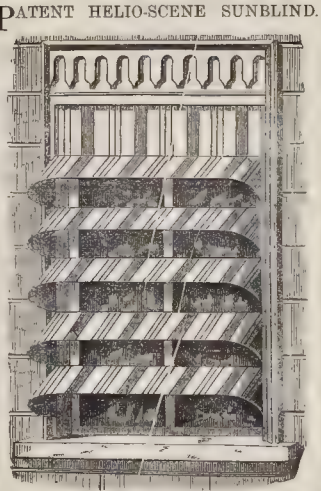
59, ALMA STREET, HOXTON, N.
MANUFACTORY:
HEMSWORTH STREET, SAINT JOHN'S ROAD, HOXTON, LONDON, N.

THE PATENT UNIVERSAL

CHIMNEY HEAD.

The Chimney Head has been designed for the Prevention of Smoky Chimneys and Down Draughts. The horizontal apertures are so placed as to guide the wind upwards, as it strikes the house from any quarter, thus creating a strong current, and assisting the exit of the smoke through the top. The same apertures give ready egress to the wind on all sides in case of its striking downwards from above, and thus greatly diminish the danger of its passing down the chimney.

Price in Zinc ... 20s.
Ditto, Kitchen size ... 10s.
Price in Galvanized Iron 25s.
Ditto, Kitchen size ... 12s.



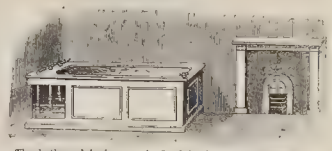
A Liberal Allowance to the Trade
Manufactured solely by
BENHAM & FROUD,
GENERAL METAL WORKERS,
40, 41, and 42, Chandos street, Charing cross, London, W.C.
And to be obtained of all respectable Ironmongers in London and Country.

DEVAUX'S VIEILLE MONTAGNE

THICK ZINC ROOFING on IMPROVED PRINCIPLE;
JAMES W. TYLER, CONTRACTOR,
12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

R. LAIDLAW & SON, Contractors for the Erection of Gas Works, and fitting up large Buildings, Churches, Schools, Mansions, Hotels, &c. for the use of Gas, respectfully invite inspection of their large and elegant STOCK of CHANDELIERS, LUSTRES, PENDANTS, LAMPS, BRACKETS, &c. which being R. LAIDLAW & SON'S own manufacture, they can warrant the superior quality.—SHOW-ROOMS, 199, Strand, W.C. near TEMPLE BAR.—ALL GOODS KEPT IN STOCK.

PATENT HELIO-SCENE SUNBLIND.



These Blinds give a highly decorative finish to the front of a house, and are fitted in frames of any design, the cases fitting into reveals of windows as other outside blind cases. The prices are the same as Spanish blinds. R. LOWTHER & Co. Manufacturers of ALL DESCRIPTIONS of SUN BLINDS. Works, South Lambeth, and Vauxhall. OFFICES, 31, REGENT STREET, LONDON. A liberal discount to the trade.

WINDOW BLINDS.

E. ADKINS,
HIGH STREET, ST. JOHN'S WOOD, REGENT'S PARK, N.W.
OUTSIDE SUN-SHADE,
AND
SPRING ROLLER MAKER
TO THE TRADE.
Patent Self-adjusting Venetian Blinds, requiring no Fastenings for the Cords. Illustrated List of Prices on receipt of One Postage Stamp.

J. TYLOR & SONS' PATENT BATH APPARATUS.

The bath and boiler may be fixed in the same or separate rooms, anywhere below the level of cold-water cistern. Open or close fire at pleasure. No brickwork setting for boiler required.
Estimates given from architects' drawings, or by inspection of buildings.
Catalogues, containing Nine Illustrations of different methods of heating baths, sent on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate street, London.

TO BUILDERS, &c.

COMBINED MACHINE for SAWING,

MORTISING, TENONING, GROVING, RABBETING, and BORING.
Worked by Foot Treadles or Steam Power
T. T. MARKALL, PATENTEE AND SOLE MANUFACTURER,
33, Fieldgate-street, Whitechapel-road, London, E.
Reference to Builders, some of whom have several.

Complete Machine	£16
Mortising only	9
Sawing, Grooving, and Rabbeting	9
With Boring Machine	30s. extra.

DAY and GAS LIGHT REFLECTOR

MANUFACTURER.—THOMAS FOX, 99, Hatton Garden, E.C. and 381, Charles street, Hatton Garden, E.C. A large assortment of Silvered Glass Globes, Lamp Spires, &c. always on hand. All kinds of Bent Glass Silvered.
N.B.—The usual discount to BUILDERS and the TRADE.

BUILDINGS AND SHIPS EFFECTUALLY SECURED AGAINST LIGHTNING.

PATENT LIGHTNING CONDUCTORS,

according to the system of Sir Snow Harris, F.R.S. as now universally adopted in every department of the Public Service, supplied and carefully fitted in every detail, under the immediate instructions of Sir Snow Harris, by G. W. GRAY, who has effectually secured a large number of ships, public buildings, and magazines against the destructive agency of lightning, including the Houses of Parliament, magazines, afloat and on shore, of the War Department, and many churches and other important structures. Buildings surveyed, and plans and estimates submitted, if called for.
J. W. GRAY & SON, 114, Fenchurch-street, E.C.

LIGHTNING CONDUCTORS.

R. S. NEWALL & CO. Patentees of the COPPER ROPE LIGHTNING CONDUCTOR, supply the same, with the point and all staples, complete for fixing, at the following prices:—

Three eighths-inch diameter	1s. 0d.	per foot.
Half-inch diameter	1s. 6d.	,,
Five-eighths-inch diameter	2s. 0d.	,,

R. S. Newall & Co.'s Patent Copper Rope Lightning Conductor is being applied by architects, engineers, and scientific men, in all parts of the world.

Offices—130, Strand, London.
,, Gateshead-on-Tyne
,, 27, Dale-street, Manchester.
,, 68, Anderston-quay, Glasgow.
,, 17, South Castle-street, Liverpool
,, Exchange buildings, Dublin
,, 7, Frederick-street, Aberdeen.

PROTECTION from LIGHTNING.

HART & SON
Beg to call the attention of Architects, Builders, and the public to their
IMPROVED LIGHTNING CONDUCTORS
(SPRATT'S PATENT),
As presenting the MOST EFFECTIVE MEANS of OBTAINING SECURITY from LIGHTNING. They are economical, easily fixed, and APPLICABLE TO ALL BUILDINGS, including Private Houses, Churches, Chimney-Shafts, Dairies, Powder Magazines, &c. &c.
Price lists and estimates on application.
HART & SON,
WHOLESALE AND MANUFACTURING IRONMONGERS,
53 to 58, WYCH ST. STRAND, LONDON, W.C.

RICKETT'S & HAMMOND'S VENTILATING GLOBE LIGHT,

combining an agreeable method of lighting, with convenient, simple, and efficient ventilation.

The advantages attained are these:—
A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION.
A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR.
AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.
A GLOBE LIGHT will consume 5 to 7 feet of gas per hour, giving as much light as an ordinary three-light chandelier, with a consumption of 12 feet per hour.
No. 5, CHANDOS STREET, CHARING CROSS, LONDON, W.C.

IRON ROOFING of CORRUGATED IRON,

Wrought Iron, principal Roofs covered with Slates, Iron Bridge-Girders and Railings; also Portable Buildings for Dwellings, Fair Purposes, Churches, Chapels, Schools, Theatres, Concert or Dancing Rooms, &c. suitable to all Climates, fixed complete in Town or country, or packed for exportation.
For Designs and Estimates apply to
RANDAL STAP, Contractor,
No. 32, KING WILLIAM STREET, E.C.
Where numerous Drawings and Photographs may be seen.
N.B. The Iron Buildings manufactured by R. STAP are not fixtures on Leasehold Property.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.

List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

BATH STONE OF THE BEST QUALITY.

PICTOR & SONS, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

STATUARY AND OTHER MARBLE CHIMNEYPIECES.

ARCHITECTS, BUILDERS, and MASONS will find at

W. WILLETT'S SHOW-ROOMS, MARYLEBONE ROAD, N.W.

OPPOSITE THE YORKSHIRE STINGO,

A LARGE ASSORTMENT of STATUARY & COLOURED MARBLES, also ENAMELLED SLATE, and STONE CHIMNEYPIECES, at Prices to command their Orders.

CARVED TRUSS STATUARY MARBLE CHIMNEYPIECE, FROM £6. AND UPWARDS.

ESTIMATES WILL MEET WITH PROMPT ATTENTION.

ARCHITECTS, BUILDERS, MERCHANTS, SHIPPERS, AND MASONS

Will find that the CHEAPEST HOUSE in LONDON for the following Goods is at the

EMPORIUM, J. W. BIRD & CO.'s, 143½ and 145, EUSTON ROAD, N.W.

BOX STONE CHIMNEY PIECES for 5s. 6d.

Truss ditto ditto, 11s. 9d.

MONUMENTS AND TABLETS

in great variety, equally low in price.

MASONS' WORK OF ALL KINDS CONTRACTED FOR,

AND EXECUTED WITH DISPATCH IN TOWN OR COUNTRY.

A STOCK OF

500 CHIMNEY PIECES

always to choose from.

PRICE LIST ON APPLICATION.

MARBLE BOX CHIMNEY PIECE for £1 5s.

First-class Bed-room ditto, £1 10s.

FIRST-CLASS

TRUSS MARBLE CHIMNEY PIECES from £2 5s. to £3 5s.

A WELL-CARVED

STATUARY CHIMNEY PIECE,

with 13¼-inch Piers,

suitable for a Drawing-room, which must be seen to be believed,

FOR THE SUM OF £6.

Net Prompt Cash.

PRICE LIST ON APPLICATION.

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 47. per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge.

OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,
12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

1862.

The Builder.

VOL. XXII.—No. 1105.

The Evidence on the Bradfield Reservoir Failure.

PERSISTENCE is necessary. In our last article on the failure of the Bradfield reservoir, we promised to return to the evidence adduced at the inquest.

Mr. T. M. Jackson, C.E., Sheffield, was the next witness examined. He said he was chief engineer to the Melbourne Water works, consulting engineer to the Adelaide Waterworks and the Ballarat Waterworks, and first engineer to the Bendigo Waterworks, Australia. "I think," he went on to say, "*the quantity of material in the embankment ample*, and the slope sufficient, but for my own practice should have preferred 3 to 1 on the inside." The length of the embankment at Melbourne is 1,053 yards: it is 30 feet high, width at top 20 feet, width at base 170 feet; inner slope 3 to 1, outer slope 2 to 1, depth of water 25 feet: the inside face of the slope was pitched, 15 inches to 20 inches deep, with an unusual thick puddle wall, clay being plentiful, and the puddle wall was put in 10 feet below the base of the embankment. There are three inlet and two outlet pipes, each of 33 inches diameter: these were fixed in a well tower at the foot of the inner slope. This gentleman has the coolness to say that he thinks the quantity of material in the Bradfield embankment ample, the height being 95 feet with an apex 12 feet in width, and 90 feet head of water, and slopes of less than 2½ to 1. If he thinks so, why did he make the Melbourne embankment 20 feet wide at top, with only 25 feet head of water, when the material of that embankment was good retentive clay, and the Bradfield embankment was formed of loose friable shale and rough stones. "There is something rotten in the State of Denmark." Either the Bradfield embankment is too weak, or the Melbourne too strong, or the laws of statics are different in the different hemispheres.

"There was sufficient puddle, and I think it decidedly good, though for my own practice I should probably have put in a greater proportion of puddle." He does not enlighten us as to the dimensions of the puddle wall of his embankments, but probably he erred on the safe side, as he did with the Melbourne embankment; and as his opinion did not appear to be very decided one way or the other, we may take this sort of evidence for what it is worth. "I should not have formed the embankment in the same way that of Bradfield was formed. I should distinctly prohibit the use of waggons upon a bank, more especially on the inside slope." If it is necessary to make the inside slope solid, it is equally necessary to make the outside solid also, as that assists the inner slope in the support of the hydrostatic pressure: the embankment is intended to support the weight of water, not to be made porous for water to escape through, as appears to be the vague theory of some engineers.

"It is obvious that the layers of earth have been put on in greater thickness than 2 feet. I have seen the Agden embankment, that is now being constructed by finishing one layer before the other is commenced; and if the one at Bradfield had been constructed similarly to Agden, I am quite sure there would be unequal settlement, which is dangerous."

If unequal settlements be dangerous, why recommend the inner slope to be constructed of 2 feet lifts, and the outer slope 3 feet, open and porous? Would not that produce unequal settlements, and the very danger the witness apprehended, and would avoid?

"I think the construction recommended by Mr. Leslie, of Edinburgh, is the best. He restricts the lift to 6 inches, in layers spread evenly over the whole. I also approve of Mr. Leslie's stipulations, that the puddle be carried up, and kept on a level, 6 inches above the adjoining portion of the embankment." These stipulations could not be very well carried out in practice. 6 inches is too little for a lift: it should not be less than a foot, nor more than 3 feet. The puddle is usually carried up in layers of a foot in thickness of clay, &c., at a time. After it is wrought and trodden down, it would probably be reduced to 8 inches or 9 inches in thickness. And it is better that the puddle-wall should be carried up on a level with the embankment as it proceeds, lift by lift, and be well and solidly backed up with the earth forming the embankment.

"In my works at Melbourne, I have had two fractured pipes on each main. They are laid in solid ground up to the edge of the puddle, and, in passing through the puddle, each pipe of each main, which was only 6 feet 6 inches long, was supported on *ashlar pillars*. The fracture of the pipe, I have no doubt, was caused by an unequal settlement of the bank."

This was under a 30-feet bank of good clay. Of course, if no attempt was made to consolidate the bank or puddle, and the outer slope was made open and porous, so as to pass water, we cannot wonder at unequal settlements or fractures in pipes, because the system adopted is the very one to bring about such results.

"I am of opinion that the way in which the embankment at Bradfield was formed, gave a probability of unequal pressure on the pipes, which unequal pressure has caused them to leak." This unequal pressure is occasioned by a soft and unconsolidated puddle, and a loose and porous embankment.

"I consider that on the reservoir at Bradfield being filled, the bank settled, thereby causing a starting or drawing of the pipes." That is the reason why we advocate a solid embankment,—not one that will settle, and in time become solid, but one so made and constructed, lift by lift, as it rises. It would really seem that some engineers attempt to form banks by tipping earth in any way, and in any thickness, without an attempt being made, or time allowed it, to consolidate; and then they feel astonished that the banks fail, and will not hold water. If they went the right way about their work, the result would be different.

When asked by the coroner to account for the failure, he said, "In the first place, I do not think there is any objection to take materials from the valley or to baring the rock: this is more a question of waste of water to the company: no damage could be occasioned thereby to the embankment unless the water percolated under the seat of the embankment." The object of making an embankment for a reservoir there was for the purpose of holding and retaining water, not that it should escape through fissures in the rock, or in any other way: what is the use of going to the expense of such works if large leakages are to take place? What was required was an impervious bed for the reservoir, one that would hold water. If leakages take place the reservoirs are imperfect works, and we do not expect in the present day that such should be constructed.

In Adelaide reservoir there are leakages of rather an extensive character (see *Builder*), and we do not think these matters are to be taken credit for: on the contrary, they rather reflect on the character of the age.

Witness said it would be desirable to have better means of discharging water than by the 18-inch pipes, and he could have designed such outlets by running pipes in a tunnel in the solid, round the end of the embankment, or by a by-wash, as it was when the reservoir was being made.

"There is also another means of averting danger arising from the too rapid influx of the water. In the first instance, the bywash should not be constructed on its ultimate level, but considerably below it, until the reservoir bank has permanently settled and been consolidated. That suggestion is capable of being worked out in a valuable manner, because you may construct a waste weir 40 feet below the bank, and fix a series of sluices in lifts 4 feet or 5 feet above each other, and so ease the bank amazingly." All this evidence is so far good, supposing we are always to have ill-constructed, porous, and unconsolidated embankments: what we contend for is, good substantial work, such as it is possible to attain, and as was the case formerly in our canal works. It is all very well to provide for every possible contingency, and even failures; but it is much more creditable to execute works with an eye to substantiality and durability, and place failures beyond the probability of occurrence.

"Since I was at the Bradfield reservoir on Saturday, that portion of the bank near the weir has fallen [sunk] considerably." This we particularly noticed before in our first article, and that was a satisfactory proof to us of the loose and incohesive character of the earth composing the embankment. That sinking was a settlement of the earth occasioned by the water for the first time filtering in and coming in contact with it; but, being a shallow part, it did not have much effect.

This witness gave at the time rather inconclusive evidence, and assumed, rather irreverently, we think, from his failures at Melbourne and possibly Adelaide, that Telford and other early engineers adopted the same practice, and that the whole profession is at fault. These observations seem uncalled for. Where are the failures in their works? Echo answers, "Where?" Only in the mind's eye of the witness. Their stability and endurance for upwards of half a century attest to the soundness of the principles on which their works are constructed. On the witness retiring, Mr. Gunson was recalled, as there was an impression that he stated that water percolated through the rock he had bared, and came out in the rock in which the puddle-trench had been made. What he intended to convey was, that water which percolated the rock might come out at a considerable distance below the embankment.

He is then examined about the specification. The clauses are:—"That the embankment shall be formed of the most suitable *soil*, slate, clay, or other material, obtained within the reservoir *above* the level at which the water will be drawn off." Again, all the slopes are to be trimmed to 2½ to 1. Again, it says:—"That, after the puddle-trench has been filled to the level of the surface, and the soil stripped off, the formation of the embankment must be commenced at the deepest part, and brought up in horizontal courses of not more than 3 feet in thickness, taking care that the sides are at least 3 feet higher than the middle. Each separate course to be completed throughout before another is commenced. That the whole of the material must be well broken up, and spread in a uniform manner, so as to form a close and compact mass." Mr. Gunson stated these clauses had not been carried out. The slopes are not trimmed so flat as stated, and the lifts are from 3 to 5 feet (said to be 6 feet, at least).

"We are using a similar specification at

Agden reservoir," or rather, we should say, *already it*. He says the specification was intended as a guide, to be departed from or not, as suited the whims or caprices of others. This may, to a certain extent, exonerate the consulting engineer, but it makes the case stronger against the resident engineer. If specifications are to be so readily departed from, and the works, in consequence, fail, as this most likely has done, censure must be looked for.

To avoid such serious evils for the future, a clause ought to be inserted in every specification that no important alterations should be made without the knowledge and consent of the consulting engineer *in writing*.

We must, in justice to Messrs. Leather and Gunson, say that they declared that every precaution had been taken, and everything done that they considered necessary, to produce good and perfect work.

Mr. Gunson said, Mr. Simpson, C.E., of London, who was employed by the mill-owners, saw the Agden reservoir embankment, and was satisfied with it (?). It was stated by the company's solicitor that, in consequence of Mr. Jackson's evidence, "*the points in question relative to the construction of the works are matters of doubt.*" As far as we are concerned, we do not see any points that could be matter of doubt to practical men. The bank failed from being badly designed, improperly constructed, and of improper materials. This is the general opinion of experienced practical men; and who doubts but those who have an interest in doing so. We would recommend in cases of this kind, should they unhappily occur again, that a jury of engineers, specially qualified from a practical knowledge of the particular works to be inquired into, should investigate them, and that matters of such great moment and importance should not be left to the scrutiny of juries as ordinarily composed: they are very useful bodies in their way, but on subjects in which subtle and abstruse points of science arise, rendering skilled and scientific acquirements necessary to arrive at a correct and proper decision, both juries and coroners are too often misled by the plausibility and sophistical argument of expert and learned witnesses, and the consequence is, unsatisfactory, indecisive, and incomprehensible verdicts are sometimes given.

Mr. Rawlinson, the Government Inspector, was the next witness called; and after describing his experience of such works, says, "No waterworks embankment ought to have a line of pipe passing through it, so as to preclude the possibility of examination and repairs." That objection of course may be avoided in some reservoirs; but how would he obviate it at those reservoirs that are embanked all round, or three-banked reservoirs with shelving bottoms? and many exist.

"I know many instances of failures where pipes and culverts are laid through the made embankment." And we know many instances of success, both in England and Scotland; the pipes at Bradfield were not laid through the made embankment, but in a trench cut into the solid earth, 9 or 10 feet below the seat of the embankment.

"When I have laid pipes through puddle, under small heads of water, I have found it necessary to fix in 'washers' to prevent the water creeping along the pipes;" and we have found no such expedient necessary in good retentive strata, with good clay puddle, and workmanship. These are only the means to alleviate or tamper with the disease, not to strike at the root and eradicate it. He then disapproves of the system adopted in laying the pipes. He expected to learn that the course of the puddle trench had been provided for, so as to give the same bearing to the pipes uniformly, as in the solid ground; and he was surprised to find that 200 feet or more were laid in puddle from 18 inches to 30 feet deep, where the greatest possible weight was, under the apex of the embankment, which would be brought to bear upon them. If, as we before stated, puddle be well made and of good material, it can be made more incompressible than solid clay; and if well backed up and rammed with good solid earth, no weight of embankment would disturb it. He observes further, "that embankments frequently sink on railways, from the superincumbent weight on the compressible substratum;" but we seldom find that the case in districts where strong tenacious clays or rocky shales prevail.

"He had been told that the material of which the embankment is formed on either side the puddle trench is not watertight; the inference is, the water would find its way to the puddle wall itself and search out, under the accumulated head, the weakest part. As the water rose foot by foot in the reservoir, it narrowed the space between the water and the puddle 2½ feet each foot; the upper half of the bank not being made of watertight material, but containing a large proportion of rubble stones (some of them measure 4 feet by 2 feet 6 inches, by 9 inches, inside the bank); therefore, as the water rose, it would percolate to the puddle, gradually creep down the face, and find out the weakest point. That this was so, is evidenced by the description given of the breaking down at first of the top part of the bank." This theory harmonises with our own; but the esteemed Inspector, we think, is too chary of giving his opinion about the strength of the embankment, as we think that an important element in bringing about the failure.

"He had been told that this reservoir embankment was made exactly like the Agden one is being made. Having seen that embankment, the mode of tipping the waggons, and the kind of material tipped, he had no hesitation in saying that the substance of that bank is as *porous as a sieve*." Again, he says, "The specification states the tips (or lifts) are not to exceed three feet in thickness. The present lifts at Agden are double that thickness; and in the method of working, the large stones roll to the bottom and form a rubble embankment, in open and porous layers."

These remarks perfectly agree with our observations: we believe we were the first to bring this subject to the notice of the public, and we cannot refrain from expressing our astonishment that in this, the nineteenth century, in one of the centres of industry, abounding with practical workers of all kinds, and shrewd and able thinkers, this blot, this anomaly, should occur. Why, nine-tenths of those unscientific, untrained, uneducated eyes, that saw the embankment after the accident, said, "it was never likely to stand." Why was not a little of this sterling common sense brought to bear upon the work in question during its operation.

"I hold that it was most objectionable to take the material to form the embankment from within the reservoir, unless trial shafts had shown the strata to be watertight;" but this, it appears is contrary to the specification; and what they could expect in stripping the rock we cannot imagine, unless they had been trying to make a leaky reservoir. In a specification lying before us, by an old engineer, it is stated, "When the bottom and sides of the cutting shall be sand, or other material that is not watertight, a puddle of three feet in thickness shall be laid over the whole surface thereof, and thoroughly connected with the natural watertight ground."

"I have examined the by-wash, and I do not think this is adequate to safely carry away the flow of water into the reservoir; I would have made a much larger one." That we have already clearly shown to be necessary: the rainfall on those hilly gathering grounds is at times exceedingly heavy. On the 8th August, 1856, 3·12 inches fell in one day, producing on the gathering-ground nearly 49,000,000 cubic feet; and if only two-thirds of that was collected, it would yield 32,466,720 cubic feet, which would take the present weir and pipes upwards of seven hours to discharge: the water might possibly accumulate in half that period; and what is to become of the excess? Mr. Rawlinson thinks it is a fatal objection not to provide means to shut off the water inside the reservoir, as is generally adopted, and expressed great surprise that the by-wash made to facilitate the execution of the work was destroyed.

When asked to account for the accident, he says, there may be a dozen causes which may have led to it,—"the fracture of a pipe, a blown or drawn joint, a pressing down of the pipe in the puddle-trench, or a washing away of the outer slope (the landslip), a creep along the pipes or through the springs in the stratum." His opinion is, that it was a fatal mistake to lay 200 feet of piping in an artificially-formed compressible material. The rough stones should have been left out of the mass of the embankment nearest the puddles; the layers of 3 feet were far too thick for an embankment of that character; and he agrees with Mr. Leslie as to the use of 6-inch layers, and that no waggons should be used in the embankment. Many of these suggestions are mere matters of opinion: some would have been obviated by perfect work, and we think lifts so shallow as 6 inches would be difficult to carry out: this is rushing to the other extreme.

In cross examination, he said, "You might never have heard of this accident if the internal portion of the bank had been impervious to water, and could have kept the water from the puddle-trench. It is quite clear that, up to a certain height, the embankment was safe. It stood with 50 feet of water from June till recently, therefore something afterwards occurred, when the water rose which altered all the conditions, the water feeling its way through the puddle, and working its way out." It is strange that the latter fact was only extracted after the evidence in chief,—absolutely drawn out, while we consider this one of the chief causes of the failure, a weakly-designed and insufficiently-made embankment, one that was as open and "*porous as a sieve.*"

If the embankment was constituted as described, why need we search for or adduce other causes for the accident? That alone is sufficient of itself to produce it, plain and palpable to even ordinary observers. Mr. Rawlinson was evidently swayed by the different theories set up, and, perhaps, a little by "fellow feeling," or professional etiquette; and he did not appear to be invested with sufficient authority. Even now a thorough examination of the embankment and pipes might be made, and the mystery, if any, at once cleared up.

In a matter of this nature, it is very unsatisfactory to the country, that after this awful sacrifice of human life, the primary cause of this accident has not been discovered, whether occasioned by defective works, or faults over which there was no human control; but we trust it will not be allowed to rest here; a thorough and searching examination is called for, both in the interest of the public at large, and for the benefit of engineering science in particular. Mr. N. Beardmore, who was sent by the Secretary of State to assist Mr. Rawlinson, was the next witness called. He says, "I think the Agden embankment is not being built in a sufficiently secure manner that a work of that kind requires. Such a work should be largely secured against the remotest contingency of accident;" and he thinks, alluding to the cause of accident, it would be difficult to discover the difference between cause and effect. This gentleman is the compiler of certain hydraulic tables, &c., treating of the properties and strength of materials, but he gives us no calculation of the pressure of water on that embankment, or the strength and resisting properties of the bank itself, nor does he give any opinion about it, so that it must be inferred that he considered the bank strong enough. Mr. Rawlinson also expressed no opinion on that point, but *Mr. Jackson said the strength was ample.*

"My impression is, the puddle is excellent workmanship." In that opinion we do not agree: it does not accord with our own experience, nor that of most practical men who have seen it. Indeed it does not appear there is good clay for such a purpose to be had in the neighbourhood (clays such as we have near London, Oxford, Leicester, Birmingham, Cheshire, &c., good argillaceous material that would hold and retain water); but there appears plenty of shale,—a term adopted by geologists to express an indurated shaley clay. It is stiff and moulders into powder in water, while good clay is insoluble in water: such material can never make a good puddle. But we should like to have a fair sample of the puddle analyzed, and to see what its component parts are. It would not certainly do to make bricks of, or it would have been turned to profitable account long ago.

"To my mind, the most natural conclusion is, that the pipes led the water to do the mischief. Telford, the great engineer, never, I believe, put pipes through the embankment of a dam." If the pipes are laid as described by Messrs. Leather and Gunson, the failure could not arise from the cause stated; and, as to the latter remark, we may state without fear of contradiction that that was Telford's practice, as appears by the section of the dam-head of the Rotten Park Reservoir, near Birmingham, as published in his work. This reservoir is about 80 acres in extent, and its dimensions we have given in a previous number.

If Telford could accomplish such works with the knowledge and experience of his day, surely it reflects strongly upon us, in our era of boasted advancement and intelligence, that our works fail under similar circumstances; but it perhaps may be accounted for by the fact that at the present time we theorize too much, and that

practical detail does not form the groundwork of an engineer's education, as in the olden time of our Brinsleys, Rennies, and Telfords.

THE ARCHITECTURAL EXHIBITION.

It is becoming necessary that original promoters of the Architectural Exhibition, or those by whose arduous exertions it was provided with a home, should consider whether the present position of the institution is exactly what they can be satisfied with. This much is certain, that the proportion of merit to exhibited works of the especially desired class, has not been increasing during the last few years; whilst if we may judge from the attendance on Tuesday evening, when the opening *conversazione* took place, the Exhibition does not attract so many of the heads of the profession as previously, or a class to whom (as something more and higher than professional interests would counsel) our art should be addressed, and by whom it should be an object in demand.

The *conversazione*, or private view, of the Architectural Exhibition in former years was both an agreeable meeting-place of friends, and an occasion likely to attract persons not of the profession. On Tuesday evening, however, which certainly was wet, some of those who had watched the struggles that led to a benefit conferred upon all the Societies at present under the roof in Conduit-street, were heard to regret that neither exhibition nor *conversazione* were equal to what they had been on the opening of the present galleries.

Without effort, both to keep up an institution, and to make it pass the previous mark, it is sure to be in danger of extinction, if only from contrast between the external advancement accrued, which it professes to represent, and the manner of the representation.

We have perhaps been heretofore too sanguine in expecting that the Exhibition should in a great degree represent the contemporary practice of architecture. It is worthy of remark that a much more extensive and comprehensive exhibition of art, than any that we have in England,—that which takes place in Paris,—is more, and much more, than ours, in contrast, as to architecture, with the French art as exhibited in buildings. But French architects seem to publish everything, or to procure the publication of their works, as in books of engravings: the result is that the profession is before the French people; a large section of the public, interested in art, is formed, or assisted in the formation; names in the profession get known, and works become the means of mutual education to architects, and general advancement. We have no substitute for these agencies: for, exhibitions of competition drawings must be very differently managed from what they are now, before their part of the competition system will effect the good that it in particular might.

Moreover, it is admitted by us, and indeed directly urged, that the proper subject-matter for the architect,—his real work,—is not an exhibition drawing, but the building. We have seen so many apparent evidences of a power of design helped by the practice of perspective-drawing, and use of the brush, that we could not be prepared to treat them as non-essentials; yet, it is very remarkable in the French architecture, as it has been previously in the course of progress of our art, how much work of the highest class is produceable without those aids to representation.

This we are satisfied about, that the system of representation of buildings, which is persevered in to a great extent in Conduit-street, and spite of all efforts to counteract it, is even an absurdity. A drawing in perspective is a view taken from a single point. The point may have been rightly selected; perspective, as of an interior, may be supposed to give the impression exactly as it is realized by the observer,—which *perspective* cannot: but the view is still but one; whilst the actual impression conveyed, just as in the case of an isolated statue, is realized by a multitude of observations. Whatever be given, therefore, plan and section should, as we have been repeating for years, be never omitted. The profession does not want the public to be interested in the perspective *drawing* mainly, and much less in the pretty colouring, but in the thing itself; and if it does not want the public to make the mistake, it does not itself want to be interested that way, excepting the same as by any relaxation, a good novel, or the play.

The system of representation thus being, as there is reason to suppose, erroneous to a great degree, besides impolitic in one sense, we come to this further and evident objection, that it is this chiefly that prevents the exhibition of drawings by the architects who are most engaged in actual work of art in building.

Looking at the question in all lights, we think it is now for the original promoters, and the whole profession, to consider whether an exhibition of drawings, and the galleries in Conduit-street, may not be made the means of greater help to progress in our art, than they have been of late years. In the room devoted to competition drawings, one author of a design will exhibit his plan; and the author of the next design will have no plan; whilst, not the slightest information is afforded us, in the catalogue or on the walls, of the nature of ground, and generally of the problem in the case. Mr. T. C. Sorby is almost alone as an exhibitor who has got up the representation of his design in something like the manner to afford complete knowledge of it. Plan might have nothing to do with architectural design and effect, following the idea that exhibitors seek to give the public of it.

The members of the present committee seem to have been in office many years. We know that some of them gave much time in hanging the drawings, in early years; and that one or two of them gave some time that was very valuable to them this year. But we are inclined to ask whether there are any meetings, and whether between one another they occasionally discuss the position of the undertaking over which they are supposed to preside. If even such drawings as the Pugin collection of a recent year, or such works as those of the Society of Sculptors (some of which this year are admirable) are required, the Architectural Exhibition, such as it was originally designed, will not be a permanent institution. A dozen architects out of those who are in practice, might, with little more than tracings of their working drawings, make up a much more valuable exhibition than that which is open at this moment; but architects will often prefer to send nothing, to being at the trouble of getting up elaborately coloured drawings. Exertions have been made to get this view of the matter understood: they must be continued with increased energy, and partly by members of the committee setting example themselves. The whole question should be at once discussed, and effort made towards a good exhibition for next year. The compilation, and indeed printing and appearance, of the catalogue, should be much improved, as we have often recommended: improvement of the ornamental details of the galleries should be considered, even should the result be to only displace the plasterer's trusses and some of the ill-proportioned and common-place ornament; and on great occasions, the galleries should be at least comfortable and clean.

We have written strongly, because of our desire to aid the committee in rendering the exhibition what it should be.

At the *conversazione* Mr. Digby Wyatt took the chair, in the course of the evening, and addressed the meeting briefly; Mr. Godwin and Mr. E. B. Lamb, on invitation, following him.

It should not be supposed that the present exhibition does not well deserve to be visited; and the 2s. 6d. season-ticket as usual includes admission to six lectures, all of which promise to be interesting and useful. Professor Donaldson will deliver the first.

There are 399 numbers in the section of the catalogue devoted to drawings. Of these, about 110 are attached to competition drawings; whilst 61 belong to "Sketches contributed to the Class of Design of the Architectural Association during the sessions 1862-63," four to models, and some other numbers to drawings and specimens of decorative works. One side of a screen is covered with the set of photographs issued for 1863, by the Architectural Photographic Association. Many of the designs, and drawings of executed buildings, have been exhibited before,—which we mention as a fact, not as itself a reproach. There are some drawings of old buildings by the Rev. J. L. Petit (117, 279, 282), Mr. R. P. Spiers (102, his St. Stephen's, Walbrook, Royal Academy Drawing, for which the silver medal and books were awarded), Mr. E. I'Anson (137, the Cathedral of Basle, &c.), and others. One of Mr. I'Anson's drawings (192) shows the "Ancient Painted Altar Piece A.D. 1636—Dutch Church, Austin Friars." This altar-piece, though by no means what should be imitated, was a specimen so interesting historically, that we are glad a drawing of it has been preserved. The altar-piece represented an interior somewhat like one of the perspectives of Peter Neffs; panels closed the end of the view; and upon these the commandments were painted. Eight careful drawings (319 to 326) of architectural remains at Baalbec, Cairo, Palermo, Agrigentum, Pompeii, Pæstum, and Gerasa, are exhibited by Mr. T. Wells. Dr. Dresser has some capital studies in ornament (307 to 313) chiefly conventionalized from floral and foliated types, and never departing from the flatness suited to mural decorations; and Mr. A. B. Donaldson has (315 and 317a) two sketches (or rather they should be called drawings; as they are carefully coloured and thoughtfully designed) of parts "of a procession intended to occupy a space under the clerestory in the nave of a church." With this class of works may be named the two drawings (115 and 118) of "Mosaic Pavement from Edward the Confessor's Chapel, Westminster Abbey."

Very nearly all the designs in the West Gallery, and some which are in the Great Gallery, relate to various competitions,—as those for Liverpool Exchange, the Albert Memorial, the West London Union Workhouse; St. John's Church, Carlisle; the Wedgwood Memorial Institute; Manchester Cemetery; the "Holborn Valley" Improvement; the German Evangelical Church, Islington; the Amicable Society's Schools, Scarbro'; New Blackfriars Bridge; Congleton Town Hall; and Freemasons' Hall and Tavern. Connected with the Liverpool case, there are selections of drawings from about fifteen of the sets of designs.

Perhaps the most striking drawings in the Great Gallery, are those by Mr. Spiers. One of them has been already mentioned. The others include the "Design for the Vestibule and Staircase of a Royal Palace," in three drawings (289 to 291), "for which the Gold Medal, Scholarship and Books, were awarded by the Royal Academy," a grand composition, and exceedingly well drawn, and the "Design for a Sculpture Gallery, for which the President's Prize and a Medal of Merit were awarded by the Institute of British Architects" (293, 294). Mr. Spiers has turned his studies in the *atelier* of Questel, and in the *concours* of the École des Beaux Arts, to the best account. Those who think that brilliant colouring is necessary to exhibition-drawings, should refer to the view of the staircase. It is more in accordance with the system originally required of students in the Royal Academy, than the present system of the Architectural Room, which the late Professor, Cockerell, so often spoke against. In the section of the Sculpture Gallery, colour was required to explain the decoration. Mr. Marrable's showy drawings at the opposite end of the room, the "Staircase, Garrick Club" (200) and "Board-room, Metropolitan Board of Works" (200a), contrast in every way with the works last named; but alluding to the difference in ornament on walls and ceilings, it must be recollected that the designs were made with reference to execution. The remark that there is such difference between the cases, may seem commonplace: but there is a very large and difficult subject yet to be treated and expounded, connected with the sort of difference of results and the reasons for it. We cannot say that there is much original art in these works by Mr. Marrable, or why there should be so little. In another drawing (199) the same architect shows the exterior of the Garrick Club, which will have (or in the building, has) a cornice, and decoration to the windows, of Italian character, in cement. Also by Mr. Marrable is the "Church of St. Mary Magdalen, Warriour-square, Hastings" (218 and 222, an exterior and an interior view).

Church architecture continues to afford distressingly little in the shape of new thought. Mr. E. G. Paley's "Churches recently built in Lancashire" (271) appear just what might have been erected in the thirteenth century; or they have only the negative merit of not falling into those eccentricities of colour and form which, when originality is sought now, are too often accepted in lieu of a better kind of invention and true taste. Mr. Bland, of Birmingham, seems in some of his works to have copied Mr. Street's details as well as his style of drawing. He exhibits "Design for Enlargement of Cheltenham Church" (110); "Proposed New Church, Stroud" (132); "Interior View of Church about to be erected at Acock's Green, near Birmingham" (242); "Interior View of Wesleyan Chapel, now erecting at Leeds, near Birmingham" (261); and an "Interior of Proposed New Church, Stroud" (280). Mr. Street himself exhibits a view of the exterior (147) and one of the interior

(154), of the proposed Church of St. Mary, Clifton, Bristol, each drawing being by Mr. R. Norman Shaw. The design is remarkable for a feature which is either original, or has not to our knowledge been introduced in recent churches. The aisles (of the choir, if we recollect rightly) are narrow and low; and each bay is arched over from the piers (which are massive) and from lintels, and is covered externally by a saddle-backed and coped roof between buttresses boldly projecting from the clerestory or main walls. The roofs of course show as gables; but the gable has an arch beneath, and windows. Let us hope that out of such attempts, may at last be realized what we certainly have not got yet, a style of church-architecture creditable to ourselves, as of our time. The tower in Mr. Street's design is plain octagonal except as to a portion of its height; and the spire is of course of the same form. More invention is occasionally shown in the Gothic designs for churches for the Protestant communities of foreign countries, than in those for our own country, or than was shown in the earlier nineteenth century churches planned for the colonies. There is much that is thus commendable in the "Proposed English Chapel at Amoy" (172), by Mr. P. B. Hayward. The roof, which is thatched with reeds, has wide, over-hanging eaves, carried by timber arches springing from the weatherings of the buttresses. In a corner of the west gallery is a "View of proposed Church at Cairo" (9), by Mr. C. H. Cooke. The whole building here, as shown in a plan, is surrounded by a cloister or ambulatory, for protection from the extremes of temperature. The chancel is apsidal; and the tower, rising from the ground at the south, is joined to the cloister by a short corridor. In decorative character, the design seems to be a happy combination of the English Gothic with local characteristics of style, including the use of coloured materials in horizontal bands. A plan also is attached to Mr. Joseph Clarke's "Interior of Chapel, House of Charity, Soho, showing a Portion of the proposed Decorations" (149). The plan, with other illustrations of the design, appeared some time ago in our pages. The site being nearly square, the aisles were arranged by as it were prolonging the space of each of the two bays of each side of the nave, transept-wise, and terminating each such bay by an apse, corresponding with that to the chancel. The nave by this arrangement does not exceed usual width. The aisles or chapels are enclosed by screens in metal-work. The painted decorations, archaic and partly symbolic, are not of the character of art that should be practised at this day, or that would be even understood by those to whom the paintings would be addressed. There is still much room for discussion about the subjects to be introduced in churches, in the painted decoration, and about the positions which should be occupied; but if paintings are to be so prominent as when they are of large size and occupy the east end, or space above the chancel arch, they should at least excite feelings of devotion, and not rather the opposite feelings produced by the grotesque. The "Baptistery: St. Francis of Assisi, Notting Hill; designed in May, 1861" (145), by Mr. J. F. Bentley, displays much elaborate work in coloured marbles, or other material,—the decoration resembling in some respects Mr. Butterfield's work in the church in Margaret-street, and in the chapel of Baliol College, Oxford.

Messrs. Newman & Billing are erecting a church at Deptford (127), Christ Church, which has a square tower with saddle-back roof, a roof in one span over nave and aisles, bands of coloured material; and windows carried up, some of them only, under gablets. Messrs. Banks & Barry exhibit (266) "Proposed Free Church, about to be erected for the Plaistow and Victoria Dock Mission," and (275) a "View of the Interior" of the same church. The tower has a slated spire; and the angles are terminated by square turrets, pierced, or as "tabernacles," capped by slated spirelets. Mr. Lamb's drawings include one (124) of "St. Martin's District Church and Parsonage House, about to be erected at Haverstock Hill," an Interior (260) of the same building; "A Study" (258) of a Church for London, and another (259) of an Interior; and a "Sketch for Stoke Mandeville Church, Bucks," (262). Mr. Lamb is evidently trying to aid in working out the problem of seating a large congregation without the use of obstructing piers. In one of his interiors, where there are transepts which appear to be of considerable width, and there are no aisles to the nave, the timber roof at the cross is partly carried directly on four stone piers, or without arches. These piers are in line with the walls of the nave, and at short distance from the transept-walls. The Haverstock Hill Church will have a square tower on bold arches, there being a carriage-way through. There is suggestive treatment of the clustered wall shafts, or pilasters, of red brick with stone capitals, to the western arch of Cold Hanworth Church, Lincolnshire, of which an interior view (202) is shown by Mr. John Crofts. These are all the drawings of churches that we have noted, excepting Mr. J. P. Jones's "Church and Proposed Buildings for the Brotherhood of Franciscans, West of England—Tower to be erected as a Memorial" (171), stone with red brick; and some good views in lithography by Mr. J. D. Wyatt (7, 155, and 203). Two of them represent works by Mr. G. G. Scott.

Looking, before conclusion of the present notice, at another class of subjects, we find a frame containing some of Mr. Truefitt's works (161 to 165) as usual prominent. They include "The Bell Inn, lately erected at Kilburn;" a "Warehouse, lately erected at Worcester;" and houses at Wimbledon, Potter's Bar, and Tufnell Park. The first-named work is a capital specimen of treatment of the subject, a common road-side inn. There is little effect from decoration, but much from the simple arrangement of the projections on plan, and from the grouping of the roofs of the centre and wings, the latter carried up a story higher than the centre. Most of Mr. Truefitt's designs, however, are lessons as to effect obtainable without ornament, and of the utilization of the Gothic without copyism of it, or without the introduction of things which are of old usage, rather than accordant with modern habits. Service has already been done, at least in suburban architecture, on the one hand, by abandonment of stucco, so far as this has taken place; and on the other, by that of stone mullions, whilst preserving the gable; and there may be some reason to hope that there will be good results in future art. Whether the future of the architecture of towns themselves is equally promising, or whether the art there could be helped by the same manner of building, might admit of much discussion.

ARCHITECTURE IN FRANCE.*

MEDIÆVAL TO RENAISSANCE.

A HISTORY of architecture in France is no light matter to give to this audience. Its leading features, and very much of its details, have been already most admirably set forth by such writers as Petit, Freeman, Fergusson, Scott, and others of our own country; and by De Caumont, Viollet-le-Duc, Verneilh, and other French authors; and there are few, perhaps, of my audience who do not well know not only those works, but the examples themselves, from personal study in France.

Much, therefore, that one would ordinarily dwell upon would be a mere waste of time here, and I trust, therefore, that I shall be excused in speaking to a greater extent than I usually do of these particulars, which have struck me the most forcibly in my own French studies.

Now, to begin with, I must ask you to call to mind the well-known fact that France never did, from the earliest to the latest of the Mediæval times, exist as an architectual whole. We find great local peculiarities in England, between even the different counties. Extend the studies to the sister kingdoms of Ireland and Scotland, and the peculiarities are seen still more strongly. But Mediæval France was broken up into various schools of art in a much more determined way. It was never, except in a few rare instances, one kingdom at all, politically,—not subject to one ruler, -not obeying the same laws.

Clovis found at his accession that his southern boundary was the Loire. He passed that, and pushed his confines on to the Garonne, and even beyond. Burgundy was added by his son. Charles Martel did nearly the same; so did Pepin; and so, after him, did the still more renowned Charlemagne, who ruled at his death what no French ruler, except Napoleon, ever did before or since, *all* France, with a great part of Italy, Spain, and Germany. But after these great monarchs, France was dismembered by their several sons; Italy, Spain, and Germany were eventually lost; and Mediæval France, such as her kings ruled in the twelfth century, really comprised only what was left of the kingdom when Brittany, Normandy, Burgundy, and all else to the east of the Rhone and south of the Loire were cut off.

And we must remember that this was not merely so in name: that these provinces, owning the French king as their feudal chief, were not really his vassals. These provinces were, *de facto*, distinct kingdoms, allied with their feudal chief when it suited their purpose, and allied equally often, for the same reason, with his enemies; and the counts of Brittany, Normandy, Burgundy, and Aquitaine, warring as often against the king as for him, and thus keeping up the national feeling of their several provinces in opposition to a united France, drew strongly a line of boundary to each for art as well as for war.

It was not till Philip Augustus and St. Louis (1226—1243), at the beginning of the thirteenth century, that the King of France was really the ruler of the greater part of it, as we now know it; and even after them France had to go through the fiery ordeal of our Edward and Henry, and saw Brittany, Normandy, Burgundy, and Guienne still and again defy him. Then, again, in England, ours was the architecture, mainly, of one race. The Roman work was well-nigh destroyed before our architecture, as we find it, arose; and exercised no influence whatever upon it. But in France, the Roman work remained bodily before the eyes of the Mediævalists. Even now, you enter Rheims, or Autun, or Bordeaux, by or near the old Roman gateway; you may still see bull-fights in the amphitheatre at Nismes, and may worship the arts there in the temple where the Roman bowed down to his gods. In fact, the Romans themselves, like their architecture, seem never to have quite died out, but to have amalgamated, in the south especially, with the conquering races. Many proofs of this will be found, directly stated, in history. Then, again, there came down streams of emigration from the Rhine and down the Rhone, the Rhenish arts and architecture coming down with the streams, as we English carry them to our colonies. Then, again, there came up from the sea, through the southern ports, whatever the Venetians could bring from Byzantine Venice, and whatever the Easterns could send from Saracenic Syria and the Nile; not mere goods and merchandise, but arts and the men who practised them, and who formed goodly colonies at Marseilles, and Narbonne, and Limoges, much as we English do now wherever the doing is worth it. Then, too, in the north, were the Normans working art in their own province, Normandy, their own peculiar style,—the only one, so far as I know, of Mediæval times clearly belonging to the name, and to be traced wherever the Normans went, in their own land, in England, in Sicily, distinctly, to them and to no one else. So that, with all these facts together, we may well hesitate at tracing French history in a part of an hour or so.

Yet I willingly have dwelt, at some little length, upon this beginning, because it really forms the basis upon which all knowledge of such history must be founded; and because, too, it shows how little an architect can expect really to know, if he venture beyond mere bricks and mortar, without being well grounded in history. Not only the history of France but, we must know something of what was practised at the time in Germany, Venice, Constantinople, and the East, before we can enter very deeply into the matter. Without, however, detaining you more as to this, I may state broadly, as an introduction to French architecture, that between architecture as practised by the Romans and as revived in France, in later times, there was a clear, deep gap of some six centuries. For the latest time assigned to any Roman work of note is the third century, whereas the earliest Mediæval work that we know of, as worth caring for, bears date about the tenth. That is a long stride, that same six centuries; Goths, Franks, Saracens, had overrun the country then; Charlemagne, the great emperor, had ruled and died, and his enormous kingdom had been scattered to the winds; and, as we come upon France at the awakening of art in the tenth century, we find its king governing no more than one of its large provinces.

Now in all this great space of 600 years there is scarcely anything, from one end of France to the other, of importance enough to have attained celebrity.

A few remains of some little interest may, indeed, be cited, and they are scattered widely

* By Mr. T. Hayter Lewis, read at the meeting of the Architectural Association, April 1st.

over the country, from the Basse Œuvre at Beauvais, in Picardy, to St. Jean, at Poitiers, and Coustonges, in the Pyrenees.* But the dates of these buildings are very doubtful, and the remains too scanty for successful theorizing, and all that we know beyond the Roman character of the detail is, that the nave and aisle arrangement with clerestory above was clearly, though rudely, even then in use; so, too, apparently was the dome; and that the masonry most in use was that of small stones, carefully bonded, and often arched with courses of Roman tiles.

It will assist us in our estimate of the arts in France at that time, if we call to mind that in England we had Brixworth, Wearmouth, and Jarrow; that in Germany there were Aix la Chapelle, and the portico of Lorsch; in Italy, St. Vitale, St. Prassede, and one, at least, of the fine brick towers; and at Constantinople, St. Sophia's. So that our art then in France was sadly in arrear, and that is about the sum total of our knowledge both of the character of existing works and of their dates. We get in the tenth century on somewhat surer ground, for we have then, as examples, Tournus, St. Etienne, at Nevers, the Abbey of L'Ainay at Lyons, and Note Dame de la Couture at Mans.

As to the latter, however, I have very strong doubts, and as the presumed age of the oldest part is almost the end of the tenth century, we may, I think, safely refer the building, generally, to a later date, and so remove it from our present consideration. The rest of these churches are more particularly within reach of German influences. At Lyons there is the dome, together with a singular arrangement of sculpture over the aisle columns; and at Tournus an almost unique example of vaults, arranged cross-ways, over the nave. This occurs in several places to the aisles, but I remember no other to nave. St. Etienne, at Vignory, I have not seen, but Viollet-le-Duc assigns it to the tenth century. There is, however, a very good monograph of it in the Institute Library, by M. Girault de Prangey, who gives good reason for supposing that the church is not earlier than the beginning of the eleventh century. Even at this date, however, we have the first, so far as I am aware, of the chevet arrangement, and without any trace of its being copied, to my knowledge, from any existing building.

The main works of similar date in Italy are parts of S. Ciriacco Ancona (a cross church) S. Fosca, in Torcello (also a domed church), and S. Ambrogio, at Milan; whilst in Germany there is little beyond parts of S. Pantaleone, at Cologne, and, perhaps, parts of Mayence. I say *perhaps*, for when we come to investigate these early-dated buildings—to go through the history of their repeated rebuildings and reconstructions, we become painfully aware that nothing but an examination, stone by stone, on the spot, such as Professor Willis and others have given to our own buildings, can, with certainty, clear up their history.

We may, however, so far as our knowledge goes, take it for granted that the beautiful arrangement of apsidal chapels appears in its earliest example in the north-east of France at the end of the tenth century, or beginning of the eleventh.

The interest increases with the next century. In the tenth century nearly all the examples were drawn from the countries near the Rhone: but in the eleventh we must trace the awakening of our art in nearly every part of France, and can find noteworthy examples everywhere.

In Picardy and Normandy we have Roscherville, Jumièges, the abbeys of Caen, St. Lo, and others, all bearing strong signs of their Norman parentage, and being, in fact, more Norman than French, if we may so distinguish the parentage.

In Brittany there is comparatively little worth notice clearly identified with the eleventh century; and one is surprised to find that the same must be said of that tract of country so rich in memorials of the two next centuries, French Flanders and the Isle of France. Champagne, Burgundy, Lorraine, and Alsace contain little more than Langres—a very large and interesting church with details clearly copied from classic remains (a good sketch of it is given by De Caumont)—S. Remi, at Rheims, which clearly shows a German feeling, and Notre Dame de la Couture at Mans, which shows the most northern, to my knowledge, of the Angiovine churches without aisles. But get down farther south and we have a most interesting series gradually appearing. We have in Anjou, Poitou, and the neighbourhood, Loches, Saumur, Villandry, that most interesting example, St. Hilaire, in Poitiers, and others.

Here we have clearly, so far as we can judge, in the eleventh century, the grand arrangement which we find in many of the old basilican churches, of the eastern end raised high above the western part. One finds too, in nearly all, the barrel vault, carried on great square sectioned ribs; the apsidal ends sometimes on the chevet plan, as at St. Hilaire, and sometimes in the plainer form of the simple apse to chancel and each aisle, as at Loches. And we find, too, the simple plan, so well known since as the Angiovine, of the cross church, without aisles, apsidal end and dome at the crux.

St. Hilaire and others, too, have their domes. All these churches are worth attentive study; St. Hilaire, in particular, seems to me to present as many picturesque features, shorn even as it is of its nave, as any church of the size that I know. Notre Dame de Nantilly, at Saumur, too, is a most interesting place, and if the date assigned to its roof (the eleventh century) be correct, it shows about the earliest case of the pointed arch, up north, that I am aware of.

Then we get down farther south to Guienne, and we find ourselves at once in a country where art has advanced in a degree that we should scarcely expect from the few examples northward. We find Souillac, Perigueux, Toulouse, Moissac, St. Croix at Bordeaux, Carcassonne, and others, all presenting the most picturesque effects of plan and section, and, as a whole, very much beyond the general style of the more northern provinces.

Now here we meet, for the first time, so far as I am aware, with well-recorded instances of the real Byzantine pendentives, as distinguished from the form used by more Eastern nations. This Byzantine form is so peculiar, difficult, and artificial altogether as to render it very unlikely to be invented by the architects of such, comparatively, rudely constructed works as those which we here investigate. We find it at St. Sophia's and St. Marc's; but not all through Venice even; for St. Fosca, in Torcello, has the beginning of a dome which shows a strange sort of compromise between the Byzantine and Eastern, whilst that most interesting church, St. Ciriacco, at Ancona, has a dome which is altogether Eastern. I shall allude again to this peculiarity in tracing the history of art from the south.

Then again we find the prototype (we may almost say the original) of Notre Dame de Poitiers, in the earlier church of St. Croix at Bordeaux. We have the curious plan of Moissac, not Angiovine, but more like the southern one of Avignon, and above all, we have the glorious church of St. Sernin, at Toulouse, containing, though in a rude way, all the essentials of the finest cathedral, save and except the clerestory. Five aisles, the centre having a fine barrel vault, a cross plan, with aisles to the cross, apsidal chapels to the transepts, a bold apse with aisles, and five apsidal chapels leading from it.

One cannot help regretting, in looking over this splendid church, and others akin to it, as one does too with the Renaissance churches of the Rhine, that so successful a beginning had not been further prosecuted and well worked out into a distinct style.

Now we come to Auvergne, a curious tract of country, distinct in its natural characteristics from the rest of France. It was first, I think, brought distinctly under notice in England by Professor Donaldson, and its main features have since been excellently described by Mr. Street. Both papers are amongst the Transactions of the Institute.

Clermont, Issoire, Brioude, and others, are most interesting, but they are so well known from the above and other works, that I will not detain you with them now. I ought, however, to remark, that two gentlemen of great knowledge in French art, Mr. Waring and Mr. Street, differ as to the claims of Auvergne as an art school. Mr. Waring considers it to be altogether indigenous and spreading its influence into the surrounding provinces; whereas Mr. Street assigns its origin to Eastern or Byzantine influence, like those which originated the style of Perigueux and others.

I now come to Provence, the most interesting district in France, to my mind, for Romanesque work, yet in the eleventh century it was scarcely so advanced as we might expect. We here find Valence, Avignon, Arles, St. Croix, at Montmajeur, La Palud, Vienne, and others. These Provençal churches have, for the most part, a cross plan, round arches for the subordinate parts, no triforium or clerestory, the nave being covered with a pointed barrel vault, resting on massive unmoulded ribs. The section of the few mouldings used is Mediæval in some, quite Roman in others. But the ornaments are, almost invariably, traditional copies of Roman. We have too, at Avignon, the dome combined with the pointed barrel vault, and at the picturesque sepulchral chapel of Montmajeur, one of those seeming imitations of such old work as the tomb of Galla Placidia, the baptistery at Ratisbon, or the end of Mayence cathedral, which make us doubt whether so clever a plan be original or not. The Avignon dome is, so far as I know, unique in the way in which the square plan of the dome drum is worked out from an oblong base. No Byzantine architect did that. It is Eastern altogether.

As this eleventh century is an important one in the history of our art, I will take a short review of its main features in France.

In the north we have a style pretty well developed by the Normans, who have left the clear distinct traces of their work wherever their race could find a home, in England and Sicily, as much as in Normandy. They get, so far as I can see, no share of their inspiration from the south. What was not their own was German. Then east, west, and south of this we find but little to remark until we come to the German provinces on the east, and approach Aquitaine to the south.

There we meet at once with the Venetian work as shown at Perigueux, Souillac, and Angoulême; and with the Eastern work as shown in nearly every other dome and in the pointed arches, and with details which show their copyism from the old provincial works of the Romans. I class them thus, for I have not the slightest doubt in my own mind that the use of the dome was altogether a revival that came from the East in the Middle Ages; the form of its pendentives being modified by the Roman architects of Byzantium, and as we see it at Perigueux, but showing their genuine Eastern origin in every other school with which I am acquainted.

It is the mixture of Roman, Norman, Rhenish, and Eastern art which makes the study of French so interestingly difficult, and results in so many picturesque arrangements in plan and outline. In the twelfth century we find art in Picardy and Normandy still Norman, but advanced, and slightly mixed with the pointed arch.

There is little in Brittany worth mention; but in central and northern France there are parts of Senlis, Noyon, Soissons, Laon, Bourges, Sens, Chartres, Le Mans, and St. Remi at Rheims.

In Anjou and Poitou we have the picturesque church of St. Nicholas; at Blois, the cathedrals of Tours and Angoulême.

In Guienne we have the portals and cloisters of Moissac, La Cité in Perigueux, &c.

In Auvergne, great part of Le Puy, &c.

And in Provence, the portals of Tarascon, St. Trophime at Arles, &c.

You will see by the above list that we are now in the era of great churches. Not that the great cathedrals were finished as we find them; but each has remains enough to show that those who first designed them were twelfth-century men at the latest, and that their designers meant them to be of the vast proportions which they assume now.

We find that the nave of Le Mans was then built of its present size, because the outer walls and arcades are original. Bourges, also, was designed to be of the same extent as we now see it, for the north and south doorways are of twelfth-century date. At Chartres, the great west front is of the same date. The great churches of St. Remi, at Rheims in the north, and Toulouse in the south, were earlier. Still, I doubt whether a more interesting series could be found than we see in ranging from north to south through these great French churches.

The fact of the great size of the churches at this date and earlier seems to interfere a good deal with M. Viollet-le-Duc's theory as to the thirteenth century work. He describes the cathedrals of that date as being rebuilt in consequence of the great and sudden efforts made during the enfranchisement of the towns, their great increase of wealth and population having led to the rebuilding on so vast a scale of their cathedrals. It did undoubtedly lead to their being

* Many of these buildings are very curious. St. Jean, at Poitiers, more particularly so. The mouldings are very carefully worked out, clearly in imitation of the Roman, and so bold and good, that one wonders that the building, as a mass, should be so rude.

rebuilt in a much more *ornate* manner, but the size had been set in the olden times long before.

Start at the extreme north, and we are stopped at once at Laon, one of the grandest as well as most ancient of these works,—almost superior in the beauty of its site even to Durham. It stands on a spur of a long range of hills, with a steep escarpment from the plain, and you ascend straight up the face of the rock by ranges of stairs, one only having no less than 260 steps. The face of the cliff is terraced off and clothed with vineyards, and high above you as you ascend, towering above all around it, and standing boldly and grandly out, with its towers against the sky, stands the grand church of Laon.

I know of no work more beautiful or nobler of the age,—noble in the magnificence of its outline, and beautiful in the richness of its detail. The date is given, in the guide-books, as 1114, and it is said not to have been altered since.

Nearly every arch is pointed, and it is so Gothic in its general feeling, so advanced in many of its details, that it is scarcely possible to credit its date to be so early. M. Viollet-le-Duc, indeed, considers that it was almost destroyed before 1190, and rebuilt *circ.* 1200, and that date quite harmonizes with its present appearance. The shafting to the piers is so delicate in form as almost to be painfully so in parts, those of the nave especially. The mouldings are those so well known in later times, and much of the enrichment is beautifully graceful, though the capitals retain much of the Romanesque in their foliage. The only thing wanting to complete the Gothic is tracery to the windows; and were the church restored in its integrity, or finished as designed, one thing more only would be required to make it almost perfect,—the chevet in place of the straight end. Laon altogether may be described as being thoroughly Gothic in outline, with much more Romanesque in detail than works of the same date with us. It is a marvel in art, and presents a subject well worth the most attentive study. Only a few miles from it is Noyon, almost perfect in plan, but wanting the picturesque towers of Laon.

Farther south, and about level with each other, are Senlis, between Noyon and Paris, and St. Remi, at Rheims, much more to the east, both Romanesque, but St. Remi has strong marks (in its tower particularly) of the German influences which we should expect to find there. Then we find at Paris a still more curious contrast in style and dates, for we have in the earlier parts of St. Denis a great approach towards the perfect Gothic, whereas, within a short distance of it, there remains the church of St. Germain des Pres, built twenty years later, and perfectly Romanesque. This curious fact was brought very prominently forward by Mr. Scott, in his Royal Academy lectures. But still more curious is the history of St. Germain, as told by the writers upon it; for they give clear and positive accounts of the church having been altogether rebuilt in the seventeenth century. I cannot account for these statements, and merely bring them forward as not to be forgotten. The church is well known to me, and I do not believe that any restoration such as this must have been could have been carried out at the date assigned to it, or even now; but, as the church is a most important one, the statements above alluded to should be known.

A little south of Paris we get Sens to the east, and Chartres to the west; Sens Transitional, but Chartres pure Romanesque in its sculptured porch and west front.

A little farther south and we come to the nave of the great cathedral of Le Mans, near Chartres. This, too, is one that requires very strict examination on the spot. The arches over columns have clearly been put in round, the pointed arches of moulding having been introduced afterwards; and it seemed to me, on close scrutiny, from a seeming alteration in the curve of the main arch ribs spanning the nave, that they were put in, at first round up nearly to the apex, and then the summit altered into a point. I have a very strong impression that the whole of this nave was finished at or near the end of the eleventh century, and that we have in it the nearest approach in these parts to the true basilican outline of the nave, it having been altered only as we find it in the twelfth century. A very little farther south and we come on the Loire, to Angers and Tours cathedrals, and St. Nicholas, Blois.

Tours was late in the century, and the earlier part is of well-advanced Gothic. But Angers and St. Nicholas seem much earlier, and present very noteable features. Angers has the bold cross, aisleless plan of Angoulême, but without its domes, the church, of some 50 feet span, being vaulted with high domical vaults, and nearly all the arches pointed: the ornamentation very rich and beautifully carved.

But Angers contains very much of early date of extreme interest. St. Serge, for instance, the choir whereof is said to be still earlier than the cathedral, and yet is designed with an elegance and lightness that make its feeling Gothic altogether. In fact, there are very few specimens of our Pointed architecture to equal it in lightness. Then, in St. Nicholas at Blois, we find the southern dome combined with the northern chevet, the arches partly pointed and partly round, and the dome itself most curiously formed in a half-Byzantine, half-Eastern way. Blois is just at the midway between northern and southern influences, and its architecture is influenced just as we might expect.*
